Notice of inquiry is still open so make your point, the more the better.
I'm not sure if it will make a diff with the current crew in charge
though.

Already did. I remember Mr. Powell making the statement "are hams still
using SSB ? Why?" or something to that effect.

Does he actually have any knowledge of communications or is he just 'there'
??????

Hello....I have a Kenwood TH-78A HT. I need a manual or if someone could scan the basic programing
function for me. This would be greatly appreciated. If you have a manual for sale that would be nice too. Thanks, Viggie

4. Re: Kenwood TH78A info

I don't know the differences between the TH-78A and TH-79A, but the
manual for the TH-79AD is available for download on the Kenwood
website. Perhaps there is enough information there.
http://www.kenwood.net/indexKenwood.cfm?do=SupportFileCategory&FileCatID=5

5. Attn: Canucks! DSP40 Clearance at Radio Shack Canada

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-01 02:28:15 UTC
From: Tom Holden <holden_family@sympatico.ca>
Message-ID: <RsdCa.10201$y77.928617@news20.bellglobal.com>
Source record: 29878
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

The DSP40 digital signal processor/powered speaker, part # 21-543, SKU# 2100543, is being cleared again at CDN$29.99. Check store availability by finding it under
Home > Clearance Outlet! > Personal Communciation at www.radioshack.ca .
Store may ship to Canadian address only.

It's worth this price but not the original list of $99.99. A good accessory for radios without built-in DSP, especially if you listen to ham SSB on 40 metres and are fighting heterodynes from broadcasters. Provides selective bandwidth audio filters down to quite sharp for CW, automatic reduction of multiple heterodyne tones in the non-CW mode, and mediocre impulse noise blanking. Includes speaker, headphone jack, gain control and mounting bracket for car; requires 12VDC.

Reviewed at http://www.qsl.net/n4nc/Feedline/fl95-98/Fljul95.pdf

BTW, it's old stock, probably manufactured around 1995. You can get software to run on a PC to do many of the same things and maybe do some better but this is convenient. And you can spend a lot more (10 times) to get a superior box from Timewave, Sound Engineering Solutions , ClearSpeech.

A political appointee.

"Are hams still using SSB" This is the kind of stuff that is troubling
with this bunch. I Think we may need a regime change.

10. FS. Motorola Service Monitor R-2001D

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-01 12:43:49 UTC
From: mikecarmen <mikecarmen@mchsi.com>
Message-ID: <9ymCa.7218$DV.4768@rwcrnsc52.ops.asp.att.net>
Source record: 29883

Motorola Communications System Analyzer / Service Monitor R-2001D (2002B/HS) This single piece of equipment provides all the needed signal source and metering required for two-way radio servicing including:
It has a spectrum analyzer, duplex generator, scope, decode/encode-DTMF/DPL/PL/2/5tone, volt meter, sinad, sweep generator, dual tone generator, AM/FM/SSB operation, scan operation just to name a few of the features.

This unit works fine and includes the monitor cover and antenna along with some RF connecters and adapters. Will consider trade of Ham radio gear plus cash.

$ 2200.00

11. Re: Broadband Power Line

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-01 13:16:28 UTC

Message-ID: <3ED9FCAC.EDCA6D38@ecs.soton.ac.uk>
Source record: 29884

from http://www.powerlineworld.com/powerlineintro.html

Soon after the first trials of Digital PowerLine in the UK, some unanticipated problems arose. Certain radio frequencies were suddenly deluged with traffic, making it impossible to transmit on those frequencies. BBC, amateur radio, and the UKï¿½s emergency broadcasting service were affected. The apparent culprits were standard light poles. Then it became clear that by pure chance British light poles were the perfect size and shape to broadcast Digital PowerLine signals. This situation posed problems not just because of the frequencies involved but also because anyone could listen in on the traffic. Nor.Web is addressing the problem by proposing to lease the frequencies involved from their owners and offering amateur radio operators a new frequency. Negotiations on this topic are currently taking place in London. The privacy issue has not been fully addressed at this point, besides suggestions that all sensitive information should be encrypted.

Guys if the squelch problem you are referring to is
the squelch not breaking without you turning the
rig on and off and then the squelch not resquelching
until you turn it up all the way, that is a common problem
with a diode on the back side of the squelch pot.

I'm pretty sure it will work with any radio that has a headphone or line out jack. Check the store's return policy - it's probably full refund up to 30 days. If so, buy it and try it with no risk!

Tom

Brian:
It is a pretty decent auto-notch filter. It doesn't do much else but it
will get rid of heterodynes for you. I have used one with my SW8, which is
very similar to the Sat800 and also with my RX-320.

I have for sale FIAMM 12 Volt, 24 Amp Hour Sealed Lead Acid Batteries.
These batteries have never been put into service and they have been kept
charged
to maintain their capacity. They all will be checked out and fully charged
before shipment.
They are great for portable use. I am running a 2 meter rig off one and my
Icom FT-857 off
another. At 24 Ah capacity they last a long time. I have several of these
fine batteries
for sale for $15.00 plus $13.75 shipping in the lower 48. If you want to
read more
about them, click on my Web site below and then on Fiamm. Thanks, Charlie
Hugg,
K5MBX

It must have come from that term "full duplex mode". I always wondered why they called diplexers duplexers. Good to hear you out there, Dale!

Pete

> Thanks again, BMC

I cleaned out one store of the two they had.

Service Manual, schematics and well-documented modifications to make minor improvements to perfromance can be found at http://www.geocities.com/n2cbu/

Test results at http://www.rdrop.com/users/billmc/DSP40 show audio selectivity ranging from almost 3000Hz widest to 300 Hz narrowest at -3dB, steep skirts and 50dB notch depth. It's a pretty good audio filter.

Good luck with it!

Tom

Dean:
The Ranger should be more than adequately stable as it was designed from the factory. Mod's for the Ranger were never really necessary for the purpose you stated. I would guess that age has crept up on your rig and that therein lies the heart of the problem. If you're versed in vacuum tube electronics then it should be a simple matter of trouble shooting and correction. If not - try to find an old timer who would be willing to look at it for you. At any rate, I would suggest attempting to fix what you have - rather than modifying what, when working correctly, would probably serve you very, very well. Best of luck.

Roger is on target. You will likely find that the NPO caps in the VFO have
aged and become useless.

Another trick that I did on a Valiant was to install a seperate filament
transformer and run it 24/7 on the VFO tube only. Helped quite a bit.

Kantronics KPC-3 Packet Radio TNC.....$100 plus shipping

This unit has version 5.1 firmware. The unit works great and is in
excellent condition. Includes the manuals and a copy of
the software disc. If you are a Mac user, I can help you with Macintosh
software. Does not include cables or the wall wart
power supply. This will also run off of a 9 volt battery so you can use
it with a laptop and run portable packet radio.

Message-ID: <3edba656$1@news.swissonline.ch>
Source record: 29764

As soon as I switch on my Yaesu FT-26, the display shows the number "1.100".
It is not possible any more to select frequencies and so on.
Is it possible, that this is due to the fact that the internal lithium
battery is empty and has to be replaced?

Justus

42. WANTED ! HT1000 / VISAR MICS (Cords, Mic Plugs)

Newsgroup: rec.radio.amateur.equipment

WANTED ! HT1000 / VISAR MICS (Cords, Mic Plugs)

HI:

I am looking for any quanity of HT1000 , Visar
Series Mic Plugs.

Only need the ends that mate with the Radio, so
if you have some Mics with damaged Mic Cords,
Shell Hosuings, missing clips, I can turn them into

CASH for you....Or I have lots of stuff to trade.

Please email me with what you have.

Monty

43. What frequency and power should I use in this situation?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-02 21:13:56 UTC
From: achilles03@hotmail.com
Message-ID: <fef44ceb.0306021313.15850b4c@posting.google.com>
Source record: 29766

I'm engaged in a balloon project that'll be transmitting location coordinates via CW. However, I'm very new to AR, and have yet to even take the test (next weekend). I'm still debating what frequency and power output I'd need, and I was hoping to ask for some more experienced advice...

In a nutshell, I want to be able to hear CW when it's transmitting from only 5,000 ft and up to 40 miles away. I believe this would still be line of sight...

My first "guess" is to use the 6m band with a power output of atleast 1 watt. Does anyone have any better suggestions of advice to offer? Cost and weight is another issue... hopefully, whatever transmitter I use would ideally be under 1/4 lbs.

Also, whatever freq and power I'd end up with, it'd be 'nice' to have a COTS PC-board type transmitter, but I'm not scared of breaking out my soldering iron either.

Thanks in advance for any responses...
Dave

44. Kenwood R2000 and R5000

Newsgroup: rec.radio.amateur.equipment

I wouldn't use six meters. It tends to skip out, especially in spring and summer months.

Some of the higher bands would be a better choice. Two meters or higher would probably do fine. But make sure you put it where a 'beacon' belongs. Check the rule book on those.

FWIW the line of site at 1300' is appx 50 miles (old repeater site). SO
5000' is fine. Use a pair of CB's with morse code keys, no license required.

For sale - a couple of Zenith parts

Zenith 6S656 Radio Escutcheon.....$25 plus shipping
This is from a 1942 Zenith 6S656 console that was parted out due to a
trashed cabinet. This escutcheon also fits a number of tabletop units
from 1942. Excellent glass

Photo:
http://members.cox.net/radiostuff9/zenithpart.jpg

Zenith Portable Radio Wavemagnet Antenna - 1940's.....$25 plus shipping
This goes to many models of early 1940's Zenith Portable radios This is
in excellent condition and has been tested on my 1942 Zenith portable.

Photos:
http://members.cox.net/radiostuff9/wavemagnet.jpg
http://members.cox.net/radiostuff9/wavemagnet2.jpg

I will ship overseas.

You can check my user ID "n7rk" on Eb*y for a reference as to dealing
with me.

Thanks for looking and 73,

Dave N7RK

From: Ed Mellnik <ed@emavideo.com>
Message-ID: <3edbeac7$1@nntp0.pdx.net>
Source record: 29772

I am the original owner of an IC-970H. This is a dual band ALL-MODE
satellite base radio. It does 50 watts on 2 mtrs and 35 watts on 70cm.
Unlike the Yaesu 736R, this radio receives simultaneously on two bands and
is
a TRUE dual band radio.
This is the Cadillac of Satellite radios. It has never left my shack since
I bought it seven years ago. It has extra cavities for
optional plug ins for 50-905 receive, 1.2 transceiver all modes, 2.4 all
modes. I Do not have any other modules for it.
I did put one tone decode tone squelch board in on the two meter side.
The radio is immaculate and works perfectly. I have decided to sell to
come
up with money for my trip to Europe this summer.
Comes with manual but no microphone. Original Box.

$1200 plus shipping. or make offer

Pictures available on request

Yes, they are a great radio. You can get them cheap and when they die
just toss it in the trash.

Another idea is to get a Motorola GP-68 (you can find them on ebay).
The is a VHF or UHF unit that MOT sells outside of the US. It is 1 watt
or 5 watts selectable and keyboard programmable.

Good luck.

FTBasic V2.1.5 is now available at

http://www.g4hfq.co.uk/download.html

Existing users need to download ftbexe.exe
New users need to download ftbfull.exe

The most visible change is support for the FT-857 - for both CAT control and memory management. There are also numerous other improvements in operation that are applicable to all of the rigs supported, which are:

TRX: FT-100, FT-817, FT-847, FT-857, FT-897, FT-1000MP Mark V
RX: FRG-100, VR-5000

Hi:
I have no interest in radios, but I work in a group home for
adults, and one of the residents is very interested in them.
At a ham fest, he just bought an old Icom IC-22a. He said it was just
like his dad's. He says its a 2-meter, with crystals.

3 Questions:

1. how old would this be, approximately?

2. what size power supply should he use (assuming it even
works!)

3. is there any other newsgroup where this question would be
better asked?

(I went to the ICOM website, but couldn't find any info, even in
the old archives section.)

Thanks!

I bought one used circa 1975 so I'd guess 30 years or so old.
>
> 2. what size power supply should he use (assuming it even works!)

It prolly works; they were pretty bulletproof but very limited by
today's standards. It requires two crystals per "channel" and it'd be
cheaper to buy a newer radio than a full set. Also, many repeaters now
require "PL" tones and this radio doesn't supply them. IIRC it put out
10 watts so a 12 volt 7 amp power supply would do nicely. However,
please remind your friend that this is not a CB - that he needs at least
a Technician class FCC license to transmit on it. If he does not have
one I'd recommend he go to <http://199.245.125.13/ham/index.html> and
try the practice exams, study til he can pass, then take the test. He'll
be glad he did.

Also, you might ask a local Amateur Radio Club(s) to give a
demonstration at the home. Might be fun for everybody and give residents
a new hobby.

Is the meter a cross-needle meter or not. If it is not, you will need to get a manual for the 941D or older version. If it is not a cross-needle type, you have to calibrate the readout before actually reading the swr. Unfortunately, I sold mine and the manual last year so don't remember the exact procedure.

Dee D. Flint, N8UZE

65. Needed: FT-5100 manual

Newsgroup: rec.radio.amateur.equipment

Hi Jim,
While it is a nice radio, you can pick up the FT2500, with the
same performance for a good deal cheaper than that. I purchased my FT2400
at a hamfest last year for 100 dollars, but the fellow was a smoker, and it
did need some cleanup. Still, 125 dollars is about tops for that rig; I
think that the FT2500 can be bought brand new for 150 dollars, but even that
price may have been reduced. Probably about now, the Lithium battery is
needing replacement. At least you are nice about it!
If you are in the Chicago area, you might want to consider the Wheaton
hamfest, this Sunday.

Pete

Hey folks!

I have come accross a stash of Trio (Kenwood) TA-100WA, TA-200WA, and TA-80WA. They are marked "Pure Complementary Power Amplifier".

They were given to a friend, and he was under the impression they were audio amplifiers...?

Does anyone know a source of information and/or datasheets for these parts? I have quite a few of them, and would like to put them to use!

Thanks for your help!

I used to run one off a 4 amp supply I built. Never had any trouble,
but in that specific case , it was actually a IC-22U, which is the
same thing with thumbwheel tuning. They also made a IC-22S, which
was diode matrix tuned. I never had that one. But I did have an "A"
and a "U". Those radios have very good receivers. Have 5 helical
resonators, and are pretty clean intermod wise. But like you say, no
tone...That could be a problem these days, but you could add a tone
board I guess. MK

I think the 22S was a big standard. Everybody making HEX sw. mods. The
22S had high idle current because of the synth. current draw. Bosth were available
during that period.

I had one for a year then got a Wilson WE-800.

Hello folks!
I have an ECONO TUNER ET-1 made by AEA.
Right now the swr and watt meter doens`t work properly and I can't read my
the swr and watts output.
What I have to do? The cross needle meter it's the same for the MFJ949E.
Maybe I can replace the meter with a new one, but where I can find one?
Any manual or schematic available for the tuner?
Thank you
Edmondo

```
Junkbox Surplus Parts for Sale as of 05/31/03
=============================================

NEW ITEMS

I have 200 excess pcs of 5.000 Mhz crystals. These are the miniture
crystals like you see in the latest QRP Quarterly. Tiny round
crystals with two wire leads, I think I've seen these in watches. If
we ever get 60m these could be a lot of fun.
50 for $4.00 shipped to the USA.

I have 400 pcs of 102J (1000pf) Shinyei ceramic caps rated at 630
VDC. These are in bags of 200.
$5.50 for 200 including USA shipping.

I have surplus 50K 1 Turn linear taper pots, about 25 each. These
are chassis mount pots with the nut. About the size of a nickle, and
about 1/2 inch deep with a 1/4 inch shaft about 1/2 inch long.
5 for $5.00 including USA shipping.

2.5/5.5mm Coaxial Power Jacks for PCB insertion or Manhattan install
10 for $2.50

285pf Green Square Plastic Cap, PC Board Insertion 10%
100 for $4.00

220pf 5% 63V SMD Caps - Surface Mount size is 0806
50 for $1.00 PLUS you must send a SASE for return.

Odd Items
============
9.8304 Mhz Crystals, 1/4 in tall - 20 for $5.00
27mH inductors with radial leads - 25 for $3.50

Caps - All new, old stock. No pulls.
====================================
All caps now 50/$3 or 100/$5
====================================
8pf NPO Ceramic - Loose
11pf NPO Ceramic - Loose
12pf NPO ceramics on tape
22pf Kemet Ceramic Caps, 200v, 10%
150pf ceramics, 100v, 10%
470pf Ceramics on paper tape, rated 5% (NPO)
560pf Kemet Ceramic Caps, 200v, 10%
1000pf blue mono caps, 10% 100v
3300pf Kemet Ceramic Caps, 100v, 10%
```

.01 uF ceramic caps, 10% 100v brand new by Kyocera
and
.01 uF ceramic caps, 20% 50v, new old stock, not used
50/2.50 100/$4

Voltage Regulators
==========
L7805ACV voltage regulators TO220 case. 10/$5 or 15/$7 100/$30
LM7812 voltage regulators. TO220 case. 5/$4
LM317T Adjust. Positive Voltage Regulator TO220. 10/$5.00 or 15/$8.00
LM78L62ACZ Volt(6.2)regulators, TO92 format 5/$3.00

Transistors - New Parts - No Pulls
==========
TP2222 plastic TO92 NPN (House brand 2N2222)50/$4 100/$7
2N3904's plastic TO92. NPN - 50/$4 100/$7
2N3704's plastic TO92, NPN - 50/$4

Op AMPS
==========
LM386N-1 - Audio Amps 5 for $3.00

LM741CN - Single Op Amp, 8 Pin Dip, 6 for $3.00
http://www.hep.ph.ic.ac.uk/~hallg/Instrumentation/Data/LM741.pdf

Diodes
======
1N4148 - You always need these. 100 for $2.50

Let me know if you're interested. All prices are post paid to the
USA, unless otherwise noted. I will ship to non USA addresses but we
need to discuss the shipping charges first.

I have for sale FIAMM 12 Volt, 24 Amp Hour Sealed Lead Acid Batteries.
These batteries have never been put into service and they have been kept
charged to maintain their capacity. They all will be checked out and fully
charged
before shipment. They are great for portable use. I am running a 2 meter rig
off one and my
Icom FT-857 off another. At 24 Ah capacity they last a long time. I have
several of these
fine batteries for sale for $15.00 plus $13.75 shipping in the lower 48. If
you want to
read more about them, click on my Web site below and then on Fiamm. Thanks,
Charlie

From: W4UDX <w4udx.nospam@juno.com>
Message-ID: <1yRDa.54844$Wh6.16393@fe02.atl2.webusenet.com>
Source record: 29726
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

The following Items are for sale or will trade ALL for an Icom IC-706 (you pay all shipping):

Yaesu FT-107 HF station:
Ft-107 XCVR, built-in PS, no DMS unit
SP-107P external speaker + patch
YM-34 desk microphone
Owners and service manuals
Works great, very clean, cosmetically has some wear (7.5 to 8)
Carrying handle plastic end-caps are missing but handle works
$300.00 + shipping

Kenwood TM-2550A 2 Meter mobile station:
TM-2550A 45 watt 2M FM XCVR
(Makes a NICE base radio)
Optional tone board
Optional DCL board
Original up/down hand microphone
Quick release mobile mount
Original boxes and manuals
Everything works great and is in excellent shape
$100.00 + shipping

Icom IC-229H 2 Meter mobile station:
IC-229H 45 watt 2M FM XCVR (very small!)
has memories and tones
original Up/Dwn TT hand mic
Original boxes and manuals and mount
Has 2 new LCD panel lamps just installed and includes 2 spares
very good condition and works great!
$100.00 + shipping

Yaesu Ft-209RH 2 Meter HT station:
Yaesu FT-209RH 2M FM Handheld XCVR
optional tone board
MH-12 speaker/mic
Big a!! Periphex NiCad battery (has no "memory effect")
MFJ thin rubber antenna
NC-15 drop-in charger / DC power supply
Quick reference programming manual (not Yaesu published)
Very clean, good condition, works great
$75.00 + shipping

Or trade all for an Icom IC-706 transceiver
must be in good to excellent shape, working correctly in all bands/modes and

include hand mic, optional tone board, DC cable, original manuals and box.
OK if it was used mobile, but not if it's beat all to he$$, and no smoker's
radios please. If interested in trading, email me quickly before I change
my mind!

Thanks!

You'll have to write your own software. Thats the fun of using linux,
write some code and release it under the GPL -- great stuff, and good luck.

112. Technically legal?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-06 19:15:54 UTC
From: Ken <cprstn54zz@att.net>
Message-ID: <o8p1ev4dnjr8sbnbch5l0536qa2p4nc9ki@4ax.com>
Source record: 29735

I found a cheap 3-way co-ax switch on the web and ordered a few.
Seems I ordered from a CB retailer. The catalog he put in the box is
interesting. No band or power specifications for the radios, which
look enormous for 4 watt output. Amps similarly unlabeled as to band
and transmit power but sucking a suspicious 30 amps at 120 volts.

On one list of used and new, he says that he is selling
non-functioning 11 meter amps (to a kilowatt) and non-functioning
XCVRS (to 100 watts) for parts only and that even items identified as
new have been disabled -- to satisfy FCC rules.

Does this dodge really work? That is -- assuming he actually removes
a few simple components and the thing doesn't work -- are any laws
being broken by selling and buying these "parts"?

I may be wrong, but it is my understanding that so long as the transmitter is disabled from operating illegally, it is legal to sell them. As you know, receivers aren't required to be licensed. JMS

got a good point there! But for the record, you know, those who "appear" squeaky clean, very often are not. Liken it to Wolves in Sheep's clothing. Many of your Clergy show a good example. They are least suspected, but now, sex scandals and ripping off of the monies is a very open subject. I'm sure Martha was a nice lady and smart, but not sin free. IF she is innocent, a jury of her peers will find her as such. JMS

Remember also that the USER is the one most in trouble with the FCC,
many of these oufits skate the edges of what is legal, and can
reconstitute under a new name periodically as needed.

These dodges work long enough for them to make some money and move on.

There is an amazing amount of utterly illegal equipment for CB use,
which is why CB is pretty much useless, as well as the nearby bands
the illegal people have decided to expand into.

Happy trails,
Gary (net.yogi.bear)

Thanks for the info! It looks like they have a 4-5W 2m kit. Have you
heard any good/bad feedback about their products? (I'm still new to
the field).

Thanks,
Dave

120. FS: TS-50 w/AT-50 Tuner

Newsgroup: rec.radio.amateur.equipment

Nice clean Kenwood TS-50 that I used in my motor home, which is being sold. Current new price is $650.00 and I'll let this one go for $450.00 o/bo plus shipping. Radio is modified for MARS.

I also have the AT-50 Tuner that goes with it; but, its not working properly. It sells for $329.00 and I'll sell it with the TS-50 for an extra $100 plus shipping..

Tom

Source record: 29744

Mint condition Kenwood TS-450 SAT to be mailed in original box $650.00
plus shipping.

Matching TS-53 Power Supply can be included if bought with the radio for
another $125.00 ---most of these sell for about $175 used.

And if you buy both of the above I will include the 'matching' external
speaker as a bonus. .

Radio has extra filters and is modified for MARS.

I bought a new Yaesu FT1000MP and even though its a great radio, the Kenwood
TS-450/SAT with its filters hangs right in there with it under the bad
conditions we've had this past month. Its a great radio.

122. FS: QRO HF2500DX Amp w/QSK

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-06 23:46:34 UTC
From: Tom <tomhob@overland.net>
Message-ID: <3ee128f7_7@corp.newsgroups.com>
Source record: 29745

This QRO amp is fabulous and in mint condition. It has 2 SVETLANA 4CX800A tubes, a huge power supply; and it is warranted to run max limit output all day with the key down. Can be easily adjusted for any power output. Has been configured for 10M. Full details are at the QRO homepage http://www.qrotec.com/

This QRO legal limit amp sells new for $3145.00 w/QSK plus shipping. Asking $2500.00 I will ship and include 2 extra 4CX800A tubes. I've never needed to replace
one; but bought these direct from Russia on ebay as a backup if I needed them.

Reason for selling, I have an Alpha Power 87A amp.

Help. We have Motorola MDM 9600 baud radio modems tied to a licensed 800 mhz radio system. We want to be able to communicate between systems with Tcp/Ip. We currently pay a lot of money to a software company to do this using different protocols and I know its not that complicated. I am looking to PAY $$ anyone who is interested to provide us a solution or help us to overcome this leap. I know that once I can get them talking in tcp/ip a lot of our limitations will go away as I am a software developer. I just don't understand packet radio systems.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3028167807

Ends Jun-08-03 15:21:47 PDT

I believe this called a FT-171 holder (?) - it looks like a regular FT-243 on steroids. 7026.5 kHz should put it in the usable c.w. portion of the 40 meter band, just high enough in frequency to by used by Generals. It would look very nice in a piece of vintage-style homebrew gear.

Thanks for looking,
Tom - "theponyengine"
N&#65533;JMY - AAR7FV

Hi,

The Oki MSM5524 is both a Display and Frequency Counter widely used in FRG7700 and R1000.

I managed to save a couple of them during the early 90's and they are still in good condition. Each IC will cost US60. They were bought as spares when I previously repaired my R1000. Hopefully, it may help to solve your malfunction display.

I can email you a softcopy of the R1000 schematic as well.
Let me know if you like to have the chip for repair or spares.

Thanks and Regards
wor
Singapore

<< I had the reset regulator for the micro go bad in mine. It is part of the removable head. L78LR05BFA was the generic part number. Kenwood only sells the whole head as an assembly. I found a parts dealer out west who stocked them and I replaced it. It requires dissasembly of the LCD which is dificult to say the least . >>

Bob-

Thanks for the hint. I studied the diagrams of the control head circuits, and decided that my problem is most likely not related to the L78LR05BFA. It would affect the display, but doesn't seem to be connected to the power-on circuitry.

The power button is connected to one of the interrupt lines on a CPU in the control head. For it to work, the CPU must be running all the time, even when the radio is turned off. I haven't had time to disassemble things to see if voltages were reasonable. Perhaps one is marginal, and the other radio feeds it a slightly higher (or lower) value that allows it to work.

There is also a possibility that Kenwood made some undocumented modifications to the newer radios, to make them less likely to have the problem. I'm not sure how to find out about something like that! Since no one has volunteered a definitive answer, it is probably not a common problem.

<< I'm engaged in a balloon project that'll be transmitting location coordinates via CW. However, I'm very new to AR, and have yet to even take the test (next weekend). I'm still debating what frequency and power output I'd need, and I was hoping to ask for some more experienced advice... >>

Dave-

Take a look at using a VHF or UHF transmitter on an out-of-the-way frequency, with a GPS unit and a Packet TNC with APRS firmware installed. It would seem to perfectly fit your needs unless you planned to use some kind of inertial guidance system to supply your location information.

Some information on APRS is available at http://www.aprs.net/.

For sale, Sony ICF-2010. Very nice condition, from my shack. FM/AIR/LW/AM/Full SW coverage to 30 megs. ALSO SSB/ mode. Antenna is straight & unbent. No bumps/bruises. Comes with EVERYTHING that came with the rig, when new, except for the owners manual. Can't find it. (boxes, AC adaptor, etc, etc, I have & are included with the rig) I just can't find that manual. Rig works fine on all bands.
Price $225. plus some help with the shipping. You can call or shoot me a note.

FS: Like New Icom IC-775DSP

This radio was a backup to my IC-781 and has had very little use. It looks like a new unit. The serial number is 01637 and it has at least one optional filter and one other optional accessory (the high stability crystal oscillator, I believe). I am asking $1995, shipped in continental United States. Thanks and 73!

<< Common problem. Resolder R121 in the control unit. >>

Cliff-

You may recall giving the same advice to solve another problem a few weeks ago. The radio would come on and appeared to work, but there was no RF output and no signals were received. I found that R121 had little or no solder at one end, and little more at the other, on BOTH the TM-742 and TM-942. I followed your advice and the original problem went away on both radios. I also resoldered the associated power transistor collector, Q102?

The new problem appeared after I had buttoned everything up: At first it was OK, but soon the TM-742 would not turn on when its power button was pressed. Since the radio is several years old, I replaced the lithium battery, expecting that to solve the problem. The first couple of times I tried, it powered-up OK, but then stopped working.

By swapping front panels with the TM-942, each radio will respond to the power button. Swapping back, the problem returns to the TM-742. I tried several swaps to be sure.

I'm fairly sure the R121 repair was successful. Can you think of anything else that might prevent the power switch from working?

For Sale: R-1051 receiver in working condition. This digitally tuned receiver was the replacement for the R-390 series of receivers and covers 2.000 to 30.000 MHz, AM, CW, USB, LSB and ISB using mechanical filters. There are two tubes; the rest is solid state. Built-in frequency standard and oven. Non-original panel lights. With some documentation. This is heavy - around 75 pounds, and built like a battleship. Prefer pickup near Oxnard, CA or will deliver up to 50 miles. $100.

197. Kenwood TH-F6A v.s. Icom IC-T90A

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-09 23:35:50 UTC
From: Evan Platt <evan@theobviousespphotography.com>
Message-ID: <em5aevkjdt9gb6a8u35rvtf3av2ndnvl0s@4ax.com>
Source record: 29520

I'm wondering if anyone's done a side by side comparison of the Kenwood TH-F6A v.s. Icom IC-T90A? I think I've narrowed down my decision for my next HT to those two radios. I did a deja and yahoo search, and couldn't locate much in terms of a side by side comparison, so to speak. I think I like the Icom, but the Kenwood dual recieve would be nice, I have a kenwood programming cable, the kenwood software's free, etc. But is it worth it? Does the icom have better reception? My main listening interest outside ham is 488, 856 & 867, and low band, 46 mhz.

Thanks. :)

Evan

Source record: 29525

My grandson - 13, and a bright kid - very interested in ham radio (reminds me of myself 50 years ago). I told him if he passed the tests and was ready I would help him with the equipment. He is interested in mainly HF CW. Passed the Tech exam, and I got him a Kenwood R-599A rcvr. to give his ear a workout while he gets up to 5 wpm on the computer. That will be soon, and it looks like it is time to get looking for a HF transceiver. I guess this question has been up here a zillion times (I have looked) but I thought I would give it another try. Given his interest in CW (fed by stories of great gramps and etc. in the Pacific in WW II) looking for a rig that would be best adapted to that. Something new enough to have some reliability, old enough to be cheap and give some knob twiddling. Maybe Drake R-4 series, but looks like collecting has got the prices up. Or Kenwood TS-520/530S, TS-820/830S, Ten Tec Argosy, or..... Helpful opinions would be appreciated. Kid has done good, got me taking the test this weekend so he will have a partner (in crime?)

Thanks to all of the people who contacted me about the R-1051. I fired
it up today and found it to suddenly be as sensitive as a block of wood.
(About 80 microvolts or worse.)

I opened it up for the first time and replaced both tubes to no avail.
I'll have to do some digging now. I'll either fix it and relist it or
list it as a parts unit.

John

From: Dick <rhughes33@cableone.net>
Message-ID: <8naaevgg3o1u185of9c0jdm1vnp6jk8s78@4ax.com>
Source record: 29522

The two radios aren't really comparable, other than they are both HT's. The Kenwood is more expensive because it has more capability, including SSB receive. 6-meters seems a waste in an HT, but 220 can be highly valuable in an area of 220 repeaters. I think you have to make your choice based on band coverage. BTW, almost all of my radios are Icom's, so I am not knocking the IC-T90A.

Just a suggestion but why not try the Elecraft K2 kit and then he can have the fun of building it to get on the air. I haven't tried one but in the last issue of QST they seemed to be popular by many of the QRP contesters.

Stephan -- the TS-830S is very worthy as it has a built in power supply, covers the WARC bands 12, 17, 30M and is considered by many as one of Kenwoods finest. Mostly solid state except the driver and finals and the vacuum tube finals are very forgiving and long lived. Has great receiver -- not synthesized but analog with digital readout. With filters makes FB CW rig.

Since 30M is a CW band only and is likely to be open during the decline of the sunspot cycle (10M, 12M, and 15M will be poor) I would be sure his new rig has the WARC bands with 30M. (TS-520 does not)

CW ops here like the TS-940.
FB on the coaching.

For reliability I would not go with a 20 year old tube type radio.
When I got back into Ham radio, I found that an Alinco DX-77T is a
tremendous deal.
CW keyer built in
CW filter built in
Split operation.
About the same dollars I spent on my 520SE 25 years ago!

Watch out, some people are selling a stripped down model (not the -T) that
omits the Keyer and the CW filter.

He already has one, I'd bet.
And what is your basis for saying ham radio is dead?
The U.S. ham population is 637,404 according to the ham census. I think it's increased over past
years (however I have no trend data to back that up), because of the plethora of choices of getting
into the hobby.

I'd suggest a Ten Tec Argosy or a Triton I, II or IV. The Triton I and II have a cw filter standard; you'd want to make sure such is included in the Argosy or Triton IV. I know that these don't have WARC band coverage (Argosy has 30M), but Ten Tec still supports these rigs should maintenance be needed. One caution though about the Argosy - I think replacement final amplifier transistors are VERY difficult to obtain.
It's great that your grandson is interested in amateur radio and I think there a couple of websites directed at young hams. I wish him a long and happy experience with the service/hobby.

Hi, I have an old 2m. mobile radio of subject model that has served me well for many years. However, now the microphone element finally died, and I replaced it with one from another old mike. This replacement is clearly not ideal, its output is too low. Can anyone point me to the "micr. gain pot" , since my original manual is long lost, and there doesn't seem to be any available for download from the Kenwood web pages. A scan of the page in your manual attached to an email would be greatly appreciated. Thanks & 73.

Since he's a CW hound, why not try the Ten Tec web site? Look around,
and find their page for used equipment. Email them to send you their
current list of used Ten Tec rigs -- they usually have a coupla dozen
in stock. They come with a 30 day guarantee, and the factory has parts
and service for any rig they have ever made.

My other suggestion would be a used rig from the Icom 706 series. DC
to daylight coverage -- lots of listening/messing around for a curious
13-yr. old.

The Icom is 6m 2m and 440, wide band reception, and apparently can be
modified to transmit on 220 with a mod.

The kenwood is 2m 220 440, and recieves 6m. So basically, my main
'decision factor'wil be reception. I'll go and compare them, but just
wondering if anyone had real world experience. 30 minutes at HRO
doesn't compare to a few hours of real use. :)

Evan

Hey, it works for Ameritron and other legitimate manufacturers of Ham gear. Show them a license and they'll tell you how to modify their amp to work on 10 (and 11) meters. In some cases the "mod" may be so easy that even a typical Ham could do it (c:.

Personally, I wouldn't provide him with a radio that doesn't
cover 24-year-old bands (WARC-79 - sheesh, that's nearly a
quarter of a century ago!).

Same thing for a commercial antenna (although, for a keen
13-year-old, making an antenna would be my first choice, over
anything store-bought).

My $0.02.

-Gord

On Ebay

TM-2570A Feature-packed 2m FM transceiver. Here's what you get: TU-7 Tone Unit MU-1 Modem Unit (rare find!) VS-1 Voice Synthesizer Mounting Bracket and original mounting hardware. That is all the options which were available for this radio.

The fcc has odd "feel good" rules just like most other laws. In the US anyone can buy any power transmitter or transceiver there is. YOu just can not use them to transmitt with where you need to have them type accepted. It is just that in the roughly 20 to 50 mhz range you have trouble with just the seperate amplifiers.

239. Ground question

Newsgroup: rec.radio.amateur.equipment

Source record: 29562

I'm setting up a couple of HF rigs in the basement and at the moment I'm using the cold water pipe for ground, this might sound like a real dumb question but if I were to use a rod thru the bottom of my sump would I cause any damage or is that actually below the foundation? Has anyone tried this? I figured since is always wet it would make a good ground.

Gil

Gil-
The ground (earth, dirt, soil, sand, etc.) below a sump pump should
be gravel for a few inches, then dirt. i.e - the basement was
excavated, gravel was laid in, then cement was poured over the gravel.
But the question is - why do you need such a ground? If for safety,
then the cold water pipe is ok. If for lightning protection then you
need to tie that ground to the house ground, and probably consider
other things as well, such as surge suppressors.

Generally, it is best to use a single ground point for everything. In
most construction, the metal cold water pipe is the preferred point.

Last year, we had the main electric panel at my mother's house, early
60s vintage replaced (breakers beat screw-in fuses). As part of the
job, they upgraded the ground from that box by running an 8 or 10
gauge wire from the panel in the garage into the basement all the way
to the water meter.

Happy trails,

Just trying to find the best overall ground system for RF purposes.
My antenna is a random length wire into a tuner which requires a good ground
and also trying to cut out some phone interferience and TVI.

Thanks ....Gil

245. Yaesu FT900 Tuner Mod

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-12 05:41:59 UTC
From: Max <ve3tmt@yahoo.ca>
Message-ID: <esUFa.12307$h7.1493435@read1.cgocable.net>
Source record: 29568

For those interested, I have completed the mod that puts the FT900's internal tuner in line during receive as well. This mod has been performed and documented on my Kenwood TS850 and thought I would try the same approach with the FT900. It works as expected, with no problems encountered. If anyone is interested in the write up for the mods, e-mail me direct and I will forward the info to you.

Cheers,

Max ve3tmt@rac.ca

Source record: 29570

I have for sale a like new Kenwood TM-2570 2 meter Transceiver. This is the 70 watt version of the top of the line Kenwood FM transceiver. It has been used very little, and comes with the hard to find TU-7 Tone board installed. The dial lights all work and are original. It comes with the original box, manual, handmic, and power cable. This is a really nice transceiver. It works great and I get a lot of compliments on the audio. Price is $175. Thanks, Charlie Hugg, K5MBX

252. ICOM2100H/HM-95

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-12 15:52:09 UTC
From: "Harold E. Johnson" <W4ZCB@mchsi.com>
Message-ID: <Jk1Ga.963193$Zo.218129@sccrnsc03>
Source record: 29575

I have an HM-95 DTMF mike used with the ICOM 2100H. I want to use the mike in another application, and have the microphone connector wiring diagram.

Applying the 8 volts for the DTMF chip, does not bias the mike element. Adding an external resistor to bias the element, I get audio from the mike, but it kills the DTMF tones.

Anyone with the schematic for the audio input stages for the 2100H ? I'd appreciate a .PDF or a .JPG or even a hand sketch of how in heck they use the thing.

TIA.

Not as pronounced as on my 850 Rich, but I've never been known to use resonant antennas! When I first turned the rig back on I thought it was brke. But as soon as I hit the tuner button the rx came alive. I do notice an S unit or two difference with the tuner in or out. The mod itself is actually very easy. The most time consuming stage is getting the darn FT900 apart.

My picks for economy and not old crap.

Best buy these days IC718 comes with DSP
Used about 400-475 new 599.00 have seen cheaper new.

Can always go QRP with the FT817 has all bands and can really teach um how
important it is to have a good antenna system.

FT840 DX77, DX70TH, Of course you can always go with a Old Swan or SB101.
Can pick up a Swan 500 in good shape with PS for 200 bucks. Heck almost 300
watts on it too.

Of course, he would have to consider Echolink as Ham radio..... ;^)

something like an Icom 745 is not too bad a radio. Big enough to look like something, but won't take up the whole desk or table. It has a lot of knobs too, so it can keep him busy.

No, looking in the latest AES catalog, the widest optional filter for
the 857 is a 2.3 khz Collins ssb filter. No AM filter listed.

Carl---Sounds like you know all about the IC211 PLL board problems...if you can't find one you might consider letting Scott Malcom take a crack at it. He has repaired my 211 that I bought in 1977 a couple of times and rebuilt the PLL to rid it of those nasty problems. His rates are very reasonable and quick turn around has been my experience. Here's his web page:

The mic bias is simplex voltage on the mic line. So you will have a
separate 8 volt line likely running the DTMF chip and about 8 volts on
the mic line too.

I used to have one of those. If memory serves me, that unit does
NOT have memory when power is removed.

Hi Gary, and thanks for the response.

I guess I don't know what you mean by simplex voltage unless you mean that the DC voltage is diplexed or superimposed on the mike audio. I understand that, and am providing 8 volts with some current handling capability to run the DTMF chip, and additionally run that 8 volts through a 5 K resistor to the mic element for bias. (Other side grounded). When I just feed the DTMF chip, I can get the tones out of the mike leads but the mike is inoperative due to no bias on the electret element. When I bias the mic, I can no longer get the DTMF tones. (Still powering the DTMF chip.) Seems to be a one or the other the ways I've tried it so far. Would you by any chance have the manual for the 2100?

Regards

A little Google time brings up mnetion of this rig, and at least one
indicates that there is no backup battery to retain memory when
diconnected from the power source. It keeps memory only when turned
off but powered.

There is no internal battery for retaining frequencies when entered.
The radio will retain info when powered down, but when removed from
the power source, all is lost...

simplex voltage means a voltage is superimposed over the mic audio
line. The manual appears at
http://www.icomamerica.com/support/manuals/ic-2100h.pdf

The mic connection appears on PDF page 7 or manual page 3

I don't remember what Icom used to apply the mic bias so far as
current limiting. 5K might be to high a value.

Pin 1 is 8 Volts input, it is not the mic bias.
Pin 2 is frequency up / down
Pin 3 says no connection, but in reality it is a control connection for the original mic
Pin 4 is PTT
Pin 5 is Mic Audio Ground
Pin 6 is Mic audio out
Pin 7 is Chassis ground
Pin 8 says no connection but in reality it is a control connection for the original mic.

So to get mic audio you need approximately +8 volts across Pin 6 and Pin 7. Then Pin 6 needs to be connected to a mic amplifier stage. Remember the mic also puts a bit of a load on the simplex bias voltage so it might not be right at 8 volts DC when attached to the transceiver.

Pin 5 is an AC coupled audio ground.
I suspect for DTMF you input +8 volts across Pin 1 and Pin 7.

As I remember the HM-95 should be plug and play on the IC-2100H The HM-95 is virtually the same mic as a HM-14 only with a different connector on the mic. So look about the net for a HM-14 mic diagram and that should be helpful. Might also try contacting Icom America and see if they have a scanned schematic of either the HM-95 or HM-14 they could email or snail mail you.

I hope some of this helps. Its been a couple of years now since I did this daily at Icom so I am starting to forget some.

There's a new WinRadio receiver that goes practically DC to Daylight, and
has some really nice features if you want to pay for them. Do a Google
search on WinRadio.

Roger,

At their web site (http://www.kachina-az.com/) they state

"Production of all HF radio products was discontinued in May 2001,
but Kachina will continue to provide replacement parts and warranty
service for the foreseeable future."

An interesting idea they had, but perhaps not economical for them...

At their web site you will find a product brochure, block diagram,
schematics, etc. etc. for the 505DSP transceiver.

Never heard it called anything but diplexed, but I understand what you mean. Thanks for the URL for the manual, but it's just a "How to turn it on" thing and I'd understand it all if they would just put in a couple extra pages and include a schematic of the radio.

>

Yes, I have those pages, Thanks.
>

I've only gone down to 2 K, was using 5 to try to keep from loading the DTMF chip output. Might try 1K, but my understanding of an electret was that it's DC impedance is something like megohms.

True re the DTMF, it works fine as long as the mike doesn't. Hi. I was grounding pin 5, might be my problem right there, will check that closely.

The mike plays perfectly with the ICOM, just haven't been able to do the same thing using it in a little homebrew radio. A schematic of the mike INPUT would help, but I suspect that you have your finger on it with the pin 5 thing.

Mni Tnx

Hi,
I have an Icom 735 transceiver.Yesterday morning when I switched it on,it suddenly went into transmit mode.It shows XMIT on the display but it is not radiating anything.I cannot get it to go back to receive.Any help would be appreciated.Could it be a fault in the Lithium battery or in the small transmit button?
Best regards

You could check and make sure the VOX button is off.

There's also a troubleshooter's guide for the 735 at
http://www.icomamerica.com/support/troubleshooting/ic-735.html

Low DC power supply voltage would also cause that.

Several years ago I went round and round with an owner who insisted
the 735 was at fault. He was using a power supply that was getting RF
into the regulation circuit. When that happened the regulation circuit
would go low, below 12 volts, and the 735 would stick into transmit,
no real RF power was emitted. Got him to try a buddies PS-55 and his
whole problem cleared. A little bypassing on the power supply cleared
the whol;e problem.

This used to happen a lot when the station was on the 2nd floor of the
house and the operator gad a nice 30 foot or so ground wire running
down to the ground rod. Upon fist key up the 735 would stick in TX.

Measure your power supply voltage right at the power connector on the
back of the 735.

It also seems to me we used to loose a diode in the radio but can't
remember which one that caused this. I think either D1 or D2 on the
PLL unit. A quick call or email to Icom America might bring the
answer.

Source record: 29619

I have for sale a like new Kenwood TM-2570A 2 meter Transceiver. This is the 70 watt version of the top of the line Kenwood FM transceiver. It has been used very little, and comes with the hard to find TU-7 Tone board installed. The dial lights all work and are original. It comes with the original box, manual, handmic, and power cable. This is a really nice transceiver. It works great and I get a lot of compliments on the audio. Price is $145. Thanks, Charlie Hugg, K5MBX

Nope - Ch3 Canobolas is a UHF CB repeater in Australia - TX freq is
476.475 MHz, so yes, the relevancy to most of the NGs posted to is damn
close to zero.

I have a W & W Asc. Analyzer III Battery conditioner/Charger. You can buy cups very cheap from them (they are in QST) for you type of HT ham or commercial. Right now it is setup for cellular phones. Nokia, Motorola, Ericson cups. Digital readout on condition of battery. Will charge lead acid, Li Ion, NiCad, Nickle metal hydride too. Excellent condition.

WTT for a Dual band mobile rig. what do you have? Possib. for a Swan 6 meter rig with PS.

tnx

You have gotta be kidding. I totally disagree Huslter is junk to. The problem is you went with comet. Read what people say about them. Go with Diamond much better quality. Try homebrewing one its much better doing it that way. Why be a appliance operator. I built my own HF mobile antenna and 2 meter 5/8ths wave also. I would put them up against any commercial antenna. They are all based on the arrl hand books of the past anyhow commecial and homebrew.

Is that house in the USA?

I cannot imagine what they would have been doing with a #8 or #10
ground wire from the panel to the water meter. I believe the
smallest allowed by the NEC is a #6. Perhaps they ran #6 (about
1/4" diameter)?

Try MFJ. They have the MFJ-1910, 33 foot telescoping mast. List price is
$79.95 us.

> Does anyone have a wiring diagram of this ridiculously priced cable?

If this is the cable offered in the RTS programming software
package, this is not a simple cable, but has RS-232 to TTL
conversion logic in the DB25 plug.

There are resturants in Hollywood you'd love. They charge big $$$ and
insult customers who think "you gut what you pay for".

> The problem is you went with comet. Go with Diamond much better quality.

I have several of both. Model for model they are identical.

> Try homebrewing.

I do, just not mobile VHF/UHF antennas. It's not worth the bother when a
commercial one costs $15.

Source record: 29640

I put in a W&W BP-13 battery pack (Kenwood TH-78A) in my radio and popped it in the charger (Kenwood BC-15). After a while I noticed the red light going on and off. But didn't pay much attention. About 2 or 3 hours went by, I pulled the radio out and it was very hot ! Even the metal back of the radio was hot. I never saw a green light come on. I have another battery that would barely charge through the radio with a wall transformer. Put that in the charger and got no lights at all. Do I have a bad charger or a bad battery ?? I assume the temperature sensor was shutting off the power. After it cooled I put it back in and the red light came on steady. I was afraid it would get hot again so I took it out. Meanwhile, I tried my original battery again. Still no light. Oh boy !

318. Need VFO advice for Kenwood TS-520, 520S

Newsgroup: rec.radio.amateur.equipment

First, thanks to everyone who offered kind advice on outfit for my grandson - looks like in fact we are going to end with 2 Kenwoods - a TS-520 and a 520S (don't yet know who will get which one). One thing I would like to add at some point is an external VFO, and although I have searched until my wrist went numb (brain also) don't seem to be able to get a complete answer. I know the VFO-520 works (of course), and apparently the VFO-820 (digital readout?) also. Wonder what others might be suitable - the 230 was mentioned a few times as working with the 520's - is that true, and other possibilities. Off to the Frederick hamfest on Sunday, and that would be one more thing to be looking for. Thanks

Spoefish

All nice enough for a Dayton fest, but....
For me to pay $8 to park in the handicap area for one day
and still have to walk for ever to get to the front door. harrumph!
Then to cough up another $22 it just isn't worth it for me to
return. Didn't find any of them really good deals but did
manage to stop by and pay up my 10 10 dues for another few years.
I guess the catalog and ebay will be the hamfests for me from now on.

Sorry Y'all 73

So, you believe it is ok for here to screw other mothers out of something
they had set aside for their children. Her actions show her as she is, a
mean greedy person, thinking only of herself. What about those who bought
the stock she sold only to find out the next day it's value had dropped.
Should they eat the losses that the incurred when Martha sold them stock
which she knew was bad?
Give her some time in jail, give her time to reflect on her actions.

> and a 520S (don't yet know who will get which one).

Whoever wants to listen to 160m should use the 520S. :/ The 520 does
not have 160. I've had one of each at different times.

One thing I would like
> to add at some point is an external VFO, and although I have searched until
> my wrist went numb (brain also) don't seem to be able to get a complete
> answer. I know the VFO-520 works (of course), and apparently the VFO-820
> (digital readout?) also.

I've never heard of the 820 VFO working with the 520. That would be a
new one on me. The only other "digi" readout option I'm aware of is
the DG-5. And it's just a readout/counter, not a VFO.

Wonder what others might be suitable - the 230 was
> mentioned a few times as working with the 520's - is that true, and other
> possibilities.

The VFO-230 most certainly will not work with the 520. It runs with
the TS-120?,130,530,830. The VFO-230 is the best of the bunch. It's
PLL and rock solid stable. Has 5 memories and a RIT. It's the VFO of
choice for a 530 or a 830. The VFO-240 is the cheaper L/C external VFO
for that line, and should not be mistaken for the better VFO-230. The
240 is the same as what's in the radio. "L/C"
The 230 is PLL, and much more stable. It makes a 830 feel like a 930
as far as stability.

Off to the Frederick hamfest on Sunday, and that would be
> one more thing to be looking for. Thanks

If you want a VFO, I'd look for the matching 520 VFO. Unless I'm
mistaken, it's the only one that will work with that radio. They have
different IF's among the models. MK

I suggested the TS 520S as a good rig for the money,it is that...using the external VFO is nice too,then you add the digital readout...now you have enough in it to buy something like a TS 440SAT,which has everything in one package, including auto tuner,split freq,AM,FM,100 memories,general coverage etc..Have fun. 73 W4PQW

These poles come in various sizes, from 10ft to about 30ft. They are all very flexible, espically near the tip, so supporting a heavy weight can be a problem.

I believe MFJ sells a 10 meter (30ft) one, but if you want to save some money you can get a 20ft one for a LOT less. All these poles are basically "crappie" fishing poles, so you can save by getting them from a sporting goods supply house.

Cabela's (www.cabelas.com) sells the B&M Black Widow line (item #ID-116438) in sizes from 10ft to 20ft and prices from $8 to $18!

The IC-245 was quite a marvel in its day (late 70's.) It was Icom's first 2-meter mobile radio capable of SSB (assuming you have the SSB attachment on the bottom of the radio.) It covers the entire band from 144 to 148 mHz, with 10-watts out put in all modes (F3, A3J & A1.) It is capable of split frequency operation, but requires a battery backup to hold the memory if removed from power. It has two VFO's. Because it was built before wide-spread use of tone access, you would need a tone encoder board (3rd party) to be able to use a repeater with tone access.

332. VFO Question

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-14 14:44:23 UTC
From: Charles Cosby <charlescosby@execulink.com>
Message-ID: <vemd9l7t1bat5a@corp.supernews.com>
Source record: 29455

I recently purchased an Icom IC-21A 2 Meter rig. It came with 17 sets of crystals but very few of them are repeaters in my area (it came from the west coast and I am in Ontario). I read in the manual that there is (or was) a digital VFO available for it. I am not sure exactly what that does. Is it something to let you tune the frequency so you don't have to use the crystals? If so, do I have to use the one specified or can I adapt a different one to work? Obviously if it will cost too much it would be cheaper to buy a new rig but I would like to keep this one and use it if possible.

Thanks in advance for your help
Charles

Icom made a seperate box about half the size of the transceiver. YOu could plug it into the transceiver and punch in the desired frequencies. I am not sure but as the rig is very old, it may only cover the 146 to 148 mhz range. After 20 years there are probably not very many of those left.

A company called GLB made some units that did the same thing. I built one of their kits about 25 years ago for and older Regency hr-212 transceiver. They may have made one for the Icom. Not sure what the money conversionis now but with the US dollar value of a FM rig being only $ 150 it is hard to justify much in the oler rigs.

It's a 10w (nominal) radio, FM, unless it has the sideband module attached. The "dim" LED may be caused by a sensor. Look below the red and green LEDs on the left. The clear one is a light sensor. Shine a penlight there, and the display should get brighter. Cover it and display should dim.

Note; If you can change frequencies with the knob, you are lucky. Usually the optics that make that happen fail on these radios.

There is a 24 pin connector on the back. You may interface Packet here, or plug in an RM-2 keypad frequency entry pad (avail on Ebay pretty cheaply.

If you would like, send me email at wa2mct@juno.com I could photo copy the manual for you, if it is not available online.

Source record: 29463

Hi, as other have posted, the 520 series needs a 520 vfo other will not work as the IF is different.

for the ts530 you can use a vfo 230 or 240. the 240 is less expensive and need no external power
but has no memories or digital display.

henry radio made a digital display external to the ts 520 series, it is the DFD/K and it
used nixietubes ! It is neat and I have one that came with my used station.

The 520 and 530 are nice radio, easy to fix if needed, please be sure to get operator and
service manuals, makes things a lot easier.

While you are at the hamfest, find a nice dummy load either bird or decibel brand,
many surpluss and at a reasonable cost.

lots of 520 and 530 gear up on ebay if you want to use that service, I have and got very good
equipment from the regular sellers.

be sure to find a nice antenna tuner, the at 200 is great or the at 230 for the ts 530 series,
built like a tank, 200 watts no problem and large knobs to turn.

Yea, I sorta agree. For about the same total price when adding vfro's
, you could get a newer solid state radio that might be more
versatile. And that would let you also run mobile and portable. The
TS-520 will run mobile as it has the 12v pack, but I don't really
recommend it for a mobile. If I were to buy a cheapy solid state rig,
many are good. IC-730,735,740,745, etc...TS-120,130,140,430,440,
etc...All can be had fairly cheap. On the plus side of buying the
520's, they are still very good radios, with very good audio quality
etc. So even if he sinks some money into them, they are decent, and he
can turn them fairly easily if he decides to get something else. Heck,
I think the *best* starter kit for a beginner is a IC-706mk2g for
about $700 new, and cheaper used, but that may be out of his price
range. It will do most everything he would ever want to do though, all
bands, all modes. But I am biased. I own one...:) MK

If I remember correctly the VFO for the 520 runs between 4.9MHz and
5.4MHz. The 820 on the other hand is from 5.0 to 5.5 MHz. I built one
and it was handy dandy. The advantage of the 820 was in the digital
readout. No calibration was required. For the 520 it has to have
the external VFO with a calibrated dial.

Whether the switch arrangements are the same for the two models
I don't know. I just copied the handbook circuit for the 820.

Good luck

Hi there,

Thanks very much for reading.

I have the following problem:

Config:
Laptop Armada 1700 ;

The programs that I have troubles with are MixW, ChromaPix, GetCW and
Truetty.
I input a signal via the soundcard; signal is controlled by microphone
input of mixer (there is just that input).
When I listen over the speakers it sounds ok to me.
But when I use it as an input, some programs seem not to respond toit,
or the signal i see (waterfall or other graphic) is to soft (low).

I know the programs work ok, beacause on my desktop they do.

Does anyone have any idea what I can do?
Is there a hidden setting that can 'boost' the input or throughput?
Or is this often the case with laptop computers???

Any help is bery much appreciated.

Kees

In article <e5hoev82ojbqn17j4r2ka3g4gvsphcdut4@4ax.com>,
antispam@read.in.message.nl says...
| The programs that I have troubles with are MixW, ChromaPix, GetCW and
| Truetty.
| I input a signal via the soundcard; signal is controlled by microphone
| input of mixer (there is just that input).
| When I listen over the speakers it sounds ok to me.
| But when I use it as an input, some programs seem not to respond toit,
| or the signal i see (waterfall or other graphic) is to soft (low).
|
|

I seem to remember that there is a setting somewhere within the sound
card configuration, which allows you to increase the gain on the line-
in socket. It is just a ticky box type.

Kees.

You need to check the advanced audio settings, and turn on the "Mic Boost" or "Mic Gain" by clicking the checkbox provided for this.

If you have a volume control icon (loudspeaker icon) in the task tray just to the left of the clock, right click it and choose "Open Volume Controls".
Now click Options and then Properties, then select Recording.
Make sure that Mic or Microphone box in the scrollable list of controls is checked, if not left click the box once to check it.
Now click OK and another set of volume sliders will appear.
Click the Advanced button under the microphone fader, and check that the gain or boost or whatever the manufacturer has called it is checked or selected.
Note that depending on the make / model of soundcard the Advanced button may or may not be under the Mic control fader.. it could be in the middle of the window under all the faders.

You can see the difference made immediately by leaving Mix or whichever program running, and turning the various settings on / off and adjusting the faders while watching the waterfall.

Not all soundcard drivers call the various controls and checkboxes by the same names, so you may have to apply a little guesswork or consult the help for the sound card.

My card is a Creative Soundblaster AWE64 Gold, and the setting names given are those used by Creative Labs.

If you do not have a volume control in your task tray, you can easily add it.
Go to Start > Settings > Control Panel (you may not have Settings, depends on your operating system, I use Windows 98).. once at Control Panel, find the Multimedia icon and double left click to open. About 1/3rd the way down the resultant dialogue (Windows XP) or at the bottom of the dialogue (Windows 98), you will see a checkbox labelled "Show volume control on the taskbar".. check the box and the loudspeaker icon will appear in your task bar near the clock. It will either be a yellow loudspeaker or a dark coloured loudspeaker depending on your operating system. You can then follow the steps above.

Finally, as it's a laptop, you may have to find out how to disable the built in microphone in order to use the external mic input. The laptop user manual will tell you how to do this.

Paul MW0CDO.

355. FT-100D with transverter?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-15 16:21:01 UTC
From: vhfradiobuff@aol.comspamme
Message-ID: <20030615122101.23175.00000437@mb-m21.aol.com>
Source record: 29478

I was wondering if anyone here has used an FT-100D with a transverter. I am particularly interested in picking up a Downeast Microwave 222 mhz transverter. Apparently their transverters (for whatever kooky reason) are not RF switched, so I need some sort of cable from the radio to the transverter. The FT-100D has an ACC jack on the back, which is commonly used for amplifiers that are fed in the same manner as this transverter.

My question is this: Is there a commercially made cable that I can plug into the ACC jack on the FT-100D and plug the other end into one of the jacks on the Downeast Microwave 222 mhz (10m IF) transverter (or similar transverter) to make it work?

Email replies are welcome.

I have been in the market for a 6 meter stand-alone rig for some time. I have been looking around and have come to the conclusion that there really aren't any decent, new stand-alone 6 meter rigs out there. There are a couple out there, but they don't seem to garner fond reviews from many of their owners.

You could do a couple of things. One, search for a used Kenwood TS-60, a stand alone 6 meter rig that has had some excellent performance reviews (it's no longer made, so you will need to look for a used one). Downsides to this are that they are very hard to find, and very expensive when you do. Also, you could look for a used Icom 551, I don't know how much these run used though.

This leads me to the second suggestion- you could get an all-band, all-mode rig which includes 6 meters, such as the Icom IC-706MKIIG or Yaesu FT-100D. These are small, very portable HF/VHF/UHF rigs that are all-mode, so you could run 6 meters SSB or CW. If you decide to upgrade to HF, then you have a rig that already has all the bands you need.

If you plan on working the current 6 meter band openings for long-distance contacts, you'll need a good, horizontally-polarized directional antenna, such as a 6 meter Yagi, for best results and maximum gain. There are other antennas that will work for 6 meters, but you'll get the best results with a directional beam-type antenna.

Good luck!

Jack.

Forget trying to find a 6 meter only rig. Get one of the lowband rigs that has 6 meters on it. You will get an all mode rig at 100 watts out for the band and also oe for the low bands if you upgrade.

I had a 6 meter ssb rig and a 150 watt amp , sold them both a few years ago and picked up an Icom 706mkllG . That gives me 100 watts out on 6 and most all the other bands. Sure wish they had put the 220 band in that rig.

365. Echolink : why you don't like it ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-15 21:21:55 UTC
From: Thierry <lombrytNOSPAM@hotmail.com>
Message-ID: <3eece36f_2@news.vo.lu>
Source record: 29487
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment

Hi,

I think that the next question will raise tons of objections, maybe. But
this is really not my objective. :-))
I sincerely believe it will not and that most hams will share my opinion...

I didn't know ECHOLINK (see www.echolink.org) excepting that I have heard
the name here and there, until my friend Gunter, alias LX2MG does a
demonstration of its possibilities this afternoon from his shack.

For the novice, here is in short what is ECHOLINK :
I think that the product appeared a few years ago but not many and was
programmed by an US OM who shared it freely with the communauty of hams.
- You are a licensed OM ? Even limited to VHF ? You do not have a good
antenna, no powerful RTX ? Or no ham equipment at all due to space
limitations or/and financial or other reasons ? But you want to work DX
stations or ragchewing in local QSO for years, doesn'it ?
But of course you own a personal computer and a connexion to the Internet ?
Right ! Then, there is no problem !...
(I already hear the first reactions : "What ? How that ?...")

With ECHOLINK, a freeware software that you can download from Internet (2MB
that you can install and setup in some minutes), if you are listed in the
callbook (or licensed this year) and have a valid email because the software
requests these information to valid your access, you can contact people
located on the other side of the earth on the clic of the mouse ! This,
without QRM, without be disturbed by the propagation or near stations
arriving 59++ 1.5 Khz away. All stations arrive 59++ as if they worked you
in the adjacent room ! I do not exaggerate.

The demo I participate to cannot be more convincing, and was a complete
success that convinced me fully of the utility and the power of this new
tool, what I repeated to my correspondant who was very happy of my reaction.
Let's imagine...

Using a sort of Explorer ☺ la "User manager" showing standby/connected users
or relays, from his XP station Gunter selected one user listed in the
"Europe", "Monaco", "3A..-L." container with the hope to find a french
speaking ham. Clic, space bar to emit (similar to PTT button) and a TX
appeared in red at the bottom of the screen. He was on the air... I didn't
really beleive him yet...
Gunter spoke as usual at good distance of his mic : "Here is LX2MG calling
in company of ON1SKY. Do you hear me ?". Some secondes of expectations...
Then as surprise I could be we get a prompt answer, very loud - that
surprised me first - and clear in our speakers connected to Gunter's

computer : "Hi OM, this is JS1....from Chiba, Japan. Do you speak French,
parlez-vous fran&#65533;ais ?".

Imagine my surprise, as was Gunter to hear a JA speaking french !! In the morning I have tried to hear VK and JA stations on the 20, 15 and 10m using Gunter's Yaesu 1000PM. It was quasi impossible to get out a JA station although Gunter used a beam and a 2 kW amplifier at 50%... So the comparison was easy to do and I realize with some secondes of delay how powerful was this tool... Is this really a JA station, an OM calling from Japan that answered us by voice via Internet ??? I didn't believe what I was living... But I knew very well computers, clusters, packet radio and the idea was quickly accepted as possible, hi !

Whaow ! What a demonstration !... The QSO continues for about 15 min or more. At last we enter the callsign of our friend Ryu on our Alert log in order that his callsign be highlighted and bip when it will reappear on screen a next time.

Do you have well understood what I am trying to explain you ?
No yet ? OK. Without ham radio equipement other than a computer connected to the Internet, a mic and HP connected to this PC - that works also fine on wireless portable connected to a "air" ADSL router - we can contact the WORLD in a couple of secondes, loud and clear at all moment ! At the time of the QSO there was about 2000 licensed hams connected to ECHOLINK, Pfff (that means unbeleivable) !
No need to invest 4000$ in an high-end RTX and a 7 bander Titanex beam placed 30 ft high. The OMs are online, you can even make conferences with hams in VK and JA simultaneously, or sending each of them a picture without QRM (not as can be SSTV..., hi) or any other document by email as his coordinates are listed in a small window in the program with other useful data.

But a sad question that can anger some of us arises : will the old fashion amateur radio survive this true revolution ? Because it is ! Check by yourself and work only once with ECHOLINK... then answer me.

With the objective to publish a review of this new way of working DX stations for novices, besides clusters and other packet modes that I listed on my website, I would like to know the point of vue of amateur radio who do NOT like this system for any reason (technical or not). I do not find many, excepting two :
- you need to be in contact with your correspondant to hear it (excepting with a DL university named "Germany" to which you can also hear others hams in QSO, but they installed a special software in that goal)
- QSL are not valid for the DXCC.
- ??? difficult to find other args.

I do not want to create a huge controversial about this subject, pro or con ECHOLINK vs activity using an RTX.
Of course with ECHOLINK I could never work EME or by satellite, etc. OK.
So I really think that both techniques have their place. ECHOLINK can also be linked to your 2m RTX as is the usual packet radio (also accessible to

Internet users).
But ECHOLINK is really fantastic from a pure technical point of vue : accessible to ALL licensed hams, contact easy, it uses the power of your computer if necesary (for sendings mails, etc), no QRM, no propagation problems, no dedicated material required, low cost, etc, etc.

But why shouldn't you like this mode ? OK, the fact to not be able to hear OM in QSO (like when you switch on your TX and listen bands) can be one (as many OM continue to listen bands, sometime 70% of their time behind their RTX), but are there other minus sides ?
Be objective please, give me your opinion after have used this tool as I would like to extract some of your comments to complete my report in preparation (without naming you, in the form of a continuous article if possible, with examples, dumps, recordings, etc).

And please do not say me this is no more a ham radio activity as say some. Because I will answer you immediately : do no more work in SSB because in the first time of ham radio all OM worked only CW with a dipole or so.... So where have you to place your technical approbation ? In that case what technology or accessory do you "accept" or not to work QSO... ?
In my mind ECHOLINK is only a new mode, nothink else, but an easy mode that every licensed OM, even VHF can use freely and that gives to ham radio a new breath through the use of new technologies. IMHO you cannot ignore this fact.

In fact I think that you will not find many arguments valid "against" this marvelous tool... find me some if you can ! ;-)
I should be very happy to insert them in my future article.

NB. Don't afraid, you will continue to hear me on bands for long through my RTX ;-)

Thanks for comments

73

Well I look at the reviews as being (for the most part) real world experiences that have been shared with the community. Sure, someone can pump sunshine re a product and conversely sling horse manure about something else. I look at the overall consensus and make my best assessment from what has been shared already. I am sure 99% of us look at the reviews this way.

I am in need of a Schematic for a Trace Tiger Series TS-424E or any that are close to it. They are offering them on Ebay without telling the bidders what it is exactly. Would like to see if they can be modified to be useful here in the states. Willing to pay all copying shipping costs. Please contact me via email. Thanks Don KB6GQA

Previous responses have it right:
The Kenwood TS-60 is a great rig, but still commands a hefty price.
I have owned the Icom IC-551, and I had great success with it, BUT it is very long in the tooth (like 20+ years) and critical replacement parts are nearly unobtainable. Any display or CPU problems and it's a doorstop.
IF you're looking for FM only I think there are actually a couple of FM-only 6m-only rigs that are relatively recent manufacture (can't recall the exact manufacturers). But probably your best bet is the Yaesu FT-100 or the Icom IC-706MkII/G...if only for future resale value.

Hi.

You posted this in the wrong newsgroup. You should repost it in:

rec.radio.amateur.shitwebeenarguingaboutforthelasttwoyears

Go to http://www.qrz.com to read all the recurring arguments.

Personally, I don't don't like it. Because I do like it. I can talk to
my friends who are thousands of miles away with a 300mw HT
thru another radio and my computer. Which I can't do right now
on HF cuz conditions suck as do my HF antennas.

EchoLink is like gun control. There are two views. And no matter
how much the two sides try and discuss it, the discussion always
turns into a yelling and cussing contest, and nobody every changes
sides.

So if you like it, go use it. But don't bother looking for converts,
cuz you won't find any.

Any suggestions for an antenna to be located inside an apartment that will safely handle 50 watts? I have an amplifier that has the standard SO-259? male connector. I have a J-Pole, but it has a BNC connector and I haven't found any adapter. I don't know if they aren't made because of power considerations or I just haven't found a source. Any advice appreciated.

Regards, Hawkeye

i'm a shortwave radio fan. I like communicating via shortwave. I like the propagation and all the noise ect that comes with commuicating via shortwave. If I want to talk to someone over my computer then I'll just hook up a mike and talk over the internet, but that don't interest me in the least. I guess the best way of communicating without any hassle is via the phone, but it aint shortwave radio. So have fun with the echolink, it's not for me though.

Two meter?

There are many adaptors from BNC to SO-259, etc. You may need a larger
electronics supplier.

Another option is a magmount antenna, mounted on a file cabinet,
refrigerator, or a cookie sheet. Any mobile mount antenna will be able
to handle 50 watts.

Happy trails,

Yes, sorry, two meter. I have a mag mount that I thought about using. Wasn't sure about in-shack radiation with something as small as a cookie sheet or refrigerator top.

My local Radio Shack has BNC to SO-239, but not the "male" connection as found on two meter hand held. I would need the female coax connection on one end and the "male" BNC on the other.

Regards, Hawkeye

Do a little research on RF, but unless you are right next to it, not a
problem. Across the room should be fine.

An ideal ground plane is at least 1/4 wave radius, in this case a
radius of 19.5 inches. The closer you get, the better, but I can
assure you that a cookie sheet works fine.

I sort of meant an electronics supplier, not a Radio Shack. It's a
bread and butter part.

Happy trails,

From: rlucch2098@aol.com
Message-ID: <20030615230015.21466.00000808@mb-m20.aol.com>
Source record: 29403

For sale:
These 7 crystals were pulled from Tube type CB radios over the years.
They are in Great shape but I do not know what radios they are for?
Here is what it says on them, some are James Knight & texas brand, A few even
say "LAF" for Lafayette(?). The Frequencies are only correct if used in the CB
radios that they were intended for.
From L to R:
17T
5T, 27.015
27.085
20T, 27.205
27.215
22T, 27.225
13R, 28.765
I hope someone can use them :-)
Price is $17.00ppd!

You all talking about that two wheeled thingy that has gyro's or
whatever in it to keep from tipping? I actually saw one of those going
down the street the other day. And he was on a major boulevard
also...Not a backstreet. Looked pretty neat to me. I had seen them on
TV when they first came out, but wasn't aware of the name. MK

Sorry, but it just is not amateur radio! It should be called amateur computer! It takes all the thrill out of working a new one. Turning on the PC and just digging up a contact out of fishbowl just will never compare to working with a low power rig and nominal antenna system, fighting through a pileup or lousy conditions. Now using a Ft-817 with 5 watts and a balcony mount whip and a lot of dedication is what I consider amateur radio. I go back to the old definition of amateur radio as a method of testing and improving wireless communication(please don't tell me that Y-FI communication could be considered amateur wireless communcation as 99.999% of the users have absolutely how it works, they are appliance operators.)

Which group of the ten it is crossposted to would that be?
aus.radio.broadcast? aus.radio.cb? aus.radio.scanner? One of the
other seven?

> And since when were we only allowed to discuss antennas in here?

I would bet David was reading it in rec.radio.amateur.antenna -- also in
the crosspost list.

Look at the attribution above to learn where I read it.

Radio Shack has the adaptor. It is part # 278-121. It accepts the BNC
male from one side, and screws into the SO-239 on the other side. If
they don't have it in stock, they can special order from their
warehouse. Costs about $3.50

Source record: 29417
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment

Regarding EchoLink, IRLP, Wires II, (or VoIP), three things can be said:

1. Anything that allows Hams to communicate with other Hams is a good thing -- in fact a great thing.

2. One must keep in mind with VoIP it is the internet that is the main vehicle, not radio as in Ham Radio.

3. VoIp should not deter one from upgrading and experiencing the thrill and pride of building ones own station and antennas and working the world via "Radio". Not having room for antennas or an HOA situation is no excuse. Many have worked DX with indoor antennas, flagpoles and mobile installations and many with QRP - 5 watts. Working VoIP is like picking up the telephone, working South Africa from your mobile with 5 Watts is an experience you will never forget.

399. Samlex 23 Amp Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-16 13:54:20 UTC

I am selling for an estate a Samlex model 1223 12 volt at 23 amp
switching power supply. It is new never-been-used still in the box.
It's about 2 inches thick and about a foot square. Asking $85 plus
shipping.
Thanks;

>>>
>>
>> Two meter?
>>
>> There are many adaptors from BNC to SO-259, etc. You may need a larger
>> electronics supplier.

The UHF series connectors are PL-259 (male) and SO-239 (female). This
series of connectors is rated for operation to 300 MHz, with a voltage
spec of 500 volts peak.

500 volts peak = 353.5 volts RMS = 2500 watts.

See http://www.amphenolrf.com/products/uhf.asp

The BNC series is rated for low-swr operation to 4 GHz (to 11 GHz with
reduced performance). The voltage spec is 500 volts peak, just like
the UHF series, so also 2500 watts.

See http://www.amphenolrf.com/products/bnc.asp

>>
>> Another option is a magmount antenna, mounted on a file cabinet,
>> refrigerator, or a cookie sheet. Any mobile mount antenna will be able
>> to handle 50 watts.
>>

To be effective a ground plane must extend at least a quarter
wavelength in all directions from the antenna base, i.e. about 19
inches at 2 meters.

** Read in Reverse **

Take a look at the Product Review guide lines published on the main Product Reviews page in the managers side bar.

Customer service issues/problems are not reviews of a product (QSL cards). Note however that if a review does review the actual product comments regarding the manufacturer, vendor, etc. are OK. But the review should primarily be of a product.

eHam's Forum has an area "CompanyReviews" that is used for discussing pros/cons of dealing with vendors, manufacturers, etc.

After receiving this email from Phil, my review about Octavia was again
removed.
So.. I read eham.net guidelines, and posted again.
It is very difficult to review a product, if you never received it in the
first place.
Reviews should include from the time you spend your money to the point in
time
where you actually receive the product. Most vendors charge your credit
card
when the item ships, not at the time of purchase. If this was done I would
have
had time to dispute this with my credit card company.

Mm...
Thanks OM. I appreciated your reactions... Not always agree with one or
another, but I understand well your opinions, positive or negative about
echolink.
I do not want to create a controversy, so if you have other args pro or con
please continue to post them. I will see how to use them, i.e.to gather
similar opinions in a same paragrah, etc, in order to make my page about
the subject as complete as possible for novices (and trhe others maybe, hi).
NB. In Belgium, the next CQ-QSO magazine (probably july) will discuss about
echolink too.

I don't think anybody is complaining about it Bobby, but someone brought it up and we are expressing our views. I personally don't have any bone to pick with other hams who want to use it, that is their choice, as for me I will stick with shortwave and write emails on the NGs.

Enjoy Echolink if you want.

Hi Mark,

One and the same. $4950 (and chump change tax). I've seen several.
It's bad enough to fight bike traffic on the sidewalk (probably a
worse collision possibility). And then there are the jogger's lanes,
walker's lanes....

The law is not settled out. Is it a motor vehicle? No, too small a
motor so sidewalk is OK in some places; in other places any motor puts
it in the street. Does it need proof of insurance? No in some places
(not a motor vehicle), and yes in other places (clouded reasons,
often). Can you park it on the sidewalk where they ban bikes? Can
they operate on a bike path? Who has right of way? When they come to
a curb, do they use the wheelchair breakout? If none exists, can they
demand one be built? What is the ethic of using it indoors?

All of this exposes the outline of the need for an alternative
transportation grid that carries very light weight vehicles in the
same patterns of existing traffic without mixing them with 18 wheelers
and soccer moms in SUV's or teenage kamikazes. Here in Seattle we
have had to fight tooth and nail against the politicians to move the
Monorail out of the city center and into general use (not necessarily
lighter, but certainly grade separated). The politicians (both sides

of the aisle) wanted "light" rail - whatever that means. They decided that connecting the city center to the airport was too expensive, so they put in a design for an end-of-the-line rail station one mile away and use (yeah, you guessed it) busses. Can you say full body security Xrays at each transfer?

Last week's papers had the option of showing the bushes on their complimentary Segways or showing bush ii falling off his. Note that mother Barbara walked the distance, literally. Anyone thinking of the next cavalry charge into Tehran? Noble 600.

Kind of like the telephone too.

> 2. One must keep in mind with VoIP it is the internet that is the main
> vehicle, not radio as in Ham Radio.

Right. And that is one of the reasons I don't think much of it. The reason I don't consider it Ham radio is that what is the difference between say using your HT to access a repeater that is on Voip or using a an FRS radio (dunno if that is legal or not) Or you can just use your computer microphone. It's just a big audio chatroom in which the weak link is the part where the radio connects to the net. This is why I just don't think its all that big a deal.

> 3. VoIp should not deter one from upgrading and experiencing the thrill and

I agree there. If a person wants to use Voip, then that's cool. But to me, it is tons more fun to do what you described in your last paragraph.

Heres what you do, Larry. Tell him to pack up that nasty rig, and mail it to me. In return I'll send him my trusty IC-745, which is a lot simpler to operate! Hah!

I think Kenwood makes some nice and inexpensive rigs.

Hi,

I would like to open a parenthesis to complete my first post because one paragraph seems have been jumped by most readers who do not like Echolink.

Without entering the controvery, to all readers speaking about experimentation, RTX, etc I would like to remind you that Echolink can be connected to an 2m RTX too, to its VHF antenna, and a simplex VOX linked to a computer, Ya !

I use a portable PC at home connected to a "air-router" for my ADSL connexion. The other side can be connected to a 2m RTX and a 2m antenna to work with Echolink.
Better, in Germany the HAM guardianship ministery accepted that Echolink use relays (as it is in the U.S.A.), so recognizing by this fact that echolink is a HAM tool, like many others (SSTV, etc).
So, now where is the difference with packet radio ?
On the contrary in Austria, a stupid man questionned so much his ministry that they decided to forbid all access to relay via Echolink..
I close my parenthesis.

Your noggin and the manual.

For the new radios with a zillion menus, buttons etc, try this -- read thru the entire manual, then set up the menus the way you want. In fact my kenwood has Menu A and Menu B. My menu A is set for DXing, Menu B for ragchewing. Set the Mic Gain, processor, AGC, carrier, audio eq, Set for max power unless you want to be QRP. Set ATU in, then leave them alone.

Now there is about only 6 or 7 controls I fiddle with -- all the rest are "pre adjusted - so to speak" Oh yeah on occaision, maybe the noise blanker, Filters, RIT, etc but all radios have (or should have) these anyway. Operating split (dual VFO) is on most new radios and is a DXers dream -- study study.

In fact if you operate in one mode -- say SSB, you can preset the radio so you only use TUNING, AF Gain, BAND Up-Down,
and maybe RF Gain if you know whats that for.

Piece of cake

Lot easier than programming an HT -- hi hi.

Why folks are adverse to reading manuals and spend the time to understand their new device is beyond me. Case in point my family was checking out a new Toyota SUV, some one sed "Where's the Jack???, Honestly they tore the car apart looking for the jack !!! I got the manual went to the index, found JACK, and it sed "The jack is located under the right front passenger seat !!!! Sure enough that is where it was !!!

Much better was to park for free at the local defunct mall, and spend $2.00 for an all day bus pass which delivered you right to the door. I wouldn't do it any other way now. I bought a linear and walked right outside the arena with it, caught the bus and only walked another 100 feet to my van.

Beats parking in the muddy field by a mile.

> Then to cough up another $22 it just isn't worth it for me to

Thanks for the info. The other Radio Shack in town had the adapter as
you described. The clerk in the first store claimed it wasn't in the
catalog.

So, I guess I will go with the J-pole as originally planned.

If you want my opinion, I got my ham license because I like talking on RADIO, not a computer. If I want to slap on a headset and talk thru my computer, I use one of the thousands of chat programs. As far as I am concerned, if more hams start using echolink and not their radios, it just shows the governing agencies that the frequencies they have already given us are too much. As far as the airwaves are concerned, it's "use em' or lose em'"

Just my $0.02

Hi,

As I told in two posts, echolink is better that a big chat room as someone
told here.
It uses also a "sysop" mode in which you can connect your VHF RTX and
antennas to a VOX simplex interface connected to the Internet computer. You
can works also remotely, on /P or /M too.
Thus you can experiment on VHF or building the interface.
This is as ham radio as packet radio is.

This is even more similar to ham radio than i.e.SSTV that all hams recognize
as "pure ham radio activity". However in SSTV you only send images, no more,
where echolink allow you in some modes to experiment too.
good to know

The antenna you already have is a good place to start. A J-pole will
not need a ground plane, either.

Eham reviews are about as fair and informative as the QST Product Reviews. ANY publication or website that receives advertising $$$ from a vendor is biased regardless of the vendor.....end of story. Plus, Eham will take reviews and post them from every dim-wit that doesnt know a damn thing about radios or electronics.

When's the last time you saw a scathing negative review about a Yaesu, Icom, or Kenwood radio in QST?.....Like, never.

419. arggh! price hikes at HRO!

- i guess i should be grateful i blew all my money on ham gear during the first quarter this year? just checked some prices at HRO, and it looks like prices have been jacked up on a number of items (for example, the ic-t90a is now $40 more)...

- which begs the question for more experienced 'boat-anchor' buyers out there:

"what's the best time of year to buy a new rig?" dayton time? just before sanity clause comes down the chimney? high periods of unemployment?

or should i monitor the dollar/yen exchange rate, then calculate shipping lane transit times?

:-P

Good point, Max. Echolink could be a linchpin in an effort to remove us from the spectrum, except for maybe two meters. No need for that spectrum if we can put 'em all on the net, eh? Then again, maybe thet could work the thing in so we would access Voip using FRS radios! 8^)

I don't know how fast they can go, but couldn't be too fast. I bet a
bicycle could outrun one easy. So I think they should be considered
along the same lines as a bicycle, and adhear to the same appx laws.
If they come to a curb, too bad. Time to portage. About the same as
when I'm kayaking down a river. If I come to a logjam, or dry spot, I
can't demand the landowners build me a canal through the bad
spot...Here in Texas, on many rivers, the landowners own the river
halfway out, where it butts against the opposite landowners half of
the river. As far as the segways on city streets, they better stay out
of my way, same as a bike, or whatever. My f-250 will make a mess out
of them if they dart in my path. MK

422. Re: eham.net reviews..WHAT IS FAIR?

WHAT IS FAIR?

If you will look even closer youll find that most of the reviews are
just ramblings by whoever feels like writing about something, and its
strictly thier opinion,(now boys dont get upset, "opinions are
like...well you know what they are like) and rarely based on solid
evidence (which does not include MFG'rs specs, they rarely indicate
actual operations and are usually 'lab condions' YEAH! " Its very nice
to know what everyone thinks about all the gear,(who do YOU trust?) but
you still have to filter that through a lot of personal opinion and
likes and dislikes. Most of us who buy sell and trade a little, know
that the BEST RADIO is the one you just got!! And the worst radio , is
the one that broke on you, even though it has to happen on new and used
gear alike. If it breaks a lot, thats when it should be "shot at and
hit!" Another thing , and not my favorite for sure, about
Ehum.....they call a guy who buys and sells and trades as part of his
version of the hobby, a dealer and leave you poor suckers to deal with
a one timer who doesnt know a 9 from porcupine, and has no real reason
to treat you right. Bottom line as I see it is...."Its my website and
I set the rules" , thats ok but it doesnt necessarily make a great
website in my opinion. I give radios to starting foreign hams, help
blind and handicapped in this county A LOT, and mostly get grief from
EHAM and some others. WAHHHHHH!!!! So my editorial is through for the
day...EHAM is a GREAT SITE, but no ones perfect, or even close!! 73

It operates very nicely serial number 51460080. Has the TXCO-1 master oscillator unit, BPF-1 band pass filter unit, and the following filters (some optional some not):

XF-455K-262-01
XF-110C (455KHz center freq.)
XF-455K-202-01
XF-8.2M-262-01
XF-8.2M-501-03
XF-8.2M-202-01
XF-8.2M-251-01

Does the full 200 watts out. I have the hand mic and manual. No box. I prefer to trade this for an ICOM 756ProII. Also would prefer to meet some where within 200-250 miles as building a shipping container will be difficult. This rig had a tuner placed on top of it by the previous owner. It has several scratches on the top of the case (replacement from Yaesu is $86.03 & shipping). I have pictures for anyone interested. Will sell for $1875.00 Plus shipping.

I would just go with an ISP that allows one to set up a business web
page, and then buy something like Microsoft's Front Page software,
which pretty much automates creating web content -- just use one of
their formats that's already dummied up, and insert the appropriate
words and/or pictures. Then you don't have to screw with anyone to
make changes.

Hi,

Be accurate. In single-user mode, the usual one, you are working with a PC connected to Internet using the VoIP protocol. You do not need an RTX or antenna. Right.
But in sysop mode you can use your favorite 2m RTX and antenna to work in conjunction with Echolink. You only need an additionnal VOX simplex interface than can be the well-known RigBlaster II too. In such a mode you works like in packet radio. So it is ham radio !
See some links to manufacturers at the end of page
http://www.astrosurf.com/lombry/qsl-echolink.htm

I have just been informed that Trace Inverter Company will not give support to any person who wishes to sevices their own equipment. You must send it into the service center and pay someone else to do the necessary repairs. I have a Trace TS (Tiger Series) inverter which I wish to repair and only requested a schematic. They seem to be so afraid of somone stealing some design secrets that they will not help.

I for one will think twice before using any of their products in the future

It has been my experience that the ones most affraid of someone cheating them, are themselves the ones most likely to cheat. I wonder if that holds true with companies too. Can anyone out there help me in locating a schematic? Will gladly pay all reasonabie costs. Please respond to my email address Thanks Don Smith

Any ham who is using his computer to access echolink is not on the air.
He (or she) could better spend that time on air instead.

Simple, isn't it?

Who cares if echolink is "good" or "bad" or "silly" or "stupid".
It *is* a way to avoid using ham radio, when ham radio could be used.

Followups to alt.braindead.ex.hams please.

I agree. It is probably more like tens of thousands.

At one time writing a chat program was *the thing* every
young hacker attempted. Much of the resulting code still
lives in places like simtel.

Because you can end up transmitting over the air waves on the other end.
That's why. So you must be licensed to do so.

Honk. Wrong answer. The radio that is used to transmit on the other
side of the a VoIP connection thru the internet is the sole
responsiblity of the owner of the radio. HE needs a license. And HE
is responsible for what gets transmitted, irregardless of who creates
the audio.

Which is why it's a very good idea to control who uses a VoIP link
connected to your radio. But don't feel bad. Very few hams today
understand the rules.......

Think of it this way. A DJ at an FM rock and roll station could be
transmitted on a VHF ham frequency thru the internet if the owner
of the computer/radio decided to lash things up that way. Would the
DJ then have to go take a ham test because Billy Bob is replaying
him on two meters ?

To some of us hams, there is more thrill in talking to an OLD one
(friend) then there is "working" a new one.

UR 59, QSL via Derek is about as "thrilling" as hemorroid surgery
to some us.

Computers, and the internet, are tools. But for some strange
reason, hams want to crack concrete with their heads instead
of using a hammer.

>Wheres the radio in this comms mode?

Well, there are a bunch of radios. First there's a 300mw HT I carry around the house, then there's a 40 watts VHF radio in my truck. There's another 50 watt VHF radio hooked to a sound card an a COM port on my computer.

In Hawaii (I'm in Florida) there's another VHF radio that's on a repeater frequency and is also hooked to a sound card and a COM port on a computer. That radio is on the frequency of a KH6 repeater, which is actually two radios, a receiver and a transmitter.

My friend in Las Vegas has a two meter HT, and a 50 watt VHF radio hooked to a computer.

We both connect to the repeater in Hawaii, so we can talk to each other.

So lets see how many radios that takes:

1. My HT (or the radio in my truck).
2. My VHF radio hooked to my computer.
3. A VHF radio in Hawaii hooked to a computer.
4. A repeater receiver in Hawaii.
5. A repeater transmitter in Hawaii.
6. A VHF radio in Las Vegas hooked to a computer.
7. An HT in Hawaii.

So for me to talk to a friend in Las Vegas it takes 7 radios. I guess we could assume that there's a lot more 'radio' in Echolink then there would be if I talked to you in VK land on 20 meters - seems to me that would only take 2 radios. So them Echolink guys must be 3.5 times the 'hams' that the post card collectors are, cuz they use 3.5 as many radios to talk to each other, right ?

Its a matter of liability. If they help you do a poor repair job and
someone gets hurt, they can be sued for millions of dollars. No one who
makes inverters or large power supplies passes out the information
freely. Go ahead and buy a different brand, then try to get a manual.
Good luck tilting at windmills.

No it is not the "wrong answer" but merely a short one. Anyone transmitting over the ham bands, regardless of whether it is simplex, the local repeater, or a repeater accessed over Echolink, must either be licensed for the frequency or operating under the direct supervision (i.e. in the same room) of a duly licensed amateur operator or they are in violation of the FCC rules. If the control operator of the repeater (whether your local repeater or an Echolink repeater) discovers someone operating illegally on the system, he/she is required to take the steps to get them off the system. But the person using the system is still responsible for their own illegal operation and can be fined by the FCC independently of the responsibilities of the control operator of the repeater or link.

By your logic, if both of you happen to be at home using your computers directly, that's Zero radios making you Zero times the ham. I'd choose a different way of making your point.

Eh what? "after" ??? You are confused. Most of my QSLs
are from the days when the only digital mode was 45 baud ;-)

My wife collects post cards.

I've been on HF (and VHF and UHF) working DX, ragchewing,
and contesting a WHOLE lot longer than I've operated the digital
modes. Of course I QSL when asked, don't you?

Did have one G station ask me for a QSL for our "10 meter"
IRLP contact. He was on his computer, I was on 10 meters working
him via K2***. Sent a card to the K2*** who I actually worked :-)

IRLP and EchoLink are cute, simple and obvious technologies
that allow lazy hams to pretend to play radio. Guess it would be
too hard to put something on HF to work KH6, right?

I think it is the wrong answer. Long version is wrong too. For several
reasons.....

1. The FCC has made no decisions on rules regarding VoIP - so there
are no FCC rules that apply. They haven't made any yet.

2. The closest thing to the scenario of Echolink (internet sound card
audio being transmitted via a radio) that we are now currently allowed
to do would be a telephone patch. In the event that you are doing a
phone patch for Cousin Freddy, who is on the phone, you are the ONLY
one reponsible for what gets transmitted over your radio. Cousin
Freddy can in NO WAY be held responsible for any violations regarding
FCC rules - he isn't "transmitting over the ham bands" - he's talking
on the telephone.

In your example you fail to realize that:

On simplex, I would be transmitting on a radio.
On the local repeater, I would be transmitting on a radio.
In both cases, I would be responsible for my transmissions.

BUT......

On an Echolink link to your local repeater (or simplex radio) I MIGHT
be talking into a six dollar plastic microphone hooked to the sound
card on my computer.

There FCC has NO jurisdiction of what I can transmit on a VoIP link
over the internet. For example:

I can transmit music.
I can use profane language.
I can conduct communications relating to my business.

None of which I can do on ham radio frequencies......

Yes, you are correct. In the case that I was transmitting with a RADIO
on your repeater, and violating the law, the control operator is
responsible for getting rid of me and we both could go to radio
prison.

BUT.......

In the case that I am using a six dollar plastic sound card mic, and
my audio is leaving my computer via the internet, the control operator
of your repeater is going to jail all by himself. There are NO FCC
RULES regarding what I can say into a plastic microphone hooked
to my computer. I didn't hook YOUR computer to a RADIO - YOU did.

So how can you possibly IMAGINE that the FCC could "fine" me for
what comes out of YOUR radio ?

As I said before, there are no FCC rules regarding VoIP. And until
somebody screws up big time or raises holy hell about what somebody
else is doing (as happened in years past regarding packet messages),
there is no way of telling exactly who will shoulder the majority of
the blame. Sooner or later that will happen and we will have a clear
definition of what we can and can't do - maybe no VoIP/Radio links
will be allowed at all.

If you are running an Echolink/Radio connection, you'd best be able to
cope with whatever comes out of YOUR radio, because YOU hooked it to
the internet and there are no FCC rules about internet VoIP
communications.

If I happen to be sitting in front of my computer using Echolink, I
still have to use two radios - I don't have the option of using a
plastic microphone.

Point is, the weak point about Echolink is that it works with no
radios. But just because it does, doesn't mean we all have to toss the
radios and get a plastic microphone. After all, this is Ham Radio, not
Ham Plastic Microphone.......

Here are a bunch of items for sale. Prices do not include shipping. I
will ship overseas.

Heathkit HO-10 Monitor Scope.....$85 plus shipping
Very good working condition although some chipped paint on the top
of the case. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/heathho10.jpg
http://members.cox.net/radiostuff9/heathho102.jpg
http://members.cox.net/radiostuff9/heathho103.jpg

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-Bï¿½ï¿½ï¿½.$150
plus shipping
Military set of James Millen wavemeters covering 1.5 to 40 MHz.
Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

Two Individual James Millen Wavemetersï¿½ï¿½ï¿½$25 plus shipping
One covers 3.5-6 MHz, the other covers 18-40 MHz. The plastic cover
on one is broken
http://members.cox.net/radiostuff9/millenwm.jpg
http://members.cox.net/radiostuff9/millenwm2.jpg
http://members.cox.net/radiostuff9/millenwm3.jpg

U.S. Army Signal Corps Flame Proof Key J-5-Aï¿½ï¿½ï¿½.$65 plus shipping
Flame Proof Key J-5-A made by L.S. Brach Mfg. of Newark, NJ. This is a
W.W.II key in very good condition.
http://members.cox.net/radiostuff9/flameproofkey.jpg
http://members.cox.net/radiostuff9/flameproofkey2.jpg

URM-120 Wattmeterï¿½ï¿½ï¿½ï¿½$225 plus shipping
Good working condition, last calibrated in 1999. Includes original
manual and revision
http://members.cox.net/radiostuff9/urm1201.jpg
http://members.cox.net/radiostuff9/urm1202.jpg

National Type MCN Dial - new in the boxï¿½..$60 plus shipping
http://members.cox.net/radiostuff9/mcn.jpg
http://members.cox.net/radiostuff9/mcn2.jpg

National Type K Dial Assembly - New in the Boxï¿½ï¿½ï¿½..$30
http://members.cox.net/radiostuff9/type_k.jpg
http://members.cox.net/radiostuff9//type_k2.jpg

Large Millen Dial - New in the boxï¿½ï¿½..$20 plus shipping
http://members.cox.net/radiostuff9/millendial.jpg

National HRO Drive .....$45 plus shipping
Good condition - no box.
http://members.cox.net/radiostuff9/2ndhrodrive.jpgg
http://members.cox.net/radiostuff9/2ndhrodrive2.jpg

National Black PW Dial - $75 plus shippingï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
Here is a chance to replace that chipped up dial on your HRO receiver.
These look to be new. No box - a couple of very tiny paint chips
http://members.cox.net/radiostuff9/hrodial.jpg
http://members.cox.net/radiostuff9/hrodial2.jpg

RCA Capacitance Testerï¿½ï¿½..$40 plus shipping
Capacitance tester from the 1940's. Uses a magic eye tube reflected with
a mirror.
Working but needs a power cord. I checked it with a cheater cord
http://members.cox.net/radiostuff9/rca_captester.jpg

Three RCA Pocket Reference books for the 1940's and 1950'sï¿½ï¿½..$12 plus
shipping
Condition is fair to good. The cover on the 1946 book is missing a very
small piece of the back cover. They are:

1945 Tube Reference Book - Tucson Radio Supply stamped inside
1946 Electron Tube Reference Book - Tucson Radio Supply in gold
on cover
1953 RCA Reference Book (Tubes, Batteries, Parts, Test Equipment)
- Radio Parts of Arizona, Phoenix
http://members.cox.net/radiostuff9/rca_books.jpg

Barker and Williamson Coil Mounting Barï¿½ï¿½..$15 plus shipping
http://members.cox.net/radiostuff9/bwcoilbar.jpg
http://members.cox.net/radiostuff9/bwcoilbar2.jpg

Eimac 450TH/VT-108 Transmitting Tube - $150 plus shipping
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/450th.jpg

Triplett VTVMï¿½ï¿½ï¿½..$45 plus shipping
Works but needs to be calibrated. Good cosmetic condition.
http://members.cox.net/radiostuff9/triplettvtvm.jpg
http://members.cox.net/radiostuff9/triplettvtvm2.jpg
http://members.cox.net/radiostuff9/triplettvtvm3.jpg

Eico 324 Signal Generatorï¿½ï¿½..$40 plus shipping
Good condition and works well. Includes a copy of the manual.
http://members.cox.net/radiostuff9/ eico324.jpg

HAL Computer RTTY Interface CRI-200....$75 plus shipping
Older HAL unit in excellent cosmetic and working condition. No
documentation but it can still be obtained from HAL.
http://members.cox.net/radiostuff9/hal_cri200.jpg
http://members.cox.net/radiostuff9/hal_cri2002.jpg

Heathkit Electronic Switch Model S-2 with original manual....$25 plus
shipping
http://members.cox.net/radiostuff9/heath_switch.jpg

I will ship overseas.
You can check my user ID "n7rk" on Eb*y
for a reference as to dealing with me.

Thanks for looking and 73,

Dave N7RK

For simplicity of operation and good performance, the IC 718 cna't be beat. The price alone should give cause for a second look. If it wasn't for having to solder in the filter, it would be nearly perfect.

The other rig that warrants a look for ease of operation would be the TS 570 DG. At its current price and what it offers, this is a great beginners rig. Both these rigs would have my vote.

That's nothing new. That's just Clueless Newbie Syndrome. It's been
around for years. How many Clueless Newbies have you heard get
excited about "working DX" when two meters opens and guys from
the next state show up on the local repeater ? If you have your facts
right (which I doubt because I don't think you can access an IRLP node
with a computer, you need a radio) then the guy was simply a Clueless
Newbie. No harm in being one of them, that's how we all started out in
ham radio.

>Eh what? "after" ??? You are confused. Most of my QSLs
>are from the days when the only digital mode was 45 baud ;-)

Gee, Hank, I didn't know you were a Deee-X'er. I always thought you
were one of them digital geeks.

>IRLP and EchoLink are cute, simple and obvious technologies
>that allow lazy hams to pretend to play radio. Guess it would be
>too hard to put something on HF to work KH6, right?

Just like packet BBS's are cute, simple, obvious technologies that
allow lazy hams to be 'SYSOPS' and pretend to play email, right ?
Guess it would be too hard to hook up a modem to a phone line,
and run AOL setup, right ?

HF depends on propagation, Hank. I thought a Deeee-X'er like you would
know that. Propagation between Florida and KH6 (when it happens)
usually happens on 20 meters at 2 or 3 AM EST. Which isn't a good
time to talk to guys in Honolulu who are getting ready for bed. As the
sunspot cycle slowly sinks into the west, won't be too long until
it'll be years until we hear KH6 on the east coast again.

Actually, IRLP is more 'hammy' than Echolink, cuz if you wanna play
IRLP, you have to have a radio - no plastic sound card mics allowed.
The guy who wrote Echolink feels that the plastic sound card mic
option is a good, but also a bad, idea. It's good from the standpoint
that it gives new hams the option of learning to communicate with
other hams before they have a station, but it's bad from the
standpoint that it may keep a few of them from ever doing anything
else. I think I kind of agree with him, almost. I think we'll lose

more than we gain to the plastic microphones, but that's another discussion.

Ham radio to me has always been about COMMUNICATIONS - not about "new ones" and shoe boxes full of post cards - so I don't worry about how much Deee-X I can work, I just like to talk to people that I have things in common with.

I got an idea. Since VoIP depends on the internet, and the internet is evil when it comes to ham radio, let's can this discussion in the news groups and all of us can get on 20 meters and discuss it in real time. How's that sound ?

Dee, that's the short version. The long version is over here:

460. keying problem with transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-17 11:27:47 UTC
From: Jerry <jerryaa@fbx.com>
Message-ID: <3eeefb26@news.lh.net>
Source record: 29281

I don t know if you all can be of any assistance on this, but I received my new Icom 703 in the mail today. The old [10 days old when it died] one I sent in because the tuner wouldn't tune, some keying problems, and no transmit. But before it went DOA, I had a similar problem with it that I am having with my new
703.
I use a keyboard cw program called CW type by UA9?? using an optocoupler between computer and rig.
I have used it very successfully with my Icom 706 and my Kenwood 450S.

On my 703 which has all of the keying options that the 706 has, what I type in is not what is transmitted. examples: enter a v and maybe get a g or just a 3 or 4 second "dah", enter an e and usually get a long "dah". same type of problem with other letters. Now,.....

the really weird thing I just found out is I can use CW Type and transmit into the dummy load of my MFJ 969 tuner with perfect CW output. I have tried my vertical and my dipole antenna but keyboard cw not usable.
Can you think of anything that might cause this? Other users have reported somewhat similar problems with straight keys and paddles, but it seems to be selective on the frequencies. ICOM has recommended to some people using a good ground. I use a ground.

I am wondering if anybody knows of a cure for this problem? I am speculating that it is some kind of RF problem.

Here are a bunch of items for sale. Prices do not include shipping. I
will ship overseas.

Heathkit HO-10 Monitor Scope.....$85 plus shipping
Very good working condition although some chipped paint on the top
of the case. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/heathho10.jpg
http://members.cox.net/radiostuff9/heathho102.jpg
http://members.cox.net/radiostuff9/heathho103.jpg

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-B....$150
plus shipping
Military set of James Millen wavemeters covering 1.5 to 40 MHz.
Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

Two Individual James Millen Wavemeters...$25 plus shipping
One covers 3.5-6 MHz, the other covers 18-40 MHz. The plastic cover
on one is broken
http://members.cox.net/radiostuff9/millenwm.jpg
http://members.cox.net/radiostuff9/millenwm2.jpg
http://members.cox.net/radiostuff9/millenwm3.jpg

U.S. Army Signal Corps Flame Proof Key J-5-A....$65 plus shipping
Flame Proof Key J-5-A made by L.S. Brach Mfg. of Newark, NJ. This is a
W.W.II key in very good condition.
http://members.cox.net/radiostuff9/flameproofkey.jpg
http://members.cox.net/radiostuff9/flameproofkey2.jpg

URM-120 Wattmeter....$225 plus shipping
Good working condition, last calibrated in 1999. Includes original
manual and revision
http://members.cox.net/radiostuff9/urm1201.jpg
http://members.cox.net/radiostuff9/urm1202.jpg
http://members.cox.net/radiostuff9/urm1203.jpg
http://members.cox.net/radiostuff9/urm1204.jpg
http://members.cox.net/radiostuff9/urm1205.jpg

Turner P-9D Dynamic Microphone....$40 plus shipping
Dynamic Microphone made in Cedar Rapids, Iowa. This mike works and is in

Very good condition externally with a small tear in the cloth
http://members.cox.net/radiostuff9/p9d2.gif
http://members.cox.net/radiostuff9/turner_dynamicmike.jpg

National Type ACN Dial - New in the Box.....$75 plus shipping
http://members.cox.net/radiostuff9/type_acn.jpg

National Type MCN Dial - new in the box...$60 plus shipping
http://members.cox.net/radiostuff9/mcn.jpg
http://members.cox.net/radiostuff9/mcn2.jpg

National Type K Dial Assembly - New in the Box.....$30
http://members.cox.net/radiostuff9/type_k.jpg
http://members.cox.net/radiostuff9//type_k2.jpg

Large Millen Dial - New in the box....$20 plus shipping
http://members.cox.net/radiostuff9/millendial.jpg

National HRO Drive .....$45 plus shipping
Good condition - no box.
http://members.cox.net/radiostuff9/2ndhrodrive.jpgg
http://members.cox.net/radiostuff9/2ndhrodrive2.jpg

National Black PW Dial - $75 plus shipping.....
Here is a chance to replace that chipped up dial on your HRO receiver.
These look to be new. No box - a couple of very tiny paint chips
http://members.cox.net/radiostuff9/hrodial.jpg
http://members.cox.net/radiostuff9/hrodial2.jpg

RCA Capacitance Tester....$40 plus shipping
Capacitance tester from the 1940's. Uses a magic eye tube reflected with
a mirror.
Working but needs a power cord. I checked it with a cheater cord
http://members.cox.net/radiostuff9/rca_captester.jpg

Three RCA Pocket Reference books for the 1940's and 1950's....$12 plus
shipping
Condition is fair to good. The cover on the 1946 book is missing a very
small piece of the back cover. They are:

1945 Tube Reference Book - Tucson Radio Supply stamped inside
1946 Electron Tube Reference Book - Tucson Radio Supply in gold
on cover
1953 RCA Reference Book (Tubes, Batteries, Parts, Test Equipment)
- Radio Parts of Arizona, Phoenix
http://members.cox.net/radiostuff9/rca_books.jpg

Barker and Williamson Coil Mounting Bar....$15 plus shipping
http://members.cox.net/radiostuff9/bwcoilbar.jpg
http://members.cox.net/radiostuff9/bwcoilbar2.jpg

Eimac 450TH/VT-108 Transmitting Tube - $150 plus shipping
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/450th.jpg

Triplett VTVM.....$45 plus shipping
Works but needs to be calibrated. Good cosmetic condition.
http://members.cox.net/radiostuff9/triplettvtvm.jpg
http://members.cox.net/radiostuff9/triplettvtvm2.jpg
http://members.cox.net/radiostuff9/triplettvtvm3.jpg

Eico 324 Signal Generator....$40 plus shipping
Good condition and works well. Includes a copy of the manual.
http://members.cox.net/radiostuff9/ eico324.jpg

HAL Computer RTTY Interface CRI-200....$75 plus shipping
Older HAL unit in excellent cosmetic and working condition. No
documentation but it can still be obtained from HAL.
http://members.cox.net/radiostuff9/hal_cri200.jpg
http://members.cox.net/radiostuff9/hal_cri2002.jpg

Heathkit Electronic Switch Model S-2 with original manual....$25 plus
shipping
http://members.cox.net/radiostuff9/heath_switch.jpg

I will ship overseas.
You can check my user ID "n7rk" on Eb*y
for a reference as to dealing with me.

Thanks for looking and 73,

Dave N7RK

463. FS-ICOM IC-735

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-17 12:38:42 UTC
From: n2ion@aol.com
Message-ID: <20030617083842.09323.00001490@mb-m07.aol.com>
Source record: 29287

FS: ICOM IC-735 HF Transceiver, runs on 13.8V DC. All bands 160 through 10-Meters, general coverage receiver, 100 watts (adjustable) transmitter. All modes CW/SSB/FSK/AM/FM. Works well - includes power cable, manual (missing covers), does not have the little door covering the adjustments (I don't think any IC-735's do).

$400 SHIPPED CONUS

464. Re: 6 meter suggestions

Newsgroup: rec.radio.amateur.equipment

Message-ID: <H_DHa.26569$fe.492039@twister.rdc-kc.rr.com>
Source record: 29288

For local FM only work, I have an Alinco DR-M06T, which is a 10W 6M FM only rig (which drives an 80W amp). The Alinco DR-M06TH is the 20W version. Good prices on the DR-M06TH are around $100 to $125, and it sells for $260 new.

Look at the Alinco DX-70TH. HF + 6M at 100 Watts all mode. This is an inexpensive all around radio. It has a few downfalls, like the noise blanker sucks, and that you can only program in 1 PL at a time (It's a switchbank on the bottom of the radio). I own 2 of these and paid <$350 each. These sell for $750 new and $350 to $450 on eBay.

Be aware that the DX-70T is a 10 Watt 6M model (HF is still 100 Watts).

My other choice would be the Icom 706 MIIG, which covers HF thru 440 all mode (Except 220). Older models of the 706 had 6M in them and can be had for good prices too.

These are current models in the Royal Navy. Every RN vessel will carry
this morse key. Personally, I don't like it much, but assessments of
Morse keys are very subjective and I know several who swear by (at) it.

Ok, I sure shot myself in the foot on THAT comment - and to be honest,
I thought echolink was exclusively PC to PC comms. Thought IRLP was

the HT to repeater thing you describe. Ah well, live and learn - thank you for the information.

Still dont like the concept.

Max,

Don't think of this as a computer only type of communications. You can connect Echolink in many ways:

- My local node is on a 440 repeater. Find your local Echolink repeater node, and link it to my node. Now both repeaters are linked together.

- Say your traveling to Dayton, and want to keep in touch with the local boys back home. You link the Dayton repeater (or link) to your local repeater and rag chew all you want.

- So you traveled to London, and want to brag back to the guys at home, and all you brought was your laptop. You log in at the local Internet cafe, and bring up Echolink. you click on your repeater and talk to the guys back home, just like your there.

472. Yaesu FT901DM problems

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-17 15:32:27 UTC
From: scotsilv@aol.com
Message-ID: <cb058c66.0306170732.fa14751@posting.google.com>
Source record: 29294

I recently bought a used Yaedu FT901DM.

The radio works well, but I noted two glitches:

1. On transmit, I get 100-110+ watts out on all bands, with smooth and symmetric dipping of the plate (which is at the correct 50 mA with no drive).

However, if the Preselector tuning is way off (e.g., set for 80M while the bandswitch is set for 15 or 10M), and I key the transmitter on 15M or 10M with no drive, I can get an iC of 100 or 150 mA and a few watts output at various settings of the plate and load controls. This occurs even into a dummy load (haven't measured the freq. of the output yet). Is this xmitter instability, or a known behavior?

2. The memory module works fine, but when the rig is powered up, the "M" memory LED above the freq. display is strobing - I believe it should be off. When the "M" button is pushed, the memory LED comes on solidly and the memory is stored properly for use. (If I disconnect the memory module the LED stays off).

There are two trimmers in the memory module enclosure - wonder if one sets the LED illumination threshold, or if I just have a bad component.

Thoughts from those who know the rig? (Also, need a service manual).

Has this idiotic sueing thing really gone that far? I think that means
there should not be schematics available for any equipment at all, which
is clearly not the case. Anyway, would not a disclaimer in the service
manual be enough to circumvent this?

I am more inclined to go with the 'proprietary crap' explanation of this
phenomenon.

Met vriendelijke groet,

Maarten Bakker.

Hi ed,

Think about spending your funds on a used hf radio and a transverter,
that will get you on 6m ssb or cw easy and less expensive then a 6m only radio.

many nice clean tube final radio like kenwood 520 series out there you can copy
cw
and then jump to the general ticket. http://www.mod.dk has qrp circuit so you
can
run the transverter with 5 watts.

Jim,
I understand you but I am not completely agree... :-)
Not many hams speak and underline the fact that there can have a link
between EchoLink and your favorite 2m transceiver (or forget to speak
about...) and your favorite ground plane VHF antenna.

Please look at the list of stations on the EchoLink program; those callsigns
with a -R are running the software connected to a radio and repeater; those
with the -L are running simplex links using a radio, proof this is a HAM
activity. This Echolink can use repeaters, and is recognized as such by many
national associations (excepting France and some others wo refuse to
interconnect networks, i.e. Radio to Internet) !

So Echolink is able to work together with a 2m RTX, like is packet radio.
To use the EchoLink software you can use a simple one transistor soundcard
interface used with many packet and PSK software programs. There are also
interface boards available, see the Interface link on the EchoLink web site
or links on my webpage http://www.astrosurf.com/lombry/qsl-echolink.htm

NB. For novices, a packet TNC is not a suitable interface; a one transistor
PSK / Soundcard interface is all that is required. DTMF, Timing and other
controls all built into the software. Other use a RigBlaster II.

Hi,

I am not a specialized in HF or alike (see my website) but in the past, as SWL ONL5183, I published several reviews (ALA1530, TS570D) on eham. Each time I received many posts by email telling that my reviews were very appreciated, or confirmed the opinion of the ham who wrote me, hopefully !

What I have written was not simply an "opinion" more or less well writen (a part of my objective). I tried to be as complete as possible, with in mind the question : "what a novice needs for information about this product" and "what a advanced ham could ignore, a subtility, a small feature that could interest him...", What I have tried to develop.

Ecah time I have a review to make I try to question first many users, pro and con. Then I ask some accurate questions to the manufacturer or the designer itself. That works each time and asnwer are always complete.

I also explain on my website that the last rig you bought is of course always the best one. And that the opinion of your friend is not necessary the best in that matter (see my comments about "How to select a RTX"on my website). His or her opinion can be useful of course in that sense that the convergence of similar opinions usually indicate a reality (but stats are a difficult science). Then there the opinion of pro users that you cannot ignore.

I don't think that eham publishes many false reports from fool men, dreamers, etc. On the contrary. From what I have heard, many HAM do read those reviews with many interest.

But personally thare represent only 33% of my decision. The other 33% come from pros, advanced users and manufacturers, the last 33% from my own criticism (of course from the moment I can have some experience using similar devices). With time running (more experience in experimenting in the field or reading reports, forums, etc), I think (this is personal) that all three parts represent the same weight and that this is the best balance I could find to really appreciate a product.

NB. I have to buy a 5 bander beam very soon for a mix or fixed and portable ops. Be sure that it will be reviewed on eham.

Sounds like it. Grounding is not really the answer. You need to find
out why you have a hot "rf" shack, or feedline. You may have excess
common mode currents flowing on the shield of the coax due to poor
decoupling, or other problems. Are you using a good balun or choke at
the feedpoint of the dipole if coax fed? Does the vertical have a good
rf ground system under it? RF problems in the shack are an
antenna/feedline problem, not grounding. MK

John,

Are you saying Echolink is an excuse for you to not want to upgrade? I would hope not. There are many used HF rigs out there that can be had for a song. May not have all the bells and whistles but at least it will get you on the air, using the "airwaves". Like I said before, it we don't use the frequencies, we are going to lose them. Echolink may provide you with a "temporary" means of enjoying ham radio, but by all means don't let it stop you from upgrading and really enjoying the hobby.

I did that and would not do it again with the price of todays rigs. Got rid of a amp and transverter and bought an Icom 706. Low band rig $ 300, transverter $ 100 , amp to get to the 100 watt level $ 200-300 . That is about 6 to 700 dollars and you have old equipment. Just spend the same for one of the newer rigs that have 6 meters at 100 watts out and also the lowbands.

Sure, there are things you can do with it, but you could meet with
people in a chat room also. That's the thing about Voip. It is a cross
between a chat room and a phone patch. neither of which is all that
exciting.(to me)

The lawyers drove the decision not to give out schematics at APC. Everyone in Engineering knew it was a simple matter to reverse-engineer a unit if someone really wanted a schematic bad enough. Some of the Matrix power boards were potted, but this was a safety issue and was only done as a last resort as it made the boards unrepairable.

I'm trying to locate a manual for a TS-3499/URM RF power meter, manufactured by Electro Impulse for the U.S. Navy back in the 1970s. I've been told by a gentleman at Electo Impulse that the assigned manual number for this meter is NAVALEX 0969-166-4010. My searches of the Web for a copy of the manual, or a PDF or other scan of it have come up dry.

Anybody got a lead to where the manual might be found?

advTHANKSance!

think about your question, Is the rig a 2 meter rig? if so wouldn't the offset be + or -600khz?

Yes I know that in Duplex the RX and TX are offset by +/-600khz depending on where in the 2 meter band. I also know that in Simplex mode they are both the same frequency. That was not my question. I was not asking what frequencies are different. I asked if there was a difference between TX and RX crystals. It seems like everyone I've talked to isn't sure. I bought a rig with 17 sets of crystals and it was from the east coast and none of the setup match any of the local repeaters. If I move around some of the crystals to match either simplex or duplex I can figure out how many crystals or sets I need to get.

Thanks again for any help
Charles

Ahhhhh but no.. even if the rig is set up for repeater operation, the crystals would not be 600KHz difference.. first you would add in the (1st) IF frequency, which, depending upon the rig could be 10.6, 10.7, or even some with an odd IF. This is usually added to the chosen frequency (i.e. for 10.7 MHz IF and an TX frequency of 145.52 you would get an RX crystal of 156.22. TX splits would be accomplished by simply using a TX crystal 600 KHz higher or lower than the 145.52 mentioned.

> what is the difference (if any) between the transmit and receive crystals?
>

The xmit crystals are usually in the range of 8 or 12 mhz and multiplied by whatever whole number it takes to get to the 144 mhz band. Usually the number will be 18 or 24 . The receive crystal will be calculated by subtracting the IF (usually 10.7 mhz) from the 144 mhz frequency and then deviving by 3. That puts them in the range of about 45 mhz. The above is for most crystal rigs in general. So you can not just swap them around.

At the going price of crystals you would be beter off getting one of the newer rigs for around $ 150. The old Icom probably does not have the subaudio tones that many repeaters now need.

>lives in places like simtel.

Hackers excluded, for the majority of computer users (using Microsoft there are:

1) Yahoo Messenger
2) AOL Instant Messenger
3) MSN Messenger
4) ICQ
5) IRC
6) CGI or Java or HTML-based web chat
7) Multiple-service compatible messengers, such as Trillian, iChat
8) Microsoft Netmeeting or similar protocol multimedia conferencing programs

Let's keep this argument to the majority of the computer world, thank you.

John

Are you sure it's an IC-21A? Does it look like this?
http://www.rigpix.com/icom/ic21a.htm Everything I see on the 21A says
it is diode matrix programmable, which would indicate that it does not
use crystals. It also only covers 144 to 146 mHz so would not be
useable on the upper repeater frequencies.

One of many... I am not on trial so I will not go through every "excuse".

There are tons of hams who are anti-Echolink and will go after HF so I don't have to. I have no
worries.

I enjoy ham radio immensely and I hear a lot of frustrated hams that try to use HF only to find out
they can't. I don't want to join in their frustration and have my enjoyment of the hobby decreased.

I'm unlikely to dart in your path though. But dunno...It might be closer than you think if you are driving one of these new fangled jobs with thin metal and stamped parts. My f-250 is a 68. Thick metal and forged parts. And it's got a heavy utility bed and shell on it. Just the custom welded double deep "living room couch" rear bumper, which once had a crane mounted on it, will resist the aggressions of most vehicles if they sneak up behind me. Probably weighs about the same as a geo metro with a full tank of gas. But needless to say, I doubt I will want to play. My truck has no dents in it. I'd like to keep it that way. :/ MK

I found an old newsletter online that says otherwise, since whatever
club put it out mentioned purchasing the rig and allocating more money
for more crystals.

The IC-22 was crystal controlled. A synthesizer was added to it,
making it the model IC-22S. That popular rig was amongst the earliest
2meter rigs with a built in PLL synthesizer.

It makes sense from the model number that the IC-21A would be a crystal
controlled rig.

Remember, the IC-22 is almost thirty years old. People might forget
details after that time, or someone made that webpage that wasn't
even around in the days of crystal control.

For that matter, some of those old rigs had some internal scheme for
jumpering the crystals so you could do things like .34/.94 and .94/.94 simplex
without the need for two .94 receive crystals. That might be the "diode
matrix" referred to on that webpage.

I can't dispute what you say, especially when Charles has physically seen xtal sockets, but I have found the radio on several websites, and they all say diode matrix programmable. Also, there was apparently a separate VFO for it. It is a strange looking duck. I thought I knew every Icom radio that has ever been built. I had an IC-22, but the 21A just doesn't ring any bells at all. My earliest Icom brochures only go back to the IC-211/IC-701 era which was a little later. Wish someone could come up with a manual for it. I'm really curious.

It's not beyond the realm of possibility that both are true. I can see
where early 2m synthesized rigs might have a diode matrix instead of an 800
position dial, you just set the diodes to use the synthesizer crystals you
need to get the appropriate output frequencies.. just a guess.. ???

To the best of my knowledge it was crystal controled.

The VFO was a DV-21. It was pretty neat..had a big keypad for
frequency entry on the face.

Hi

Having initiated this post I didn't want to create a controversy about
Echolink but simply gathering opinions of pro and cons.
After some days I see that I had to enter the debate to correct some errors.

I see that the subject was developped in depth, with many false comments
about the product too. Anyway, many hams corrected mistakes of others and
give back to Echolink some of its features (i.e. radio connexions when
working with repeaters on 144, 432 and even 2.4 GHz with converters.
Excellent). That proof that the product is well supported and recognized by
the HAM communityn in a much better way that some of its competitors.

I would like to highlight Max's opinion. Indeed many OM continue to work
using both modes : Echolink on one side of their shack and their RTX on the
other side connected to their favorite antennas.

Personally, questionning on Echolink in parallel to this this "poll" through
Echolink, I discovered that a lot of retired OM (not retired from HAM
activities, but from QRM pro, hi !!) are using Echolink quasi daily or so.

This is a good new; that means that even people that we though at first sight be more "oldtimers" oriented, can be also very involved in new technologies and find quickly and easily the utility of this new tool

That also means that our hobby extends to new horizons if we can say that. VoiP is there for long what could happened, and people who do not take the train in course, will stay there, out of the business. Some do not care, OK. So this post is not of your concern. But if you are interested, even from far to new technologies and modes, please take a look at Echolink and... appreciate.
I bet that you will not disappointed.

Besides the offset for repeaters, the xmit xtal freq gets multiplied to
produce the actual xmit freq but the rcv xtal gets multiplied to yield a
freq that in turn produces the IF freq when mixed with the rcvd freq.
Clear as mud?

527. Icom IC-703... what a letdown!

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-18 16:18:39 UTC
From: k5dh@raytheon.com
Message-ID: <zh0Ia.3583$c6.3317@bos-service2.ext.raytheon.com>
Source record: 29300

I was all set to go buy an IC-703, until I learned that the built-in antenna tuner works only with a 50 Ohm coax line! It won't tune an end-fed wire! I'm currently using an FT-817 and LDG Z-11 tuner, and my usual portable antenna is a 50 foot hunk of #20 AWG insulated hookup wire, worked against gnd. After reading the review in the new QST, I am even more disappointed. What a bummer. What was Icom thinking? They went to the trouble of building a rig with portable ops in mind, and then left out the capability to tune a random wire. I hope that somehow the folks at Icom's engineering department get the word. C'mon, Icom, ASK the users what they really need! If LDG can do it, you can, too!

Might Be Ham Radio or Not Ham Radio
1.SSB
2.CW
3.PSK31
4.Pactor
5.SSTV
6.Packet
7.2-SSB
8.6-SSB
9.Contesting
10.FieldDay
11.VHF Contest
12.AO-40
13.IRLP
14.Echolink

These are just a few that one use a computer with,And yet some still say Echolink is Not Ham Radio.Call it what you like,Echolink is a fun mod of amateur radio the way i see it.Fieldday you use computers to log,You use computers to work AO-40 to get the data,Most hams use computers to work CW packet packtor amtor and digital mods.

Yes i say let use the ham bands and all of them,But most of you can not becouse you cant pass the 5 wpm code like most of use have all ready done the 13 wpm code.Any yes if there a national emergency most likely we want be on computers or many even the hf bands.So dont knock echolink untill you have downloaded the software and tryed it.If you dont like echolink then take it off your computer and go fire up your Amp to talk to your friends 75 miles away and bleed all over the bands with your Amp.

Just my Dime worth

I have the manual and the rig in hand. It does say diode programmable but I am not sure what that refers to. Since this is my first radio, I an VERY green and not sure what to look for. I remember back when I was a kid my dad had a Johnston Messenger that was crystal controlled and he was always trying different crystals. This unit comes with 17 sets of crystals. Some are set up for simplex and some for duplex. The DV-21 was available and with that crystals were not required. Just wish I could get my hands on one.

In the manual it states the radio can be operated either 144-146 OR 146-148. All crystals currently installed are between 146 and 148. There are no tubes that I can see (I haven't opened anything but the crystal compartment). The manual also states that it is totally solid state also leading me to believe it has no tubes. The rig looks exactly like the one on http://www.rigpix.com/icom/ic21a.htm . The two little black knobs on top actually are pull pins you use to access the crystal compartment.

Other than that I am not sure what to say but if you need anything else, pictures, etc, let me know and I will be happy to send them along.

Obviously, never trust a webpage.

This was the progression. The first commercial 2meter rigs were
single channel or a handful of channels, with few features. By the
time of the IC-21A, the mode was popular enough that people wanted
all those channels. That then caused the introduction of synthesizers,
because even at the 24 channel level the cost of crystals was getting
expensive.

Rigs like the IC-21A were sort of an end of a line, being impressive
rigs (it looks big, though I'm not sure if that is the reality), when
not long after small (with more features) became the norm.

I didn't bother going through all my magazines, so I don't have exact
dates.

There is an Icom ad in QST for November 1973, on page 137, that shows
the rig. It also shows the IC-230 (67 channels, with a multiple
crystal synthesizer) and the IC-22 (comes with ten crysals). Oh, it's
the IC-21, and I'm not sure what the "A" brought, and while prices are
mentioned for the other two rigs, nothing for the IC-21. It does call
it a "base/mobile" rig. It has a built in AC supply, which likely
accounts for some of its size. There's also an external receive VFO, which
seems to have an analog dial.

QST for July 1974 has an Icom ad on page 117, and it features all
three rigs again, with more of the specs listed. It doesn't say the
IC-21 is crystal controlled, but IC-230's synthesizer is again specifically
mentioned, so surely if the 21 had one it would be mentioned.

The IC-230 is reviewed in that issue on page 43, though there it's labelled
as the Inoue IC-230.

QST for August 1975 has an Icom ad on page 5. By then, it's the IC-21A.
But it's not about the rig, it's about the external synthesizer, the DV-21,
which has the keypad someone else mentioned.

Tektronix 2235 100MHz Dual-Trace Oscilloscope for sale

This is a very versatile and reliable scope in excellent condition.
Great for sensitive analog measurements and also includes many
advanced features including delaying sweep and 10:1 variable holdoff
for high-speed digital troubleshooting.

A few years old but in excellent condition. Comes with power cord but
no probes.

Detailed explanations of all controls can be found here:
http://web.njit.edu/~ransom/Tektronix2235.html

Features
DC-100MHz input bandwidth
5 nS/div max sweep rate
2 mV/div vertical sensitivity
Delaying sweep
10:1 variable holdoff
Advanced trigger with trigger view and single sweep
Z-axis (intensity) input
Very clean and in excellent condition
Extremely lightweight

For auction on eBay # 2539816285
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=2539816285

On rigs like this it may be possible to tune the drivers/mixer to
another mixing product.
This would not be a cool thing do do with an antenna connected !!!

Hi,

Has someone ordered recently (last 2 months) a golden elctroplate badge to http://westid.com/

The servicing looks very very slow if not interrupted (no answer to email, etc) about a callsign ordered more nearly 2 months ago.

As the product is not cheap, it should be really a pity to wast to many dollars...

Thanks
Thierry, LX3SKY

Hi !

I am experiencing the same problem with an IC-703 i bought 05/21/03 at my local dealer here in Hamburg/Germany. Serial# 1201027 .

I checked the antenna with external meter, SWR was < 1:1.5, power supply delivered 13.4 Volts (20 Amps).

At 10 Mhz. (30m) the problem was worst, distorted side tone with keyer disabled and straight key. With paddles/keyer enabled the problem was same as posted by Jerry . On 10 Mhz. it occured below 5 Watts on other bands like 40 meters it only occured at power > 7 Watts. It did not occur at 20m at all. Switching morse keys/paddles did not help.

Other problem with the radio:
On 80 meters, SWR < 1:1,5 i did SSB with 10 Watts ("hi") when i plugged the mike into the socket at the back of the IC-703 the audio was unusable, sounded like HF going into the mike, using the socket at the front of the radio audio was fine.

I hooked an IC-706MKIIG to the same antenna, morse key/paddles and power supply, cranked it up to about 50 Watts, no problems at all. I even did 80m with 100 Watts, no problem at all, same distance to the antenna as with the IC-703.

I brought the IC-703 back to the dealer with exact written discription of the faults to claim the warranty, however i do not have it back yet.

I guess a faulty ground connection in the radio/bad design concerning the ground connection(s).

I think echolink has brought many old hams back into the ranks of 'active'. I'm always talking to hams that talk non-stop about finally being able to be a ham again. Some of them are in retirement homes and some just don't have the money to maintain a system any more.

I got my tech ticket in June 2001 and put echolink on one of our local repeaters in 2002. It's really opened up the traffic on a basically unused repeater. Now when locals go to FL for the winter, or anywhere for that matter, they can get on a link via rf from there and connect back home to PA and keep in touch with family and friends. Free, from their mobile or HT.

Echolink motivated me to learn my code and upgrade. I just got my General ticket a few days ago. Now I can talk to people I've met on echolink over the air. It's a great way to set up an HF DX QSO. Many of the hams in my community are working to upgrade because of their experiences with echolink.

Nomatter what your opinion, many love it, many hate it, and there are many undescided. Sounds like every other fasset of ham radio to me.

Charles,
I wasn't trying to be a smart ass, with a rig that old there are many variables to ensure the rig
is crystaled correctly. I think most of the answers you were looking for have been answered.

Close Michael. The first commercial 2-meter rigs (non-military) were
neither single channel nor xtal controlled. They were
super-regenerative, and the transmit and receive frequency was where
ever you tuned it. They were broad enough that it didn't matter.
Close was close enough. I had one of them, but can't remember the
name. It was very well known at the time. It was kind of the
predecessor to the Gonset Communicator. Similar size and shape box.
A little smaller.

I doubt it. These are mass-market items and techie-types who might want to repair their own unit are an insignificant percentage of the market. Believe what you want, but outside repairs affecting sales was simply not considered to have any significance.

Actually, they were tricky to fix, with lots of discrete components, control loops, etc. We had some amazing techs who could track down just about anything, but we also had lots of units where the fets blew up while attempting to repair them.

Maybe it's a matter of size - the 40KVA inverter that was installed at a local
telecom network lab came with complete schematics and parts lists.

Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

We in need of a a few EF Johnson VHF Challenger radios. Models 7151 or 7161 (15W) ..... 7152 or 7162 (40W) and the 7155 (100W)..... channel capacity ... We'll be happy with a 2 channel, bonus if its a multi channel. We need at least 1 of the monster high power VHF radios for an APRS WIDE Digi ... another of the high power Challengers would be helpful with the repeater but a 15W unit would work just as well with a PA behind it.

Please search your stash and see if you have any of these radios.

Thanks

Oh, Yes! Then he can end up like the State of California with its
38 Billion Dollar deficit.

On topic, though, I don't think the time of year is nearly the cause of the higher ham gear prices as much as the Dollar/Yen ratio, which has been in favor of the Yen for quite some months. Usually, after some months of the Yen gaining on the Dollar, the U.S. dealers finally raise the ham gear prices a bit, which is probably what has happened now.

I used to like ICQ but the spamming technique being used there makes it totally un-worthwile. People will use the request for chat function or instant message function to spam ya. Last couple of weeks that I used it I was getting "hit" that way at least 50-100 times per day, and mostly for porn links that I could definitely care less about.

That UPS is a capital investment, not a cheap, throw it under the
desk unit like 99% of the UPSs in service. And as you said, It came
with them. Equipment that is shipped without manuals generally means
you won't be able to get them.

Track down a full set of manuals for the L3-Com RCB-2000 telemetry
system, and tell me how many people you had to knock down to get them
out of the plant. They won't even give the test techs a full set of
size E schematics, and there is no service manual. If there was, it
would fill half of a drawer in a file cabinet.

That brings up a completely different point of contention for me! Chat programs or other programs (using PC's on the air) is where we have definitely fallen behind as a communications field/hobby.

There are so many services that have dwarfed amateur radio at this point, in regards to digital technology that makes us look like we are in the stone ages. PSK31 is nice, but through a variety of reasons it is primarily only used on HF. It could be utilized on 6 meters where there is some equipment out there for ssb/cw. Technically speaking, it could also be used on FM, as discussed in an article in QST (in a 2000 or 2001 edition, I will look for it again....) for 2 meters or 70cm. There was a experiment done in this article where it showed promise on FM for locally based communications.

As far as packet, that has fallen so far behind, that it is a serious shame. Most of the programs are old, crappy DOS based programs, (am unaware of any Windows based programs) and with incredibly slow transmission speeds and limited file sharing capability, I am surprised it hasn't died out completely.

Other modes of digital communcations, which are in the most basic sense, chat/contact/QSO related, are fine for jsut that, but overall we have fallen behind the mark. Currently there are some cities fairly close to me that have wide-area-internet-service that covers a 20-30 mile radius with speeds of over 20kps, (considering most dialups get 2kps-6kps)
or more and the person can be almost anywhere with that radius and connect. I am not saying we should provide internet access, for those that want to read into that, but can you imagine working a disaster situation, where you have say for instance a dozen different operators able to send digital pics or even streaming video (to a point) possibly even simultaneous to net control or EOC's? Current packet speeds are not worth bothering for regular use, and limited message capability is another issue.

Look at what is commonly used with most law enforcement MDT's, which basically were spawned in part from ham radio packet radio. The are not perfect yet, but the capabilities are phenomenal compared to existing packet capabilities.

I know this is a little different than the intention of the thread, but I think we really need to look at our digital capabilities and see what we could do, work on getting those limitations that we have lifted and designing new and better ways that may make us the envy of other services, and making the technology so good that it may be emulated as other things amateur radio have been in the past such as cellphone technology, mobile data communicators as well as quite a few other technologies the general public now enjoys thanks to ham radio.

Source record: 29330

Hi, although the IC-21A is a good radio it is restricted because of the
crystals.
Yes, you might mix and match them and get lucky that some will work with
repeaters in your area BUT, if you need or want to buy new crystals it will cost
you a decent amount of money to fill all the sockets. It might be more cost
effective to pick up a used, working fully synthesized radio. This might be
cheaper than buying all the crystals.
I saw one on ebay last night. You might want to check it out.
Here is the link if you're interested.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3030750601

Good luck in whichever way you go!

i posed the question the other day at a dealer... supposedly the price
hikes are done simply in response to what ICOM, Yaesu, etc. set as the
base prices the units... one of the things that apparently prevents
deeper discounts on any imported ham gear is that the manufacturers
execute tight controls on pricing, distribution, and so on, with no
middle-tier distributions (as in other industries)...

even the large chains, i'm told, get little in the way of price
discounts even in volume, which means that profit margins on ham gear
are quite slim - no wonder many independents have gone out of business...

amateur radio - an industry killing itself, with little incentive for
growth!

perhaps another reason for high ebay returns and a mental attitude that
used ham gear is worth more than actual value?

On top of that, you have Bush's new Treasury/economic guy who seems
proud of the fact that the dollar is falling in value. It may be good
for exports, but it's hell on imports...

Hi,

Original poster did not ask about anp for 6m, just the radio.

Don't need 100 w to run 6m.

Agreed, newer radio are less expensive then the transverter route,
however, transverter and hf radio less expensive then dedicated 6m radio.

Thanks to everyone that replied. I sure have lots to consider.
Unfortunately being in Canada, it is not easy to get someone to ship a rig over the border and not many "inexpensive" rigs around here. I think I will try and set it up for one or two repeaters and not worry about the rest of the channels. Perhaps pick up a mobile for the time being.

Thanks again
Charles

Hi, although the IC-21A is a good radio it is restricted because of the crystals.
Yes, you might mix and match them and get lucky that some will work with repeaters in your area BUT, if you need or want to buy new crystals it will cost you a decent amount of money to fill all the sockets. It might be more cost effective to pick up a used, working fully synthesized radio. This might be cheaper than buying all the crystals.
I saw one on ebay last night. You might want to check it out.
Here is the link if you're interested.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3030750601
Good luck in whichever way you go!
73, Mark

Charles Cosby wrote:
I have an Icom IC-21A that has room for 24 sets of crystals. My question is what is the difference (if any) between the transmit and receive crystals?
Any help would be appreciated

Nope. Yasee the Peoples Republic of California elected a
BORROW-and-spend Democrat with fiscal policies like Reagan's and Bush's
- policies that lower the dollar's value relative to the yen and thus,
as you said below, raises the number of dollars we pay for Jap-made
gear.
>
> On topic, though, I don't think the time of year is nearly the cause of
> the higher ham gear prices as much as the Dollar/Yen ratio, ...

Right! and what makes the dollar worth fewer yen? Why Bush's trillion
dollar deficit of course.

Of course the guy's an idiot, for using multiple posts rather than posting
one single one with all the things he has for sale, and for posting ads
in a newsgroup intended for discussion.

But you didn't help things by posting the same reply to all his ads. You've
just made the clutter twice as bad, like the guy who keeps posting stuff
about killfiles.

Next time, just resond to one of the guy's junk posts.

Kachina went out of business, but Doug Smith, the guru of that
company, went to Ten Tec. You might visit their web site. You'll find
a Ten Tec that works with a computer, the Pegasus. And all of their
other newer transceivers, are highly digitized, too.

There's equipment readily available for doing cw and ssb up through 47GHz.
Joe Taylor's WSJT software has largely usurped psk31's effectiveness for
narrow-band, truly weak-signal DX communications, whether tropo, EME or meteor
scatter.

Hi all.

Justto say I carry most softwares for PSK, MFSK, SSTV, RTTY, CW, PACKET, or any other mode which uses software for a pc soundcard.

Recently DigiPan has been update to include MT63, Logger has been released in 32 Bit format, MixW is now at version 2.08.

Call in anytime.

Hard to say. But it does seem prone to problems with rf on the
chassis/feedline, etc. And it's low power too which should normally
help avoid problems like this. Not really good... But still, I'd make
sure it's not an antenna or feedline problem where you have excess
common mode currents. Be aware that SWR and common mode currents have
no relation. You can have a perfect match, and still have poor
decoupling from the antenna to the feedline. MK

597. TSM-1333 question ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-19 19:02:55 UTC
From: K5VSE <k5vse@voltage.net>
Message-ID: <_FydnXHGzdVnlW-jXTWcpA@voltage.net>
Source record: 29220

Hi to the list,

Does anyone know anything about an antenna, marked :TSM-1333" ?
I have got one, but have no idea what frequency it is cut for. Can find no information anywhere on the WEB.

Any help appreciated

Thanks

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

It operates very nicely. serial number 5L460080. Has the TXCO-1 master oscillator unit, BPF-1 band pass filter unit, and the following filters (some optional some not):

XF-455K-262-01
XF-110C (455KHz center freq.)
XF-455K-202-01
XF-8.2M-262-01
XF-8.2M-501-03
XF-8.2M-202-01
XF-8.2M-251-01

Does the full 200 watts out. I have the hand mic and manual. Ordered a shipping box from Yaesu Parts for it today (6/19/03). I will consider trades. This rig had a tuner placed on top of it by the previous owner. It has several scratches on the top of the case (replacement from Yaesu is $86.03 & shipping). I have pictures for anyone interested. Will sell for $1700.00 Plus shipping. Home phone is 217-442-5202 Cell is 217-260-8337.

73,

We run chat over NET/ROM here, and could run any of the
tcp/ip based chats as well ... but there is near zero interest.

90% of the users are "stuck" in the 1984 world ... they use some
VT100 emulator program to read and send messages at 1200 baud.

The other 10% use 9600 or 19200 links, run IP as well as AX.25,
and are starting to use 13 cm links (811b) that support both IP
and AX.25. The big question is how to convince that first 90% that
faster links make more interesting applications possible :-)

All the above are easy to run over ham radio.

But as mentioned in another post, there does not seem to be
much interest in doing these things. Hams seem to be mostly
stuck in the early 80's paradigm.

From the EchoLink home page:

"EchoLink is software which allows Amateur Radio stations to communicat
with one another over the internet, using voice-over-IP (VoIP) technology.
The program allows worldwide connections to be made between stations,
from computer to station, or from computer to computer. ..."
Does not require a radio.

Now do you understand?

Hi Mark !

Mark Keith wrote in <25eb70d7.0306191040.3ef1fc3e@posting.google.com>:

> What kind of antenna and feedline?

Antennas: Vertical groundplane "Fritzel GPA-50" covering
10,15,20,40 and 80 meters. It has 1/4 wave radials (one each band),
except 40 meters, which is covered by a shortened dipole and 80m,
there i use a large copper counterpoise which is running aroound my
penthouse shaped patio, i live in the 5th floor, the copper thing is
kind of sealing at the edge of the floor and runs arround the whole
house. Works pretty good an 80m... Since my landlord does not like
HF beams i am stuck to the vertical, however i get quite good results.
I used that antenna from my shack with abt 30m "Aircell-7" coax feedline,
there the problem with keying appeared on 40m (the dipole) and 80m
as well. I do not have any problems with my "big" radio (IC-756pro)
with that setup running 100 watts, i do not have a PA.

Other antenna was the "MP-1" portable antenna, set up at the edge
of the patio fed with abt 6m "RG58" coax feedline and adjusted
to decent SWR (<1:1,5) on 30m and 40m band, i do not have the ex-
tension coil for 80m.

I used the internal tuner of the 703 at 40m only, since SWR on the dipole
is not very good, pruning did not help to get it below 1:2,5, however
i do not have any problems with the 756pro using the internal tuner,
the tuner of the 703 "accepted" that as well, but the problem occured
on 80m as well, where i do not need a tuner at all within a rather
small portion of the band, that portion i used with the 703 when the
keying problem showed up.
The IC-706MKIIG i hooked up to the antennas described above did not
show any problems at all cranked up to 50 Watts, 100 Watts at 80
meters.

> Hummm. That would tend to make the 703 look awful picky about rf...

It looks like.

> Hard to say. But it does seem prone to problems with rf on the
> chassis/feedline, etc. And it's low power too which should normally
> help avoid problems like this. Not really good... But still, I'd make

> common mode currents. Be aware that SWR and common mode currents have
> no relation. You can have a perfect match, and still have poor
> decoupling from the antenna to the feedline. MK

Well, the IC-706MKIIG did not show ANY problems with the setup
described above running 50 Watts and higher, so think there is some
flaw within the internal design of the IC-703, thats the reason
i decided to claim the warranty.

613. earphone usage problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-19 21:23:48 UTC
From: jthofte@ofir.dk
Message-ID: <e82a619b.0306191323.5f6bc1f9@posting.google.com>
Source record: 29235

After starting usage of the Koss Plug earpnone I have immediately
experienced ear pain similar to ear inflammation, that has nothing to
do with sound level but seems to be caused be the simple fact that a
foreign object has been introduced into the ear canal. I also noticed
an increased sensibility
to noise in the environment after using the ear phone, especially very
low frequencies emanating from passing by cars caused pain.
I would be interested in hearing about similar experiences since I
have
to find a solution to noise problems in my work office environment.
From information found on the web I have been inclined to think that
earplug-like earphones were the best solution, but maybe I have to
find another solution.
Best regards
Jens Thofte

I turned on my Henry this morning..... stood up to check the tubes and the fan and the tubes shut off. as if there were no power. I checked the relay switch..... when I reset it, it blows it agn. the fan and front panel lights are on, but no power to the tubes. anybody ever experience this? If so, what are the options in order to get it back in line?

bill

Because it can be hooked to a radio to transmit over the airwaves. By limiting echolink to licensed users, the control operators of the radios that could be accessed over the echolink have some minimal assurance that only licensed users will be transmitting over their radios.

50 watts to 100 watts = 3 dB = 1/2 "S" unit.
35 watts to 100 watts = 4.5 dB = 3/4 "S" unit.

Hardly worth the time, effort and expense.

hi bill...take the tubes out and try again. if all is well i would think one or both tubes are bad. the 3-500z tubes can develop grid to filiment shorts. when the tubes are out, check for shorts from pin to pin. you should have continuity on the filiment pins but nothing from filiment to grid or plate. all tube elements are seperate from each other. good luck and be carefull with the high voltage! 73...george [n9ird]

Some people are sensitive/allergic to the foam used in some of these,
and special hypoallergenic foam might be a better choice.

Too much volume through a well seated earphone can also be a problem.

You don't need a license. You just need a callsign to fool the guy who
passes out the node numbers into thinking you do have a license.

And you don't need a QSL manager either.

An increase in "S" unit doesn't neccessarily match up with how much my signal actually improves. An "S" unit is just a general measure. By doubling my power my signal to a weaker station will improve, especially on SSB where audio is more important than signal strength.

627. HTX-10 Loses Memory

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-20 02:14:18 UTC
From: fmmck@aol.com
Message-ID: <20030619221418.03168.00000875@mb-m03.aol.com>
Source record: 29150

I can program the HTX-10 and everything seems fine. If I leave the radio disconnected for 3 days or more, it reverts to the factory default of 29.300 MHz NBFM on all channels.

I did a Google search and found one similar posting from back when the radio first came out. Unfortunately there were no responses listed. Does anyone know what might cause the memory loss?

I looked in the Albrecht AE-485 diagram and found a part called "CON401", that I suspect is a very high capacitance/low voltage storage capacitor. I would expect it to run down eventually, but don't think it should in only three days.

The device is connected to a point that is fed through a diode from a regulator consisting of a 78S05 regulator with a single diode from its common terminal to ground. To me, it would appear to be a 5 volt source. I wonder if a 4-cell NiCad battery connected to that point would over-charge with 1.25 volts per cell? Perhaps a cordless phone battery would be available that would solve the problem!

Thanks for your thoughts.

Could be that the radio uses some sort of battery backup to maintain the
settings when it's disconnected from power and leaving it disconnected for 3+
days may exceed it's capability for keeping the settings.

From: Max <ve3tmt@yahoo.ca>
Message-ID: <Tkula.15544$h7.1678887@read1.cgocable.net>
Source record: 29152

I'm looking to trade my excellent condition FT900CAT HF mobile for a FT100 or Icom 706 series radio. I just don't have room for two radios in the car so my 2m only mobile will have to go. Comes with power cord, mic, original manual. Read the reviews on eHam.net on this great rig. I hate to part with it but due to limited operating abilities on HF from home (antenna restrictions), I want to go HF mobile, but want to keep 2m. This radio has the optional Collins SSB filter installed and is easily a 9.5/10. Has YSK900 separation cable and mount. I can forward pictures to interested parties.

Thanks for reading.

To get over 100 watts out, you're probably going to have to go with
separate amps.

My AES catalog has a Mirage BD38 with 4 watts in/80 watts out on both
bands. That's the closest I see.

You either don't pay close attention to what's been going on in this country and the world, or (more likely) you need to take an economics class. There's a lot more causing our fiscal problems than the current deficit spending.

Sure, you can send Morse code over the internet. Read about
how we did it here:

http://kh2d.net/kh7r/

To send Morse code with Echolink, all you gotta do is hook the
oscillator from a keyer to the sound card input. Piece of cake...

But then to find anybody who could RECEIVE it on Echolink might
be another problem.

I understand you are being selective. You obviously didn't see (or refused to admit) that the
program is also meant to interface with radios, like IRLP, which runs on Linux interfaces connected
to amateur radio repeaters.

The program is NOT EXCLUSIVELY ONLY VOIP WITH NO RADIOS ALLOWED AT ALL. If it were, it wouldn't be
ham-only.

Mincing words. "Optional" DOES NOT EQUAL "won't be used because nobody uses options."

Look. My common sense tells me that as long as radio is USABLE as part of the method, it does not
mean that the method is totally faulty as serving as a ham radio method. This debate will never end,
will it?!?!?!?!?!

> definitely fallen behind as a communications field/hobby.

I think there is an answer to all of it. The general ham population is simply not going bother with modes and technolgies which are simply reguritations of what they can get with a $15/month dialup connection. Ham radio will survive by being able to do what the Internet cannot do. However this is a swamp with no end because it involves personal preferences and perceptions which in turn makes ham radio unique amongst the radio services. Comparisons with what the other services are doing with advanced technologies therefore are generally moot when it comes to ham radio.

It's a people "problem" and we all know that far-end technocrats historically do not fare particularly well in this field. Been there, done it and I quit beating my brains out long ago.

> As far as packet, that has fallen so far behind, that it is a serious shame.
> Most of the programs are old, crappy DOS based programs, (am unaware of any
> Windows based programs)

Most packet activity today is concentrated in the 2M spots networks and the software is integrated into the Windoze computer logging programs. Look up Writelog and DX4WIN for examples.

> and with incredibly slow transmission speeds and
> limited file sharing capability, I am surprised it hasn't died out
> completely.

It's far from dead but it has "degenerated" into a boring-as-hell but quite useful utility mode for HF dxers and contesters of all flavors.

Nobody in these groups swaps files around on the air, why would they when they can do that on the Internet orders of magnitude faster?

The 2M spots nets are however currently threatened by the more recently available Telnet spots systems. But using a Telnet node involves hanging online for the duration of the contest, typically for 48 hours at a crack. Plus there are still bogus spot filtering problems, etc. Many are not willing to do Telnet so they continue to tune a neighborhood 2M spots node. In this local region we have about 250 regular spots net users and about eight 2M nodes.

Does anybody have any info on the above, I have one, but can find no info on it. Any help much appreciated.

Do you know what the outputs are on the back, they are unmarked on mine, I have a coax input, 2 outputs and 2 pairs of wire terminals and a single ground (apart from the Ezitune connections). There is a pair of black and a pair of red terminals, I expected to have the ground side of a pair distinguished, and I am assuming that the pairs are for high and low impedance matching, but don't know which way.

What I want to use it for is to tune a wire as an antenna, I am restricted in what I can use (conservation area in our "world heritage site" city!!!!) so need to run something around the plastic guttering - any ideas would be great.

There can be more reasons than that. I'm not operating from a twenty year old perspective, and I have that same amount of interest in those chats.

There you have it. The keyword is interesting. If something interesting comes around, people will go to it. We shouldn't have a blind spot regarding our favorite portion of the hobby.

How about the heavy hitter-- TE systems amplifiers. quite pricey, price scares off most
limp dick
hams, however if your going to compete with the big boys be prepared to pull it out all the
way and
lather some sun block on it. those amps are by far the most dependable on the market.

Don't have any ambition to "compete with the big boys". I'd just like to bring up the power a little on those two bands. I don't understand why they keep the power down to 50 watts on 2m and 35 watts on 70cm with the FT-100D. It's 100w up through 6m.

Yup, mine does the same thing. Must be normal. Well, what do I want
for $50.00? Doesn't have enough memories to care about it much anyway.
Sure wish the sunspot cycle was on the rise instead of headed for the
toilet.

Good luck getting practically totally reliable VoIP on dialup. I tried. I failed.

So does EchoLink, if you choose to use it via RF, that means you you require a radio, and RF is
utilized, making it fulfill your original criteria.

As a relation:
Guns can kill people, but one can choose to injure a threat non-lethally if aimed at a certain point
of the body. Obviously, they are also used for non-threatening purposes (sport shooting). Does that
mean that they are not dangerous weapons? Hardly.

Might possibly be that particular ISP. I subscribe to two different ones,
both dialup. On one of them I can almost never get a hookup. Something in
their firewall system interferes. On the other one I can always get a
practical, reliable hookup. The odd thing is that the one that works is the
"busier" system.

I used the unit with an AC supply. It was my experience that I could
switch off the radio and keep the power supply on and the radio would
always retain memory. But if I turned the PS off for a period of time,
it would lose memory.

Here are a bunch of items for sale. Prices do not include shipping.

Signal Corps U.S. Army Test Set Frequency Meter Test Set I-129-Bï¿½ï¿½ï¿½.$150

plus shipping
Military set of James Millen wavemeters covering 1.5 to 40 MHz.
Excellent condition
http://members.cox.net/radiostuff9/wavemeters1.jpg
http://members.cox.net/radiostuff9/wavemeters2.jpg
http://members.cox.net/radiostuff9/wavemeters3.jpg
http://members.cox.net/radiostuff9/wavemeters4.jpg

Two Individual James Millen Wavemetersï¿½ï¿½ï¿½$25 plus shipping
One covers 3.5-6 MHz, the other covers 18-40 MHz. The plastic cover
on one is broken
http://members.cox.net/radiostuff9/millenwm.jpg
http://members.cox.net/radiostuff9/millenwm2.jpg
http://members.cox.net/radiostuff9/millenwm3.jpg

U.S. Army Signal Corps Flame Proof Key J-5-Aï¿½ï¿½ï¿½.$65 plus shipping
Flame Proof Key J-5-A made by L.S. Brach Mfg. of Newark, NJ. This is a
W.W.II key in very good condition.
http://members.cox.net/radiostuff9/flameproofkey.jpg
http://members.cox.net/radiostuff9/flameproofkey2.jpg

Turner P-9D Dynamic Microphoneï¿½ï¿½ï¿½.$40 plus shipping
Dynamic Microphone made in Cedar Rapids, Iowa. This mike works and is in

Very good condition externally with a small tear in the cloth
http://members.cox.net/radiostuff9/p9d2.gif
http://members.cox.net/radiostuff9/turner_dynamicmike.jpg

National Type ACN Dial - New in the Box.....$65 plus shipping
http://members.cox.net/radiostuff9/type_acn.jpg

National Type MCN Dial - new in the boxï¿½..$60 plus shipping
http://members.cox.net/radiostuff9/mcn.jpg
http://members.cox.net/radiostuff9/mcn2.jpg

Large Millen Dial - New in the boxï¿½ï¿½..$20 plus shipping
http://members.cox.net/radiostuff9/millendial.jpg

National HRO Drive .....$45 plus shipping
Good condition - no box.
http://members.cox.net/radiostuff9/2ndhrodrive.jpgg
http://members.cox.net/radiostuff9/2ndhrodrive2.jpg

National Black PW Dial - $75 plus shippingï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
Here is a chance to replace that chipped up dial on your HRO receiver.
These look to be new. No box - a couple of very tiny paint chips
http://members.cox.net/radiostuff9/hrodial.jpg
http://members.cox.net/radiostuff9/hrodial2.jpg

RCA Capacitance Testerï¿½ï¿½..$35 plus shipping
Capacitance tester from the 1940's. Uses a magic eye tube reflected with

a mirror.
Working but needs a power cord. I checked it with a cheater cord
http://members.cox.net/radiostuff9/rca_captester.jpg

Three RCA Pocket Reference books for the 1940's and 1950'sï¿½ï¿½..$12 plus
Shipping. Condition is fair to good. The cover on the 1946 book is
missing a very
small piece of the back cover. They are:

1945 Tube Reference Book - Tucson Radio Supply stamped inside
1946 Electron Tube Reference Book - Tucson Radio Supply in gold
on cover
1953 RCA Reference Book (Tubes, Batteries, Parts, Test Equipment)

- Radio Parts of Arizona, Phoenix
http://members.cox.net/radiostuff9/rca_books.jpg

Barker and Williamson Coil Mounting Barï¿½ï¿½..$15 plus shipping
http://members.cox.net/radiostuff9/bwcoilbar.jpg
http://members.cox.net/radiostuff9/bwcoilbar2.jpg

Eimac 450TH/VT-108 Transmitting Tube - $150 plus shipping
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/450th.jpg

Triplett VTVMï¿½ï¿½ï¿½..$40 plus shipping
Works but needs to be calibrated. Good cosmetic condition.
http://members.cox.net/radiostuff9/triplettvtvm.jpg
http://members.cox.net/radiostuff9/triplettvtvm2.jpg
http://members.cox.net/radiostuff9/triplettvtvm3.jpg

HAL Computer RTTY Interface CRI-200....$75 plus shipping
Older HAL unit in excellent cosmetic and working condition. No
documentation but it can still be obtained from HAL.
http://members.cox.net/radiostuff9/hal_cri200.jpg
http://members.cox.net/radiostuff9/hal_cri2002.jpg

Heathkit Electronic Switch Model S-2 with original manual....$25 plus
shipping
http://members.cox.net/radiostuff9/heath_switch.jpg

You can check my user ID "n7rk" on Eb*y
for a reference as to dealing with me.

Thanks for looking and 73,

Dave N7RK

Eh what?

Why are you against Ham Radio?
Some irrational fear of RF perhaps?

Any linear is a bit of CB gear; used by CBers who lack
the technical skills of weak-signal operation.

Final transistors are more expensive as you go up compared to HF finals.

73 wyle

I don't understand why they keep the
power down to 50 watts on 2m and 35 watts on 70cm with the FT-100D. It's 100w
up through 6m.

Made in 1955, by Gamble-Skogmo, Inc. apparently of Chicago (?). Included
in this kit are:

The stranded copper wire for the "flattop" -my guess is about 75 feet
(Instructions say Aluminum, but sure looks Copper to me).
A roll of insulated lead-in wire, probably about the same length.
A pair of porcelain strain insulators.
A pair of "screw eyes" for anchoring the ends.
A brass gizmo for connecting the lead-in to the flat-top.
A pair of porcelain "nail knob" stand-off insulators.
An under-the-window lead-in strip with fahnestock clips at each end.
A beautiful Knox porcelain lightning arrestor with mounting hardware.
A heavy-duty ground clamp for ground-rod or water-pipe.

Just in case it rains the day you get it, you can sit inside and read bits
of the packing material: Chicago Daily Tribune, Thursday, Aug. 18th, 1955.
The Indians lost 9 to 3. Indians? What about the Sox?

Ends Sunday, Jun-22-03 18:43:33 PDT (Monday 01:43:33Z)

<< Looking for some help getting a working microphone for my Heathkit HW-2036 >>

Bruce-

I suggest you contact Don through http://www.d8apro.com/heath1.htm, and ask him.

Older Heath equipment used a high impedance microphone, often with a ceramic element. The HW-2036 is newer than any I'm familiar with, so it may use a low impedance microphone, around 200 to 600 Ohms (common CB Microphone!). Either way, I think a good microphone of either type should produce at least a trace of audio. If not, then you may have another problem that must be fixed first.

We use a number of their wide band amps at work and they have a
reasonably good performance. Probably not as good as ENI, R & S or
Agilent and similar, but then not as expensive; and certainly better
than some Italian CB rubbish I was once shown.

Nah, I've been on tons of dialup ISPs. What I meant by reliable was the bandwidth. 56k dialup
download bandwidth, at it's absolute fastest, was 3 kb/sec. So figure the upload was worse than
that. This was with the receive window optimized and the speed verified on DSLreports.com.

Piping through VoIP is troublesome with 3 kb/sec down, and worthless to try with any less, in my
varied ISP experience.

<< I am looking for the instruction manual for the Kenwood TS-850S HF Xcvr. >>

Tom-

I looked at the Kenwood web site, http://www.kenwood.net/. They have a lot of stuff to download including service notes for older models, but the only manuals are for current models.

I did find part of the service manual at http://www.mods.dk/, if that would help.

If you are talking about an optical encoder, as used for tuning many radios, that would be available from Digi-Key. The terminals would be V+, channal A, channel B, and GND, not necessarily in that order. A 32 bit Quadrature encoder is about 30 dollars. If the rig uses a mechanical encoder, which I doubt, it would be about 4 dollars.

In the IC-745 the encoder is mechanical, the problem is often that it is a
great
problem finding replacement that can be fittet instead of the old one, both
the
mechanical and electrical data should be right. If the encoder is
mechanical,
similar to the one in the 745, take it appart and clean it.

Regards Max

The local Icom technician who looked at my 735 said it is a 4-wire
optical encoder. The 735 used 4- and 6-wire versions, and the 4-wire
version is no longer available from Icom. I guess the question is
whether the encoder from Digi-Key would fit the tuning mechnism of the
735. I'll check around the net a little more to see if I can get specs
on the encoder you've mentioned. Thanks for the lead.

My problems with the 703 are not as severe. I have no problems using the iambic paddle or straight key. I have problems using it with keyboard sending. I use an optoisolator 4N35 with a diode an 1.2K resistor.

No problems using the same circuitry and keyboard with my 706MK2G with the same coaxial connection to the antenna. And it does work transmitting into my MFJ 969 tuner's dummy load.

I can get it to work with 3.5 watts of power or less.

Apparently it is an RF problem and probably a design problem with the 703 and grounding.

Would be interested in finding out what ICOM says about this problem.

It does seem to be design related if you all are seeing the same
thing. It's pretty picky if you have to reduce to 3-4 watts to avoid
problems. I also have a 706mk2g, and I haven't really had any trouble
with it either in that regard. If they couldn't resolve the problem, I
think I would get a refund. Hopefully, they will be able to deal with
it once they nail down the exact problem. MK

Not sure. You want to be very careful you don't pull a pin loose from
the base. You can fix them if you do, but it's kind of tricky. You
actually may have more of a problem with the socket than the pins
themselves. I assume your heater pins are the ones acting up. Maybe a
real fine file carefully used? Sand cloth? MK

I could do that, but I'm sure it won't. If I can't trip a repeater
that I can see from my house, I can't imagine it would trip anything
else. I might do that anyway with my TH-F6A just for drill.

Thats the reason i brought my 703 back to the dealer to claim the warranty.
A radio what is made for outdoor/portable use must not be such sensitive to
stray HF since in portable/outdoor conditions the operator often has to
deal with a "compromise" antenna system.
However i am still waiting to get it back, i ll let you know about the
results...

Some relatively current radios have the capability of pulling tones from
the on-air signal.

A couple of things come to mind.

1- Are other people getting into the repeater???
2- Can you get into the repeater with any other radio???
3- Are you getting any audio out of the radio at all (with or without tone)???
4- Can the radio open a tone coded receiver such as your HT or another nearby mobile????
5- Have you checked your antenna to make sure its working???
6- How is the signal back from the repeater??? (full quieting, noisy...etc etc)???
7- Are you able to access any other repeaters, tone or non-toned???
8- If you know anyone with a service monitor, they can help a LOT in troubleshooting this.

Just a few thoughts.

I am sick and tired of you whiner puss boys on this subject its OLD news boys. If you dont like it dont use it simple as that. I am sure some of the whiners are waiting for the CW to be dropped totally too so they can get here Gen tickets. But wait there is more..... They it will kick in to oh my these written tests are to hard, to unrealistic bla bla bla. Bite me babies. I could of waited a few months to get the easy road 5wpm (helen keller speed, she could pass) but I took the 13 and passed with flying colors and proudly display my csce on the wall for all that 5wpm whiners to look at when they come over. I have run a echolink gateway before it was echolink. When it was I-Link. I still on occasion turn on my 10 meter FM link but do prefer HF only ops and no links. IT does however suit its purpose well and I do use it to talk to a few friends I met in the UK.

Have forsale an Icom ic-765 xcvr with Sp-20 spkr and Sm-6 microphone.
765 is just back from Icom service for a tuneup and will furnish copy of
receipt.
radio has 6 kc, 2.4 kc, and 500 hz filters. has pbt tuning mod.
have original manual and real nice copy of service manual plus alot of info
copied from the internet and such. have all original packing boxes. asking
$1100 for all. would rather have equipment picked up in phila. or will meet
within 150 miles of phila.
765 has a 5xxx serial number. can also demo on air 160-10m. John
w3ayt@arrl.net

736. Radio Shack HTX-10 Memory Backup Test

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-23 03:44:00 UTC
From: fmmck@aol.com
Message-ID: <20030622234400.03168.00001029@mb-m03.aol.com>
Source record: 29059

Radio Shack HTX-10 Memory Backup Test

The Radio Shack HTX-10 Ten Meter transceiver has a circuit that feeds 5 volts DC to the memory, even when the unit is switched off. When completely disconnected from a power source, voltage to the memory is maintained by the charge on a 220 MicroFarad capacitor. When disconnected from a power source, the voltage discharges in two or three days to the point where memory contents are lost.

It was found that memory contents were still being maintained when voltage had dropped to around 1.5 volts. Therefore, a 3.6 volt Lithium cell with a series diode should maintain memory indefinitely by keeping the voltage from dropping below about 3 volts. The following test was devised to see if memory can be maintained for a long period of time when the radio is disconnected.

Based on the Albrecht AE 485 S Front-and-Jumpers.pdf file in the sch_ae485s.zip file at http://hamradio.online.ru/sch_eng.html, there is a pair of contacts on the front panel's PCB called "Reset Contact Fields". These contacts are believed to be CON401, shown on the AE 485 S diagram as being connected directly to the memory voltage. They were chosen as the most convenient points to connect the battery and series diode.

A Radio Shack 23-037 3.6 Volt Lithium cell was chosen, to be mounted in a Radio Shack 270-401A single cell AA battery holder. A 1N4148 diode was chosen because it was available. Any low leakage silicon diode should work. The black lead from the battery holder (negative) was soldered to the contact further from the RF and Microphone gain controls (called "Channel SW" in the Front-and-Jumpers illustration). The diode's cathode (band end) was soldered to the contact closer to the RF and Microphone gain controls. The red lead was soldered to the diode's anode. The battery holder was mounted to a nearby open area on the main PCB using sticky-back tape. A couple of loops of Scotch tape will do.

That's all there is to it. Why didn't the manufacturer provide a battery in the first place? Maybe there is a good reason that will show up over time. More likely it was deleted to save money!

741. Re: IC-706 MKIIg Tone Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-23 05:04:39 UTC
From: KB7M <kb7m@arrl.net>
Message-ID: <SRvJa.534$nf2.154788@news.uswest.net>
Source record: 29064

The IC-706MkIIg has separate tones for encode and decode. When I first got mine, it took a few minutes to figure out that I had programmed the decode tone, but not the encode tone, and was therefore transmitting the wrong tone. The problem is that they don't call it encode/decode. I finally solved the problem by encoding BOTH tones the same, since few repeaters require a different tone for RX vs TX.

But that would depend on the flashlight. Cheap are easy to find, but
if the one you bought is significantly bright, that might be a problem.

Radio Shack here in Canada has a couple, from a tiny one using two button
cells to a regular size one using AA cells.

I found two types of cheap LED flashlights at a big hardware chain here,
both for about five dollars. One was tube shaped, rather like the cheap
laser pointers, and the other was sort of saucer shaped. Both used
3 button cells (the one I bought uses the same type in the cheap laser
pointers, and it's cheaper to buy those than the batteries). If I
remember, these seemed to be cheap knockoffs, and the store had
similar but higher priced units also.

Hiking stores seem to carry various LED flashlights, going from cheap
to expensive. They also have LED bike lights that might be useful
as flashlights, and seem to carry a lower price.

Fairly well made, better than the Microwave Modules stuff. As others have said
it will only really be linear if under driven by about 30 or 40 percent. Very nice
if driven with an FT817, for instance. This really only matters for CW or SSB use.
In FM you can drive it with the full 10 W. You will get around 75 W out for 6 W in.

Our local Target has them -- not *that* cheap, however -- in the camping/hiking dept.

I bought a set of three (different sizes) at BJs (membership warehouse store) for $20.

That's interesting. I will look into that. Meanwhile, I have
apparently solved the problem by reprogramming a couple of times. Not
sure what I did, but can't argue with success. :-)

BTW, this problem only occurred recently after I had spent a while on
20-meter SSB. Then, the next time I tried to access the repeaters I
couldn't. Very strange, but OK now.

Craig, as I understand it, 2 versions of the optical encoder were used
on the Icom 735. A 4-wire version on the early rigs, and a 6-wire
version on the later rigs. My rig uses the 4-wire encoder.

In looking at your pictures, it looks like there are 6 wires coming
out of the encoder. And the plug has 6 holes. Otherwise, I'd give you
the $45 for "buy it now."

Thanks much anyway,

Bob

SO YOU NEED MONEY... AND NEED IT NOW!!

THIS IS THE FASTEST... AND FAIREST... WAY I KNOW TO SHARE THE WEALTH!

Would you like to make thousands of dollars quickly, legally, and with NO CATCH?

PRINT THIS ARTICLE NOW

Then keep reading... please take five minutes to read this article in its entirety... it will change your life. It has certainly changed mine!

PRINT THIS ARTICLE NOW

You can make up to, or over, $50,000 in only 4-6 weeks. I was browsing through these newsgroups, just like you are now, and I came across an article similar to this that said you could make thousands of dollars in only weeks with an initial investment of ONLY $5! And, like you, I thought, "Yeah, right, must be a scam...". Yet, I was intrigued... like most of us are...and so I kept reading. Anyway, the article said that you were to send $1.00 to each of the 5 names & addresses listed. Then POST the article in at least 250 newsgroups (there are thousands) that was all you had to do.

So after thinking it over and talking to a few friends first, I decided to try it...after all, if it really was a scam all I would lose would be my $5 and the cost of 5 stamps, right...? Well, guess what... within 7 days, I started getting money in the mail... No kidding! I have to tell you, I was surprised to say the least. I still figured it would end soon and didn`t give
it too much thought. But then money kept coming in...tripling in numbers and multiplying by 10 and 20 times the amount that I got the first week! In my first week I made about $20 or $30. But by the end of the second week, I had made a total of over $1,000!! In the third week, I had over $10,000, and it`s still growing. This is my fourth week and I`ve made about $42,000 TOTAL...and the money is still coming in.

Let me tell you how this works and more importantly, WHY it works...also, make sure you print a copy of the article so you get the information off it and can begin making money yourself. The process is very simple and it consists of just 3 EASY STEPS:

STEP 1: Get 5 separate pieces of paper and write the following statement on each sheet of paper:

"PLEASE, PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER _____" (Number based on list below)

Include your name and address. Then get five $1.00 bills (US) and place ONE inside each piece of paper that you just wrote on and fold the piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal mail with money in it will get yours!). Put one folded note (with your $1.00 bill US) inside the envelope and seal it. Do the same for each of the five names. You should now have 5 envelopes sealed, EACH envelope has a piece of paper with the message asking to be put on the mailing list and a $1.00 bill (US) hidden inside the paper, RIGHT..? This is IMPORTANT.... Make sure you have written the message on each sheet of paper... by doing this you are creating a service and keeping everything PERFECTLY LEGAL... Now, mail the envelopes to each of the 5 addresses listed below:

1. J. Keyes, 9419 Geranium Av, Fountain Valley, CA, USA 92708

2. K. Fouche
3090 Via Marina Crt.
Oxnard, CA 93035-2442

3. E.Vieira, Apartado 891
8500-918 Portim&#65533;o, Portugal

4. A. Figueiras
Av. S. Jo&#65533;o de Deus, 43 - 2&#65533; Esq.
8500-508 Portim&#65533;o, Portugal

5. S. Berggren
6228 Bowness Rd, Apt # 302
Calgary, Alberta, Canada T3B 0E3

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3 etc..) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you feel you need to edit.

STEP 3: Post your amended article...with your name as #5... to at least 250 newsgroups (I`m told that there are close to 35,000 of them!) and all you need is 250 or so, of them.

HOW TO DO THIS -- If you have Netscape 3.0, do EXACTLY the following:

A) Click on any newsgroup like you were going to look at it, then click on "TO NEWS" which is on the far left when you`re in the newsgroup page. This will bring up a box to type a message.

B) Leave the "Newsgroups" box like it is. CHANGE the "Subject:" Box to something flashy like... NEED CASH $$$ READ HERE $$$... or... "FAST CASH!!"

C) Tab once and you should be ready to type. Now, retype (only once) this entire article ... WORD FOR WORD ... except to insert your name at #5 and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same however!

D) When you`re finished typing the entire article, click on FILE in THIS box (just above the SEND button... (NOT where it says NETSCAPE NEWS on the

first box). Now click on "SAVE AS" in the dropdown menu. Save your article as a text file to your C: or A: Drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU HAVE SAVED IT! Once saved, move on to Step E below.

E) If you still have all of your text, send or post to this newsgroup now by just clicking the "SEND" button (just below the "FILE" dropdown menu and just above the C: button)

F) Here`s where you`re going to post to 250 or more, newsgroups ... OK... click on any newsgroup then click on "TO NEWS".. again, in the top left corner of your screen. Leave the NEWSGROUPS BOX alone again, put a flashy subject title in the SUBJECT BOX, hit TAB once and you`re in the body of the message. Now click on the ATTACHMENT button (just below the Subject Line). Another window will come up...click on PROCEDURE. Click ONCE on the file and then click OPEN and then OK. It appears in the Attachments Box, and it will be highlighted. IF YOU USE ie: EXPLORER, it`s just as easy ... Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same time to copy the article. Then print the article for your records to have the names of those you will be sending the $1.00 bills to. Next, go to the newsgroups and press "POST AN ARTICLE". A window will open... type in your headline in the SUBJECT area and then click in the large window below. Press "CTRL" and then "V" and the article will be placed in the window. If you want to edit the article , you can do so and then highlight and copy it again (so your edited article will be copied again and again to each newsgroup). Now, every time you post the article in a new newsgroup all you have to repeat is "CTRL" and "V" and press POST.

G) That`s it! Each time you do this, all you have to do is type in a different newsgroup so you can post this message to 250 or more, DIFFERENT, newsgroups. I know, I know,... you`ve still got 249 to go!Don`t worry, each successive article will only take about 30 SECONDS once you get the hang of it. Remember, 250 is the MINIMUM ... The more you post, the more money you will make!

That`s it!... THAT`S ALL THERE IS TO IT ... JUST THREE EASY STEPS !!! You are now in the mail order business and will start receiving your $1 envelopes from various people all over the world within days. REMEMBER...The more newsgroups you post to, the more money you will make! You may want to rent a P.0. Box eventually because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "Manager" or "Investor"...

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT, PLEASE.

Now... let me tell you WHY this system works... Out of every 250 postings, let`s say I only receive 5 replies... doesn`t seem like much, does it? However, you will make $5 cash.. Not checks or money orders but CASH... with your name at #5. Each additional person who sent you $1 now also makes 250 additional postings with your name at #4... This is 1000 postings. On average then, 50 people should send you $1 with your name at #4 ... That`s $50 CASH in your pocket! Now these 50 people will make 250 postings with your name at #3... that`s 10,000 posting! Average return would be 500

people... that`s $500. Each of these people make 250 postings now with your name at #2..... that`s 100,000 postings ... average 5,000 return at $1 is $5000! Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list! And that`s only if everyone down the line makes only 250 postings each... REMEMBER?... The more postings you make, the more money you make!

People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS of NEW honest users and NEW honest people who are joining the Internet and newsgroups every day and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, EVERYDAY, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this WILL WORK... I promise you. You just have to be honest. Make sure you print this article out RIGHT NOW (if it`s not done yet).

Also... try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

REMEMBER... HONESTY IS THE BEST POLICY... YOU DON`T NEED TO CHEAT THE BASIC IDEA TO MAKE MONEY!!

Good luck to all. Please play fairly and you will reap Huge rewards from this! By the way, if you try to deceive people by posting the messages with your name on the list and not sending the money to the people already on the list, YOU WILL NOT GET MUCH RETURN! Someone I talked to (mean and cheap) just did that and he only made $150 after 7 to 8 weeks!! Then he sent the five $1 bills out... people added him to their lists ... and in 5 weeks, he had OVER $10,000! He than realize that there is no way to cheat with himself.

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT SPENDING ANYTHING BUT FIVE DOLLARS AND A LITTLE OF YOUR TIME!

DO IT LIKE IT`S LAID OUT HERE... IT WILL WORK!!

764. Re: 4-wire encoder, Icom 735

Bob,
I am looking at it now and it is the 6-wire version. I can't find my IC-735 service manual right at the moment, but I am quite sure it is an easy modification to change from one to the
other. I'll look for it again. I'm quite sure it describes both types.

I bought the unit from ICOM but then I fixed mine by replacing a part on the control board attached to it.

73,
-Craig, AA0ZZ

Usually repeaters don't transmit a tone for your RX to decode. If you have it set up to require a
decode tone, your RX will block the repeater's output.

768. Best price for Icom T7H?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-24 00:07:51 UTC
From: news@ungulate.net
Message-ID: <b90788e9.0306231607.58c89437@posting.google.com>
Source record: 29091

Hi Everyone,

I just received my call sign today! KC2LQY! I hope to be on the air soon. I am looking for a reasonably priced and fairly powerful HT. The Icom T7H is the one I am considering.

The best price I've found for it is $174.95 shipped. If you have found a better price, or have a better suggestion for an HT please let me know. (I'd be buying 2 if that helps)

If anyone has this or a similar dual band HT for sale or trade, I would be interested. Have working 75 Watt VHF Motorola Syntor radios with complete heads.

Thanks,

Oryx

That goes without saying, but it doesn't explain why the 706 could
access repeaters, then a couple of days later could not, without any
changes to the settings. Other radios of mine had no problem
accessing the repeaters, even an HT. Something in the 706 seemed to
go temporarily bonkers.

I have this radio, it's a nice solid radio, and works very well. However,
the repeater shift seems to be set up for 200KHz instead of the more common
600KHz.. is there a way to change the repeater shifts on this radio?

TIA

<< I have this radio, it's a nice solid radio, and works very well. However, the repeater shift seems to be set up for 200KHz instead of the more common 600KHz.. is there a way to change the repeater shifts on this radio? >>

Brenda Ann-

I have the Six Meter version of the radio which came with the manual for the FM-2033. According to the manual, the FM-2033 came set for 600 KHz from the factory. There is a small circuit board called the "Initialize Unit" on the bottom side of the radio. It is a diode matrix board with various parameters set by diodes. There should be two diodes for 600 KHz: one for 200 and one for 400. It sounds like your 400 KHz diode is either open or has a bad connection.

The board unplugs, and has diodes on the opposite side (same side as the connector). There are five and a half groups of 4 diodes. If you hold it with the connector at your lower left, the second group from the left is called OFFSET, and consist of places for D5, D6, D7 and D8. It appears that D6 is the 400 KHz diode, and D7 is the 200 KHz diode, with D5 and D8 positions empty.

Does this help?

Remember if you are operating out of memory mode you can tune the
memory channel and change band and modes. This however should not
affect what you have pre programmed into the memory channel.

I find myself tuning my memory channels, changing bands and such all
the time. I may have tuned down to 20 meters SSB. If I rock the memory
channel selector switch one channel up or down then back I will have
returned to the preprogrammed memory. I have messed up my HF
communications several times by grabbing the wrong control ending up
on 2 meters when I wanted 20 meters etc.

If I tune the radio back, via the main tuning knob and band switches,
to the repeater frequency, many times the tone encoder will have shut
off since I was in SSB mode not FM. So all of this is to point out the
functionality of the 706. The tuneable memory channels can throw you
for a loop and cause you some " trouble " that might not be there.

Generally the tone encoder shuts off when you are in SSB mode. Also
remember the tone encoder is used on the VFO that you are transmitting
on.

A quick way of returning to a preprogrammed memory channel from a
tuning of the memory is just to rock the memory channel selector
switch up or down one channel and back while in memory mode.
Once you return this way, not via the main tuning knob and manual mode
selection, the tone encoder should be once again turned on.

As I remember there is no separate tone encoder module, the decoder
was a separate module though on the 706 MKII, and came installed on
the 706 MKIIG. I am not sure if the decoder module took over the
generation of the encode tones, some Icom models is did and some it
did not.

The original tone encode is developed within the main CPU on the 706
and 706 MKII. I am not sure if this is the case for the 706 MKIIG

Hope this makes sense.

Sure they are.....the mechanical encoders are very cheap, while the optical encoders are right at the 30 dollar mark, for 32 bit per revolution Grayhill units. It is the 64 bit units and up that cost real money. I have been using these encoders for years, in my homebrew designs. If you can find them on the surplus market, they are even cheaper. A few years back, I took a trip down to the Electronics Exchange, down in St. Louis, and bought 40 of the Bourns 128 bit units for $1.50 each. They were listed in the Newark catalog for 110 dollars each. The whole point is, they are not as expensive as manufacturers would have you believe.

The important thing is to make sure whether you need a Quadrature encoder,
which would be a 4-wire unit, or an encoder that has Gray Code output.

Thats the way I do it usually. On mine, I almost always stay in memory mode 99% of the time. I rarely ever use the VFO's. Only as scan edges, etc...I set mine up so the memory switch is the "bandswitch" on mine. I started at #1 for 160m, and store a memory for each band in order, using my likely favorite freq, mode, etc for each other band. When I "tune" the band, I'm almost always tuning the memory. A flip of the mem knob, and I'm back to where I started. The VHF/UHF freq's are all stored in the same way on higher channels. I flip the mem channel, and I'm all set with tone, offset, etc...Hit a knob and goof up, just reset the mem. Running the radio in this manner, I'm always properly set up, and if I'm not, it's fixed in 1 second by resetting the mem channel. I also use memory scan a lot on VHF/UHF. I rarely use the band up/down buttons. Don't really need them the way I do it. MK

780. Radio choices?

Message-ID: <d03iZwcXbXOo-pn2-Cymd5fltCbL9@localhost>
Source record: 29003

My local radio store has the following used tranceivers available (at least the ones I am interested in) Icom IC-746, Kenwood TS-570SG, Yaesu FT-847 and a new Yaesu FT-920 that is also in consideration. I've read the reviews, seen some comments in the news groups but I would like comments and opinions from users of these radios as well.

I am leaning toward the IC-746 with the TS-570 very close.
My current radio is a venerable kenwood TS-440 that I have used since 1990 but I want something newer.

Thanks

John

Hey, you have the same ads in your neck of the woods... Guess what i did, Mr 807? I picked up a pair of 1625's at a flea (they're basically 807's with 12V (annoying, huh?) fills & weird base), and re-based them with regular octal bases, 'cos I only had *one* 7-pin base that fit them (came from the back of an RCA scope toob) Used regular cheap-o epoxy as base glue, and had them running all- out in a silly SE[fake]T stereo amp on a 0-30kHz sweep for half an hour - the epoxy holds... Thus far I'm running tinto all the probs I run into with 6bg6's, and then some. In short, the tubes talk to each other (there's about 2 inches 'tween them, and plate wires are not shielded - sticking your hand 'tween them killse the crosstalk), will oscilate at several MHz when driven hard at low freq's (perfectlyy shaped oval RF bursts at the leading edge, minute changes in wiring layout kill them - i'm thinkin' of trying RF chokes at the plate caps - works with *other* sweep toobs...). Fred, I think your fave toob is a *sweep toob*. Now, whatddaya' have to say to *that*, hmm? They shoo' look right, though, real retro...

Cool! So you now have a 12BG6. Aren't very many of those in the world!

> Used regular cheap-o epoxy as base
> glue, and had them running all- out in a silly SE[fake]T stereo amp on a
> 0-30kHz sweep for half an hour - the epoxy holds...

Cool! I went the other way recently, and plunked a couple 832A's on
bases from dead 807's (even the toob world has organ donors), both sides
wired in parallel. So that basically gives me 807s with twice the Gm and
half the plate resistance. And a really odd-looking thing it is, looks a
bit like R2D2 perched on a garbage can.

> Thus far I'm running
> tinto all the probs I run into with 6bg6's, and then some. In short, the
> tubes talk to each other (there's about 2 inches 'tween them, and plate

I suspect that effect is related to the RF oscillation issue you discuss
next...

> will oscilate at several MHz when driven hard at low freq's
> (perfectlyy shaped oval RF bursts at the leading edge, minute changes in
> wiring layout kill them - i'm thinkin' of trying RF chokes at the plate
> caps - works with *other* sweep toobs...).

Yeah, that can help. Screen stoppers are very important, right at the
socket, with no bypass on the socket side of the resistor.

> Fred, I think your fave toob is
> a *sweep toob*. Now, whatddaya' have to say to *that*, hmm?

It certainly can be used for that. In fact, the original 6BG6 was just
an 807 plunked onto an octal base. They musta had lots of them left over
and were trying to find new markets. "Hey let's plunk it on an octal and
sell it to the TV guys! They haven't been around much, and won't realize
that we're pawning off war-surplus 807's on 'em."

Surely you've seen this:
http://www.dogstar.dantimax.dk/tubestuf/gzot.htm . I'd contemplated
entering it in the currently ongoing r.a.t. "ugly amp competition",
except that it's not an amp. Well, actually, the 807 part of it is an
amp... it's the 6C4 that's the oscillator. Hmm...

> They shoo'
> look right, though, real retro...

Don't they just? You gotta have bright red plate wires. CRT cable is
just perfect for that. btw- you can form it into shape using a hot-air gun.

Cheers,
Fred

Searching for Hallicrafters I.F. transformer, part number 050-300531.

Was used in many common receivers such as S-120, S-200, SW-500, and other AA5-based models. Part number is stamped on the can. Does anyone have a junker chassis that could offer up this part for me? Please contact me direct; remove the symbols from the address below.

Thanks,
Joe

Hardly "Cool". In fact, quite the opposite - quite
hot to the touch.

Why don't you package the separate amplifiers together in a case, add two
of the diplexers and then you have your dual-band amplifier. That was what
was being suggested.

789. For Sale Amateur Radios and Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-24 16:59:20 UTC
From: Jim B <kc9id@arrl.net>
Message-ID: <Ir%Ja.109098$XI.2049482@twister.rdc-kc.rr.com>
Source record: 29012
Cross-posted to: alt.ham-radio.hf,alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

I have the following Amateur Radio equipment for sale.

Kenwood TS-2000 with duplexer original manuals, boxes $1250

Kenwood TM-D7/G VHF/UHF handheld (When used with TS-2000 Sky Command you can control
the 2000 remotely) $350

Kenwood TS-830 $350 very good condition

Kenwood TS-530 $300 excellent condition

Kenwood VC-H1 Visual Communicator with cables case and software $300

Icom 706 MKII $575 Includes separation cable, mobile bracket

Kenwood MC-50 $35

Kantronics KAM Plus (version 8) with cables $125

Shipping method and costs will depend on buyers preference. All of these rigs were operated in a
non-smoking environment and are in good working condition.

I would consider a clean late model Kenwood TS 50 in trade on any of these rigs.

791. FRAUD ALERT for Dale Kight NH6VR

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-24 18:03:00 UTC
From: gdion@engineer.com
Message-ID: <13582197.0306241003.388a0bed@posting.google.com>
Source record: 29014
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

This is a friendly reminder that Dale Kight, NH6VR is again
fraudulently posting ads that state he has equipment for sale. Upon
receiving payment, he then dissapears. This has just happened to me
after he posted some equipment for sale through the FT817 yahoo group.
Seems he is repeating his history of three years ago. I have been
collecting a fair ammount of information about and evidence against
Dale to use in court. If anyone else hears of his renewed activity,
please let me know. Wish I had known of this two weeks ago...

He has historically used the following e-mail addresses:
nh6vr@yahoo.com (current)
nh6vr@aol.com
nh6vrdale@aol.com
dale@kight.com
drkight@webtv.net

You can easily find his spam through searches of Google groups.

He operates a repeater by said call in Maui, Hawaii.

He owns a store called "Treasure Island" two blocks from his residence
in Maui.

He also has a record with the US Postal Inspection Service documenting
past mail fruad claims.

Court documents relating to restraining orders and garnished wages
against him can be found at the Hawaii State Judiciary website at
http://www.courts.state.hi.us/index.jsp and by searching for "Dale
Kight".

So, let this serve as a warning to steer clear of Mr. Kight unless you
too want to become engaged in legal claims against him.

-Gary, N4TXI

792. Yaesu MD-100A8X Microphone pinout

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-24 19:23:53 UTC
From: ersirn@hotmail.com

Source record: 29015

I will be attempting to interface a Yaesu MD-100A8X microphone to a Yaesu
FT-101. Can anyone provide me with the pinout to the microphone? I would be content with just getting the PPT and audio working but I believe if I can also provide a supply voltage to the mic via an external source I may be able to get the filters in the mic working also. The freq up and dn are not an issue since the FT-101 does not have this capability.

I am seeing more and more Scams on the internet swap pages these days. I thought I had checked out the last guy that I was buying a rig from enough to send him or her a US Postal Money Order .. but I did not check far enough. You think that it will never happen to you. That is what I thought, but I was wrong. Your local Police Department will take your Theft by Deception report and then tell you that it is out of their jurisdiction and to contact the FBI Internet Fraud Division, they will just send you to a site on the internet to fill out a damn form, The much talked about and feared United States Postal Inspectors will just send you a form in the mail to fill out and it contains these encouraging words:

"Postal Inspectors base mail fraud investigations on the number, substance, and pattern of complaints received from the public. While the Postal Inspection Service can't guarantee that you'll recover money lost to fraud, the information can help alert Inspectors about new fraud schemes and prevent others from being victimized."

So I guess my $650.00 report will go to the back of the bus on the bottom of the stack.

Also the local Police Department in the town where the thief lives will tell you they can not do anything unless your local PD requests it. But we have learned by now that it is "out of their jurisdiction".

SO.... I have learned by this experience that unless you loose a $ 500,000.00 or get scammed 5,000 times, just go fill out the damn forms and shut the hell up.

This is just my experience and opinion and just FYI, (for your information).
Please do not email me and tell me what I should have done unless you are sending money in your attachment. :-)

PS: I also reported my Fraud to the Attorney General of Arkansas and signed it:
Arkansas Voter. That might be the only one that will look in to this Fraud.

This is K5JOE saying Happy Hammin', watch your back, and keep one hand on your billfold. Only buy from people that have been on the swap pages for a while with a good reputation.

I will offer my services to receive equipment and payment for that equipment and check the rigs out on my bench before shipping them on to the buyer and sending the payment to the seller... Might charge 5%

to the buyer and the seller over the shipping cost but it would be
better than paying $2000.00 for a rig that did not work or sending
money to someone that will steal it and not send you anything.

If anyone is interested in doing that let me know... I am tired of
seeing all the thieves get over on everyone and get off scott free...

SCAMMED in LITTLE ROCK, K5JOE
73 and Happy Hammin' to all

Hi all, Im trying to put an odd step on the UHF side.
I want to use 442.735 to receive and 448.650 for TX
and store this into memory.
Is this possible? I'm not sure how to change the step or
the repeater shift to accomplish this, other than the stock
settings which I can't change. Any clues???
Please e-mail me direct at: mrrusso@optonline.net

THANKS FOR YOUR HELP!!

Your local Atty. General's Office only works on white-collar criminals and city-folk who are intimidated by "the law". The Atty. General will send a letter to the offender telling him/her that you have the right to sue them for the monies owed if they do not pay/deliver.... then your scammer will not answer the letter, and the Atty. General will send you a letter telling you the scammer didn't answer and you may now sue him/her. The End. Big Help.
Go down to your courthouse and file a civil suit against the offender, or speak with the District Attorney about criminal charges.
"Jurisdiction" has nothing to do with it... local cops don't handle civil matters, are usually in the dark about borderline civil matters such as yours, and will almost always tell you there is nothing they can do, but if annoyed enough, they'll take your complaint and you will at least have a case number. They can't arrest you for asking to file a compliant... every day... sometimes twice a day..... :-)
That will get the ball rolling.
rb

Why the choice for the T7H, out of curiousity...

Check out the Yaesu FT-530, it's an older HT but has pretty much
all the bells/whistles of newer HT's, dual display, dual receive, cross
band repeat, etc etc... I sold mine years ago, and have kicked myself
for it ever since, until now, I found one on eBay with loads of accessories,
so I am happy again. :)

If you can get it for that, and it being brand new, I would take it!!! They usually go for a minimum of $199 or more.

The only thing I would have liked to see in the radio, is at least the ability to transmit on one band and recieve on the other. For example, TX on 70cm, recieve on 2meters. Other than that, I really like the HT.

Hi, cool radio, a friend had one a long time ago, way ahead of it's time!
Anyway, a communications Specialists PL should work fine.
The model number is SS-32P if or use the SS-64, this is the newer one and costs $29.00. Or in you want an external unit with a rotary switch, get the TS-64, that's $55.00.
This PL uses a dip switch to set the PL frequencies.
AES or HRO should have them or contact Com Spec direct.
Here is the link.

http://www.com-spec.com/index1.htm

The PL's are on the left side, just click on them.

Anyone with the above rigs hearing a loud spur on 137 KHz? My 746 does
this and a report of a 746Pro also doing it.
Anyone with a 756Pro that can check?

Thanks,

Dale W4OP

There is no argument as to what Amateur Radio is -- According to the FCC (the only one that matters) , Amateur radio is a service and it has a basis and purpose
URL: http://www.arrl.org/FandES/field/regulations/news/part97/

Anything else is in the eye or ear of the beholder such as hobby, etc. No where in the FCC rules/regs does it say hobby.

This shud stir up some controversy

Here are a bunch of items for sale. Prices do not include shipping.

Heathkit HW-8 QRP Transceiverï¿½ï¿½ï¿½$125 plus shipping
A very clean HW-8 that works well on both transmit and receive. The main
tuning knob has some minor damage. As shown
in photo. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/heathhw81.JPG
http://members.cox.net/radiostuff9/heathhw82.JPG
http://members.cox.net/radiostuff9/heathhw83.JPG
http://members.cox.net/radiostuff9/heathhw85.JPG

Heathkit DX-40ï¿½ï¿½ï¿½$100 plus shipping
Good front panel, case needs repainting, has the crystal door. Wiring is
clean inside and all of the tubes are good. Correct
knobs on the front but missing the knob for the crystal switch. The
transmitter appears to have a blown power transformer
but includes a non-Heathkit replacement which is rated 600 volts CT at
200 mA. Includes a photocopy of the manual
http://members.cox.net/radiostuff9/heathdx401.JPG
http://members.cox.net/radiostuff9/heathdx402.JPG
http://members.cox.net/radiostuff9/heathdx403.JPG
http://members.cox.net/radiostuff9/dx40.jpg
http://members.cox.net/radiostuff9/heathdx405.JPG
http://members.cox.net/radiostuff9/heathdx406.JPG

Lionel J-38 Telegraph Keyï¿½ï¿½.$50 plus shipping
The J-38 was made by a wide variety of manufacturers including the
Lionel
Electric Company, the same company that made Lionel Electric Trains.
This key is in nice condition. The photo shows the
Lionel "L" stamped into the back side of the base.
http://members.cox.net/radiostuff9/lionelj38.jpg
http://members.cox.net/radiostuff9/lionelj382.jpg

Two Individual James Millen Wavemetersï¿½ï¿½ï¿½$25 plus shipping
One covers 3.5-6 MHz, the other covers 18-40 MHz. The plastic cover
on one is broken
http://members.cox.net/radiostuff9/millenwm.jpg
http://members.cox.net/radiostuff9/millenwm2.jpg
http://members.cox.net/radiostuff9/millenwm3.jpg

Heathkit Electronic Switch Model S-2 with original manual....$25 plus
shipping
http://members.cox.net/radiostuff9/heath_switch.jpg

Turner P-9D Dynamic Microphoneï¿½ï¿½ï¿½.$40 plus shipping
Dynamic Microphone made in Cedar Rapids, Iowa. This mike works and is in

Very good condition externally with a small tear in the cloth
http://members.cox.net/radiostuff9/p9d2.gif
http://members.cox.net/radiostuff9/turner_dynamicmike.jpg

RCA Capacitance Testerï¿½ï¿½..$35 plus shipping
Capacitance tester from the 1940's. Uses a magic eye tube reflected with
a mirror.
Working but needs a power cord. I checked it with a cheater cord
http://members.cox.net/radiostuff9/rca_captester.jpg

Three RCA Pocket Reference books for the 1940's and 1950'sï¿½ï¿½..$12 plus
Shipping. Condition is fair to good. The cover on the 1946 book is
missing a very small piece of the back cover. They are:
1945 Tube Reference Book - Tucson Radio Supply stamped inside
1946 Electron Tube Reference Book - Tucson Radio Supply in gold on cover

1953 RCA Reference Book (Tubes, Batteries, Parts, Test Equipment) -
Radio Parts of Arizona, Phoenix
http://members.cox.net/radiostuff9/rca_books.jpg

Barker and Williamson Coil Mounting Barï¿½ï¿½..$15 plus shipping
http://members.cox.net/radiostuff9/bwcoilbar.jpg
http://members.cox.net/radiostuff9/bwcoilbar2.jpg

Eimac 450TH/VT-108 Transmitting Tube - $150 plus shipping
http://members.cox.net/radiostuff9/450th2.jpg
http://members.cox.net/radiostuff9/450th.jpg

Triplett VTVMï¿½ï¿½ï¿½..$40 plus shipping
Works but needs to be calibrated. Good cosmetic condition.
http://members.cox.net/radiostuff9/triplettvtvm.jpg
http://members.cox.net/radiostuff9/triplettvtvm2.jpg
http://members.cox.net/radiostuff9/triplettvtvm3.jpg

HAL Computer RTTY Interface CRI-200....$75 plus shipping
Older HAL unit in excellent cosmetic and working condition. No
documentation but it can still be obtained from HAL.
http://members.cox.net/radiostuff9/hal_cri200.jpg
http://members.cox.net/radiostuff9/hal_cri2002.jpg

You can check my user ID "n7rk" on Eb*y
for a reference as to dealing with me.

Thanks for looking and 73,

Hi All,
Does anyone know anything about switching off the ctcss tones
on this set?

i have found the excellent www.superiorsignals.co.uk which shows how
to manually move the 8 446 channels and also change the ctcss tones
but the 446 set my family use don't have the ctcss facility on it.

so they hear me but i only hear them if i keep the monitor button
pressed.

can i switch off the ctcss facility off on the kenwood?

thanks...scanman

Have you tried setting it to CTCSS tone Zero ?

Otherwise it could be like the old Motorola T200,
you can't switch off the CTCSS

844. Kenwood TS570 support ?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-26 19:57:19 UTC
From: Thierry <lombrytNOSPAM@hotmail.com>
Message-ID: <3efb501b$1_1@news.vo.lu>
Source record: 28917

Hi,

Do you remember the emitting problem we have found using the kenwood
TS-570D/G series ?
(in SSB while the built-in digital VU-meter displays 100W an external
quality watt-meter displays only 60 W - using the default handheld micro,
probably dynamic but very few dynamlic ! - In CW this is 90W or more. I
would like to know how many watt are really emitting at the end of my coax
of nearly 100m long !!! That will soon sounds like a QRP station !!).

NB. Theoretically it is possible to improve the power using an electret mic
(kenwood MC-80) but it is not sure. It seems also that the "varidiode" is
set to the maximum. So * THERE IS * a problem on those RTX that do not
really emit their maximum barefoot power, whatever say advertisings !!

If you don't beleive me, measure by yourself with a quality external
watt-meter...

So, to get confirmation of this problem, and I hope a solution, can you
someone out there tell me is there is an email address or a form available
on any Kenwood website that could help me to enter in contact with the
technical support of Kenwood about that problem ?

Thanks in advance

Thierry

Could this just be a meter type issue?

If the built-in digital VU meter is designed to read peak power output,
and the external meter is an average-reading meter, this sort of
difference is precisely what you'd expect to see when transmitting
voice using SSB.... and the fact that you'd see a much lower
difference between the two when transmitting CW is also to be expected.

You'd have to take a look at the circuitry in the two meters to see
how they react to signals with rapidly-varying amplitudes.

I would not be at all surprised if the built-in digital meter has a
"fast attack, slow-to-moderate delay" characteristic... it might hop
up to the full 100-watt reading on a voice peak lasting only a few
milliseconds or tens of milliseconds, and then drop downwards over
periods of ten to hundreds of milliseconds. This is quite common for
electronic meter circuits, which sample a voltage (in this case, the
rectified RF) via a diode, and feed it to a capacitor shunted with a
resistor.

External wattmeters with D'Arsonval moving-vane readouts are usually
physically incapable of deflecting with such high speeds... the
inertia of the "brute matter" in the vane and coil assembly won't let
'em, and they've usually got some amount of damping (electrical or
mechanical) to prevent the needle from being slammed around. Meters
of this sort will react to the average power level (averaged over a
period of many milliseconds to several seconds), and they must be
expected to read a good deal lower than a peak-reading meter when
handling voice.

On the few occasions I've seen somebody use a Bird 43 wattmeter, it's
looked to me as if it took on the order of a second to deflect from 0
up to the actual power level. I've got a somewhat-similar wattmeter
built for the Navy (an Electro Impulse TS-3499/URM), and it takes
more than 5 seconds (!) to deflect from 0 to full-scale when sent an

unmodulated FM carrier.

You have to add _more_ circuitry to an electronic metering circuit to make it emulate a D'Arsonval meter movement. Many manufacturers don't bother, both because it adds cost, and (I suspect) because it makes _worse_ the problem of people complaining that they're not getting full power out of their transmitters when they send SSB voice.

I was just reading through the ARRL's "FCC Rule Book" section on overmodulation and splatter last night, and the text commented that the difference between average and peak-reading meters is often in the range of 3:1 up to 10:1 on typical voice signals. I imagine it depends a lot on the meters in question, and on how much compression or other voice processing is being used on the SSB signal in question.

The 10% difference you're seeing on CW is probably within the calibration error limit of a typical ham-grade wattmeter.

>If you don't beleive me, measure by yourself with a quality external
>watt-meter...

... and make sure that you're comparing apples to apples (CW to CW, or SSB to SSB using meters of identical attack/decay characteristics).

I think you're very probably comparing apples to oranges. You're being mislead by the different electrical/mechanical properties of the two types of meter (peak-reading vs. average).

In other words... it's very possible that you don't really have a problem. If your transmitter is actually "peaking out" at or near 100 watts PEP on your voice peaks, then trying to increase your microphone gain to boost your average power is likely to overdrive the transmitter during peaks... you'll end up "splattering" signal outside the necessary bandwidth, and your voice signal will be pretty nasty to listen to.

If you want to boost your average power without overdriving and splattering, consider using your existing mic with a good (internal or external) compressor or equalizer or speech processor. Play around with the settings of this device.

Consider that the goal is _not_ to get your average power up as close to full transmitter output as possible! The goal is to get maximum speech intelligibility at the far end, without mucking up the band for other users. Overdriving your input, or overprocessing your signal will hurt more than it's likely to help!

To find out how many watts get to the antenna put a wattmeter at the
feed point - easy.

If I use a remote tuner at the antenna then both meters read
the same.

I can use the internal tuner to match the rig to the feedline and my
TS570 will happily pump out 100W, but a short distance down the line the
impedance will be different on different frequencies and sometimes the
SWR/power meter will read different values.

As an extreme example I tried - the internal turner will match to
the feedline on 30 meters with a 40 meter Vee. The meter in the TS570
reads SWR 1.1:1 and Power 100 Watts. About 3 feet down the feedline the

SWR and Power are totally off scale.

I don't doubt that many fraudsters hang out on ebay, but I have done OK so far. I usually check the seller's feedback rating before bidding, but on the one occasion I forgot and discovered later that the seller had a Zero rating (i.e., this was his first offering on ebay -- or the first using that ID), everything was fine.

The closest I came to getting burned was on a $500 item, but the seller's local police dept. got in touch with me before I had gotten round to starting any serious investigation of my own; I got all my money back. Even then, it may have been stupidity rather than criminal intent on the seller's part: he offered for sale items that he did not yet have in stock, and then found that he could not get them.

Hi,

No more of a breeding ground then the local hamfests, swap meets or local
newpapers
qth.com, eham.net arrl.org etc...

If I get taken at the local hamfest, you will never know about it, on Ebay
everyone hears
about a scam from the usenet.

It is easy to get caught up in auction 'excitement' and the thrill of
'winning'
we have to remember it is a purchase (or sale) just like buying a car or
ordering dinner out.

Feedback is the key, I have dealt with many new ebayers, even I was a new
ebay guy.
my first deal was a purchase for $ 400 from an established seller with 100 %
feedbacks.

Just ask a lot of questions on the items you want to buy, if you don't like
the answers, just pass it up.

Nice thing, if the item is not sold it can be relisted and you can get
another chance or
another seller will have what you want.

Did I tell you about the time that used car dealer sold me that car that was
driven by his mother ?

> >Trev G3ZYY

Against all advise, the RN spent mucho pounds on sophisticated jamming equipment at the expense of "hard kill" weapons. These jammers worked as promised. When an Argentine pilot fired a missile at a Brit frigate the frigate's EW system responded automatically and decoyed the missile around itself ... unhappily onto the troop ship it was supposed to be defending!! The good news is that the troop ship had unloaded but some aboard suggested that "frigate" was derived from a similar Spanish word of appropriate meaning.

I suspect the same logic is behind keeping telegraph keys ... (c:

Making room for other rigs and the C21 is the first to go. This is the analog model.

Coverage is 80-10 meters (no WARC), built-in PS, 2.5, 1.0, .5 KHz filtering, QSK, puts out 30-40W (per spec) or crank down for QRP work. Has sidetone and zero offset built in.

Front panel is perfect, vinyl top has some shallow scratches. Recently aligned and PTO re-built at Ten Tec. Comes with color-matched calibrator and single paddle keyer, original C21 manual. Will not break up the set.

$195 + actual shipping charges (doesn't weigh much) by carrier of your choice. No packaging fee.

More shack cleaning. Willing to part with the trusty TR7/PS7/RV7 and accessories as described below for $650 + actual shipping, no packaging fee, by carrier of your choice.

Works perfectly, 160W+ on the lower bands 100+ on the high bands, built for a CW op (you can easily swap the narrow filters for broad ones if you use it for SSB). True blue lamp filters. Couple small (1/4") scratches on face, so have to give it an honest 8/10 for cosmetics. The PS7 needs paint on top, so 7/10 (stick it under the desk). Selling all as a package here first, on eBay if no takers, will not break up. You can sell off the parts yourself.

TR7 (s/n avail. on request)
non-sticky black finish, DR7 readout
General coverage xmit/rcv (trace cut mod at factory, no AUX-7)
NB-7
Filters: 1.8, 1.0, .5, .2 KHz
24 VDC fan (very quiet), have original FA-7 cover
Original manual
Original box

PS7 - what can I say, works FB. Comes also with 24 VDC fan and FA-7 cover.

RV7 - refurb'd PTO, smooth as silk, 9.5/10 face, no scratches. PTO in TR7 is fine, just wanted to work split.

MISC - New set of non-factory TR7 extender boards, misc. TR7 circuit boards (from working TR7 whose case was damaged), TR7 service manual copy

Thanks for reading.

UPDATE

Guys, it seems I may be eating crow, but after two weeks I have
received my radio. Let it be known right now that nobody is more
shocked than I. While this situation does have a happy ending, heed
these warnings which are good for both buyers and sellers, which I

have learned (and should have noticed):

1) Always search someone's history before engaging in a transaction. I'm net-savy, and even I didn't think to do this. What was I thinking? A five minute search would have saved me many sleepless nights.

2) Moneygrams just feel "seedy". At least I didn't send a moneygram, but given that I was asked to send it in the name of a "rush account", it should have screamed to me "this will be difficult, if not impossible, to trace!"

3) Money orders do -not- protect the buyer. You can file a claim with the postal inspection service, but unless you lost thousands, your claim will sit in a file.

4) Be weary when addresses you're told don't match what's listed on QRZ.com, or other online references.

5) "Recall of Mail" forms are not guaranteed to work. This is a form you can fill out at the post office in hopes of having mail you sent returned to you.

6) Getting your money from someone is expensive, if not prohibitive, to do on your own. Had I wanted to pursue Dale, I would have had to hire a lawyer and fly to Hawaii to go to court.

I'm sure there are other lessons as well that will sink in as time goes by. But even though my situation worked out, I look back and see many, many signs that should have kept me from sending any money in the first place. I was stupid (some will say I still am, just not quite as much) :)

For now, I'm glad the nightmare is over. -Gary

ps. if anyone has questions or comments regarding my situation, feel free to e-mail me directly in addition to the group, as I don't always hit the newsgroups often.

871. Icom R71A Hissing Sound?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-06-28 00:44:02 UTC
From: Gary Brown <gbrown@nc.rr.com>
Message-ID: <mx5La.98255$_w.5563047@twister.southeast.rr.com>
Source record: 28944

I'd appreciate any hints on a very intermittent hissing, squealing-like noise that comes from the bottom of my R71A.
It goes away when compressed air is injected into the louvers in the bottom cover, at the rear of the receiver, in what I suspect is the power supply area.

No smells, no effect on receiver operation whatsoever. Problem happens after receiver is on for awhile and sometimes goes away with a power cycling.
Meter light flickers a bit during the hissing.

I suspect the hissing isn't actually coming from a suspect capacitor, rather it's the noisy voltage making a nearby inductor vibrate.

Still looking for a warm, or bloated capacitor.

Thanks,
Gary

Two weeks??? How did you have it sent? USPS and UPS ground could very
easily take that long from HI to the mainland. I've seen UPS ground take
7-8 days from Oklahoma to Washington..

If you look at any of the "Next Day" or "Second Day" services, you
will note that that number of days is only guaranteed for certain
areas. If either end of the transaction is outside those areas, it
will take longer.

Ground service will of course take even longer.

Happy trails,

I am looking for the circuit diagram / schematics of the Sony ICF SW1
recevier. Sony Switzerland is unable not help me out !?

I am will to re-imburse costs for copying/scanning/posting.

I want to attempt a modification to tap off the IF signal in order feed
it into an add-on mixer, and from there into a laptop's soundcard with a
software decoder to receive DRM broadcasts, see
www.drm.org
http://home.t-online.de/home/sat-service/sat/DRM/DRM.htm
http://www.drmrx.org/receiver_mods.html
http://www.tu-darmstadt.de/fb/et/uet/drm.html

Hints about DRM reception with the ICF SW1 are also very welcome.

Thanks,
Rolf, HB9CWP

All:

As someone living in Hawaii, I can tell you that most of your estimates on shipping time to the islands is way too short. Shipments to the mainland do fare better, but you really have to take some of the estimates with a grain of salt, especially if you are asking the guy at UPS or at the Postal Office....

As an example, from the mainland, the USPS will tell you that standard parcel post takes 5-7 days, while in reality, a package of any size (like larger than an envelope) will take three to six WEEKS. So far, the average time for a package sent via first class parcel post from mainland to Hawaii has been on the long side of 3 1/2 weeks. Sending similar sized packages from Hawaii to the mainland typically is a little quicker, but my average is a bit over two weeks to the west coast. (I don't use this method any more, so it may be much worse now.)

I prefer USPS Priority Mail to the mainland, it gets to just about anywhere on the mainland within 5 to 7 days, and Express mail is typically guaranteed to make it in two days (though I tend to get postage refunds for about half of the shipments sent Express because they seem to take three or 4 days. Generally, if the Express Mail charge is over $40 or so (not including insurance) they make it in two days, but if it's below that figure, it takes three or four days...).

UPS and FedEx Overnight from Hawaiian Islands (except, perhaps Oahu) is a minimum of two days. Same for Overnight shipments to Hawaii. For some reason, Airborne Express has managed to get something to me on the Big Island of Hawaii overnight from Texas twice in the past three years. I'm not sure how they did it, or what it cost, but it is an additional data point.

Even though there is no ground between Hawaii and the Mainland, we can ship UPS ground from here (though at higher rates than you'd expect). The "ground" packages get space available on their cargo aircraft to a terminal on the Mainland (in California if I remember right), then go ground to their ultimate destination. Thus, you could get really lucky and receive a ground package from HI to your location in as little as 7 to 10 days, but a more normal arrival time would be on the order of two to three weeks.....

Good Luck!
--Rick AH7H

Ends Jun-28-03 07:54:08 PDT (1454.08 GMT)

This Heathkit HX-20 mobile SSB transmitter was apparently a restoration project that was never finished. It's got a decent repaint job, not mint, and the dial stringing is intact. No visible evidence of burned components underneath. All linkages appear to be intact. It's missing a knob, the feet, and some cabinet screws. Final tube tests strong.

Thanks for looking,
Tom

Ebay is safe if you check your seller first. If he has negative
feedback check 'who and why'.I've had no problems with Buyers - "I gets
my money I ships." My only complaint is the number of "tire kickers" who
ask time consuming questions with no intention of bidding. But that
happens in stores too you just have to grin and bear it.

Seeing as how he has no known address or domain name other than posting with
"newsdawg" and comcast of PA, the scam is probably Robert Morein himself.
His claims may be libelous and unfounded which is reason for a lawsuit.
Let's keep and eye out for this header information, which he can't change
even though he is not posting a name or address for return.

If the meter light is flickering, something is failing in the power supply or radio that's loading the supply more than it should. As I recall, that radio could be run on external 12VDC, so the internal AC supply only generates enough power to run the radio. It's likely a switching power supply and if something is getting hot, it could lower its switching rate such that it becomes audible, thus sounding like a squeal.

Unplug everything, open the radio. Find the power supply. Tighten all the hardware you can see, including the mounts for the transistors and heatsinks thereon. The fact that when you inject air into the radio the sound goes away would indicate that you are cooling something off and the power supply is happier about running that way.

This may not be the cause of the problem in your radio,
but be aware that the bridge rectifier module in the
IC-R71A's power supply has been known to fail -- intermittantly
at first, then totally.

I replaced the rectifier in an IC-R71A in which cycling the power
fixed the problem temporarily. It hadn't made noises, though the lights
were dim until power cycled.

It failed permanently a short while later.

That hissing noise almost sounds like an arcing
connection.....you might also want to check the connections
around the power supply section. If I am not mistaken, this radio uses a
linear supply, not a switching type, although a switcher is probably used
for the flourescent display. Also, if one of the diodes in the bridge
rectifier is failing, it could also be arcing. You could look at the
unregulated V+, at the input of the voltage regulator, with an oscilloscope.
The waveform should have an 8 millisecond period, indicating full-wave
rectification. If you see it changing from 8 to 16 milliseconds when the
problem surfaces, one of the diodes in the bridge is intermittently opening
up, causing half-wave rectification.

Pete

Actually, that _is_ the way to get his money back, but PayPal would prefer their customers not go directly to the credit card company because if the credit card company agrees with the claim then PayPal is out the bucks since technically PayPal is the selling merchant, at least as far as the credit card transaction is concerned. Instead, PayPal would rather you give up your rights as a consumer and let them 'arbitrate' the dispute... meanwhile 30 days elapses and you lose your right to dispute the charge with the credit card company. They have no legal right to force you to do this but I'm told that if you do they may threaten to drop you as a customer.

Hello and thanks for looking - I have a Kenwood DSP-100 Digital Signal Processing unit for sale. Was used with my TS-450S which I sold awhile ago, thus I can't verify its current operation and must be sold "as is". But it was working fine last time I used it. This unit can also be used for the TS-850S. From a caring and non-smoking environment. Comes with original manuals (sorry, I don't have the original box or original accessories).

Asking $650 or best offer, plus shipping.

Regards,

Craig

This the original Motorola Red Book published by Sherman Wolf in 11" x 17" format. While not exactly a rare book, it has become quite difficult to find in the past few years.

It's a great 136 page compendium of schematics, crystal information and alignment information covering Motorola commercial two way radio equipment from the old 30D to the early Motracs. Much of the information can no longer be found from any other source. This one is in great shape.

$20 plus shipping

<< I touch the mic cord the squelch clears up
and I can hear much better. Is this a grounding problem and if so, what is the best way to ground it? Sometimes when the mike gets closer to the radio it clears up too. >>

G. D.-

I'm guessing that your antenna is nearby, maybe sticking out of the rear of the radio, and that there is something else nearby that is generating some kind of interference.

You didn't get one of those Radio Shack 25 Amp switching power supplies, did you? They are great power supplies and a real bargain at $59. However, they generate switching noise that can be picked up by the radio it is powering, if the antenna is nearby.

If I'm wrong, and you're using an outdoor antenna, then perhaps there is a bad shield connection to the coax cable where it attaches to the radio.

73, Fred, K4DII

PS: Listen for the Titusville, Florida "Mosquito Net" at 28.333 MHz on Wednesdays at 7:00 PM Eastern Time. If the band is good, you may also have an opportunity to pick up any Ten-Ten numbers you need.

923. Icom IC 820 " D"

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-01 14:00:39 UTC
From: VK6XH <vk6xh@arach.net.au>
Message-ID: <3f019409@funnel.arach.net.au>

Are you looking to dispose of a solid-state receiver that will tune
around 500 kHz CW and FSK (AFSK output) ? An old receiver that is
"sour" on HF but is OK on MF will do just fine.

Hi Ron the question has been asked before, using Google search "GROUPS" not
web, here is what popped up:

What's the deal with the Kenwood TS830S gold & silver labels ???? I
am the original owner of serial #2041063--It was a very early unit--I
purchased in Nov 81. It has a gold label, and the words HF TRANSCEIVER
on the right lower corner. I've seen ones that say HF SSB TRANSCEIVER,
and silver labels. Which ones are worth more ?????

Nothing at all. It is the color of the labels alone as far as I can
tell. The gold labels seem to have been a later run.

>am the original owner of serial #2041063--It was a very early unit--I

Well, you might find someone willing to pay more for a cool label,
certainly you can make an argument if yours is a good one. Heck,
I may want to paint some labels gold and sell them now.

Mainly just a mod in the power supply. This is the same mod you see in all the 830 mod updates. Other than that , there is no real difference. The gold label is after serial # 200000 I believe which means any 830 built in 82 or after is a gold label. I have a 82 TS830 which is a gold label. Any 830 is good, as you can modify any silver 830 to be the same as a gold. Also I recommend the Rick Measures mods for the 830. The VBT alignment is real good the way he recommends it. I've done every mod I can think of on mine. It's a good old radio. I still use it, because it can keep up with most of the new stuff. And I can work on it. MK

How high a freq do you want to go? There are a few "all band- all mode
radios.
The TS-2000 is one. Also the IC-706mk2g, FT-100/d, FT-847, etc...
I use a IC-706mk2g as an all band radio. It receives and works all you
mentioned. It's a very small mobile rig with a detachable faceplate. I
use it both at home and in the car. For a strictly home unit, I'd
probably go with the TS-2000.
The TS-2000 will work 1.2 ghz, and I believe can work full duplex for
the birds.
So can the ft-847...Neither the ft-100 or ic-706 work full duplex, but
will work split. The 706mk2g only goes up to the 70 cm ham band "440
mhz", and receives to 470 mhz. I use it for 460 mhz police. I also
listen to a lot of aircraft, and also copy ACARS with it. One
thing....You'll pay a good bit more for a TS-2000 than a ic-706 or
ft-100. But it's a bigger radio, with more bells and whistles. But any
of them will do what you want to do unless you want to go way high in
freq. Of the ones I mentioned, I think only the TS-2000 covers 1.2
ghz. And I believe that band needs an optional part. I've been pretty
happy just with the little IC-706g. It's pretty decent, and you can
get those new for a little over $700. The TS-2000 will be $1300 plus,
I think, depending if you get the faceplate or not. I wouldn't mind
trying a TS-2000 for a "base" radio. Having all bands, all modes will
spoil you. You can zip-zap-zip anywhere at the flick of a knob. Also,
all my puter programs "SSTV, RTTY, PSK, etc, work on any band any
mode. They make for a kick butt scanner too. Better receivers than
most "scanners". MK

950. Save our shortwave from massive interference ☐ stop BPL/PLC

952. 60 mod for Icom 706 MkIIG

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-04 01:29:24 UTC
From: Bill <w2blc@despammed.com>
Message-ID: <UL4Na.4348$ma.4212@twister.nyroc.rr.com>
Source record: 28875

I have found conflicting mods for this rig. One with pix is at:
http://www.amghummer.com/Accessories/icom_install/MARSmod.htm

Anyone tell me if this will work? This surface mount stuff allows no room for error or easy repair if the mod doesn't work.

Tnx, Bill

I haven't opened up mine yet, but as I remember, the method I saw
seemed to match the instructions on that web site. So as far as I
know, I think it's correct. But I'd get 2nd opinions just to be on the
safe side. BTW, I've heard the easy way to do that is just crush the
resister with needle nose pliers rather than desoldering. But you
might wanna get 2nd opinions on that too...:/ MK

957. Amateur Radio now officially DEAD at Radio Shack

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-04 12:28:24 UTC
From: bball@green.home.org
Message-ID: <slrnbgau25.imv.bball@green.home.org>
Source record: 28880

- it looks like amateur radio is now officially dead at Radio Shack

- the company no longer lists any transceivers, and appears to have dropped its only HT from the on-line catalog

- there are still some accessories for sale, but all seem to be third-party

- it looks like the sell-off (which began several years ago) is now complete: no HTs, no mobile VHF/HF units, and no more amateur radios

- but you can get your NASCAR scanner, belt accessories and headphones! (and a cellphone and satellite TV service)

whoo hoo!

:P

958. Sony ICF-SW77 help

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-04 13:42:00 UTC
From: John & Karen Blevins <jpblevins@alltel.net>
Message-ID: <lufNa.1348$J%2.528997@news.alltel.net>
Source record: 28882

I have a Sony ICF-SW77 (over 10 years old) with an audio problem. Lots of static (pops and hissing), like from a loose connection, not on the air static.

I saw an article describing failed ribbon cables inside the radio. The article mentioned that this was a manufacturing defect and mentioned a repair kit.

I'm trying to make sure that I'll be doing the right thing to repair this very expensive radio.

Aby help or suggestions will be appreciated.

Thanks,

John

A far cry from the Origional "radio shack" locaited on commonwealth
ave in boston.. the origional store sold good american radio's..
Radio Shack is now nothing more then an outlet store for Overpriced
slingawhore knock off's and JUNK..

Just MY Opinion..

Hmmm.

They should take the word "Radio" out of the name of the stores. The store name should be "Shack." Sounds appropriate to me.

Cheers,

You can read about the history of RadioShack here -
http://www.radioshackcorporation.com/about/history.shtml

Interesting that Charles Tandy bought RadioShack in 1963 for only
$300,000. Turned out to be a pretty good investment!

Actually I don't give a rip if Radio Shack sells ham radios or not. I
would miss the resistors, capacitors, relays and other misc electronic
parts they sell. I hope that stays.

By the way I still have an old original Radio Shack catalog before Tandy
bought them out.

Given the proliferation of mail order ham radio stores and their
competitive pricing, and the fact that few Radio Shack employees can
meet the "you got questions, we got answers" brag in regard to ham
radio, I wouldn't be surprised if RS gave it up.

On the other hand, maybe they're simply cleaning out stock for the
publication of their next catalog...

Radio Shack has parts that I cannot obtain without mail order or driving
quite some miles. I have a RS store only two miles from my home and
that makes it real good when I need a resitor or cap for a project.

I don't think Radio Shack is useless and I'm a serious ham for 43 years.

Greetings
Has anyone taken apart a cell phone or see a block diagram of a typical cell phone who could answer a question for me?
I would like to know how they generate the operating frequency?
Larry

I use Mouser also, but when I only need one or two resistors which I may
not have in my inventory Radio Shack usually comes thru.

Hey, its a good thing.....

Actually, a ham friend, a EE who has been out of work a while,
recently started working at a RS, so that have at least one employee
who knows electronics and ham radio.

> Which of the two device classes has more radio-related software
> written for it?

PalmOS has more.

> What about general software?

PalmOS has a *lot* more programs (thousands) of all kinds than the PPC
platform does. No comparison.

> Does it matter which I pick?

Yes. It depends on what you will be doing and since you have as yet no
experience with these devices, you can't really tell what your eventual
interests will be. They both have their strong points.

> If I use Outlook, Word and Excel on my PC, does that make the Windows
> CE device the clear choice?

No. Any PalmOS device will sync with Outlook, and if you buy a later model,
say Palm 5XX series or later, a program called 'DocsToGo' (comes with the
Tungsten and M5XX series) will provide compatibility with Word, Excel, and
Powerpoint. There are also a lot of other standalone programs that offer
Word and Excel compatibility (Wordsmith and Minicalc, for starters.). I
know it sounds a little wierd, but you can't simply say that PPC devices
interface witrh MS productivity software (Word, Excel, etc.) better than
PalmOS devices in all situations. It depends on what you're doing with
those programs.

> Ken KC2JDY

I'd suggest you visit either www.palmgear.com (and click the 'software' tab)
or www. handango.com for a good listing of available programs. Also,
www.memoware.com has tons of databases that are of help in electrical or
engineering work of various kinds, as well as a lot of reference works.

Being honest, I prefer PalmOS devices (I have a Tungsten T at present) but I
totally agree that both have their place. In your comparisons, be careful.
The PPC devices are rated at much faster processor speeds and have a lot
more memory than PalmOS device. But because one is running the relatively
small and nimble PalmOS and the other is running PPC/Windows CE, there is no
way to compare the two platforms just by processor speed and memory. The MS
operating system, and programs that run under it, require a faster processor
speed and more memory than the PalmOS operating system. Here is a brief
comparison (with which almost everyone will probably instantly disagree!)

PPC
- better multimedia than PalmOS devices.
- generally worse battery life than PalmOS devices.
- integration with Word and Excel is generally better.
- better gaming.
- more advanced wireless operation.
- better screens than PalmOS devices
- better corporate integration.

PalmOS
- much easier to use for most software (fewer taps on the screen to accomplish the same operations).
- immense software base compared to PPC.
- can get Word, Excel, PowerPoint, and Access compatibility easily but it isn't built-in.
- generally smaller, lighter, and less expensive than PPC devices.
- much larger installed base of users so relatively easier to get questions answered.
- PIM functionality much more user intuitive and 'quicker-on-the-draw' than in PPC devices
- programs are cheaper than on PPC devices.

As always, YMMV :>)

Source record: 28805

I have a 930S (with built-in tuner) with the Power Supply Unit (Board # X43-1430-00) that has been separated from the main chassis. I have the maintenance manual, but it doesn't indicate which of the cables plug into the connectors (there are 6 of them) on the board. If you have this information, or if you don't mind looking in your 930 and emailing where all the various cables plug in, this mystery could be solved. The board-mounted connectors are numbered, and the plugs have color-coded wires. A quick chart matching the two would get me going.

The power supply board is mounted vertically just to the right of the power transformer.

Please email replies to my karl3333@hotmail.com mailbox.

Check out this link for Palm OS ham radio s/w:

http://www.palmgear.com/index.cfm?fuseaction=software.answernew&sid=B32F3682-82DE-4F1A-AAB979DB67427C9F&quicksearch2=ham%20radio&CFID=2370647&CFTOKEN=51651317

Palm OS programs normally don't cost more than about $30, with a huge amount of them in the $5-10 range.

Hummm, probably is a diode...I didn't pay that close attention to the
part.
If you crush the part, or desolder, it's gone either way. For some
with sloppy soldering skills, crushing might be the preferred method.
But if you desolder, you still have the part. MK

Message-ID: <be7f80ojk1@slb9.atl.mindspring.net>
Source record: 28814

I finally manged to locate the 88CN and 88SN narrow filters for my 430S (currently have the 88S and 88A in there, this will fill the last two slots) - now I need to find someone - in the Baltimore - Annapolis MD area would be nice - to install them. Does not look that hard, but still I am a little uncomfortable about working inside my 430. Does anyone have an alternative to sending it to Kenwood in Virginia Beach for service. Finding someone in this area would really be nice - much simpler to drive it over as opposed to shipping to Va. Beach and dealing with Kenwood which I hear is not that much fun. Thanks and 73

The story given by emplyees here is that they have dropped all HAM
band equipment and have no plans to get any more. Most of it was
relabeled Japanese gear anyway, so why not go to HRO or one of the
other mail order shops for it. I actually buy most of my equipment at
hamfests. With six per year within an hour's drive, I get quite a good
selection. I hang on to business cards from the displays in case I
need something in between. It helps to keep the better dealers
interested in the 'fests.

check with the W5YI or the ARRL websites or contact a local VE session and pay the fee and the will get it done. The same as if a new or upgrade license.

It's easy. Go the the www.fcc.gov web site. Find the toll-free
telephone number that can be called to request FCC forms. Call the
number, and tell them you want form # 605. One or two days later it
will be in your mailbox, at no charge. Fill in the form, and send it
in. A few weeks later, you'll get your license in the mail, with your
new address.

You can also download the form at the www.fcc.gov web site in PDF
format, print it out, and then fill it out, and mail it in -- but I
found it easier to just have them mail the form to me.

Are you looking for mobile or base? 70cm band? If you're looking for 70cm, I doubt you'll find a reasonably priced 70cm all mode. Most likely you'd have to consider one of the HF+VHF/UHF radios out there like the FT-100D or the IC-706MkIIG.

Source record: 28825

While you're mentioning power problems with TS570, I have a problem that actually shows quite opposite, it shows 60w on the internal meter while giving full power, 100w out.

What actually happened, a while ago (in 1998)there was a mod that enables you to increase power of the 570 all the way up to 200w. I can't remember exactly the way mod worked but it was something like short-circuiting pins 2(?)and 9(?) (just a guess) on the 13 pin acc connector and turning the radio on while holding two other buttons as well. Then you go into menu #18 (again, just a guess) and change the power settings. This is not normal menu you access from the front panel, this is "setup menu" and the radio powers up with "SETUP" instead of "HELLO" on display.

Anyway, I tried the mod and it worked fine at 150w for several years but from the moment one, the radio's in-buillt power meter would show only 60w although it would transmitt 150w, and later 100w after readjustment. I had one of the ATU relays blown (hence the power readjustment to 100w, hi) so I took the radio to an authorised Kenwood repairer who fixed the rig, tested and it was all OK, apart from the powermeter. And he said: "I have no slightest idea what to do about it"

That all happened about 2 years ago, since then I haven't been able to find any info on how to fix this.

So, anyone had similar problem and if so what did you do to fix it ?

Mike

Typically a phase locked loop (PLL) oscillator driven off of a crystal oscillator running as a frequency useful to other housekeeping functions in the phone. All of this is usually done in custome IC hardware by the major manufacturers.

But by the time you see custom ICs, everything is pretty small and there
is much less likelihood of being able to recycle any of it. I paid fifty
cents for a relatively recent handheld cellphone last summer, and I could
barely identify the crystal filter, and it was pretty much a waste of
the money since virtually nothing could be reused.

Older ones are a different matter. The big clunky portables, the mobile
units from the early days. In those, most of the ICs are identifiable,
and even in DIP packages. I've seen common Motorola synthesizer ICs used.

These old phones are a neat source of parts, particularly since nobody
wants to use them anymore (or they outright can't be used anymore), so
the cost is low. Pull out a temperature compensated crystal oscillator, a
nice FM IF strip with a crystal filter in the 45MHz or higher range (plus a
crystal to move it down to 455KHz), prescaler ICs, those synthesizer ICs,
various computer stuff (the old ones have things like 8085s, and their
peripheral ICs), and NE570 compander ICs.

Actually a better idea might be to go to the West Tennessee Amateur Radio Society and scroll down and click on the "Renewing your Amateur Service FCC license" link in the left hand column. It reprints the directions for renewing thru the ARRL if a member, getting the 605 from the FCC and step-by step directions (from the ARRL website) for renewing on line with the FCC.

I do hope Andy finds the a more suitable answer then my misreading of the original message.

I guess being a Rent-A-Cop means a Usenet Cop as well.

My opinion

Hi, rlucch:

I like some homebrew ugly ducklings.

If it isn't auctioned off, and you want to pack and send it to 452XX for $9.99, I'll offer you that for it.

Yeh, yeh. I'm lazy ... not motivated to search my detritus for the stuff to build another one ... and cheep, too, sometimes ;o)

73, Dave, N3HE

This is a service extender for the 564-series scopes, which used the
3-series plug-ins. The time-base was a plug-in on this series.

The extender allows the plug-in to operate outside the scope chassis
for adjustment or troubleshooting.

Hi Frank

The TS120V is an excellent radio it has very good audio quality and a very punchy signal I use one myself I have had some very good contacts on it both on CW and SSB how about CX on 40mtr SSB from the UK on a G5RV antenna with a report of 5/2 and he was 5/9+and using 400w so not bad the receiver is very compatible with the Icom IC746 that's side by side and on the same antenna it is better than my FT101ZD and it is very easy to use if you have chance of one at the right price then grab it I am sure you will enjoy it

I have a Yaesu FT-4700RH with two burned-out pilot lamps in the control head. Can anyone (perhaps someone with a service manual) tell me what the bulb is? Also, can I unsolder them from the back of the board and pull them through, or do I have to remove the board to get to the other side? If so, how do I do that..?

Thanks & 73,

I hate it when that hapens and usually send about the same thing back and never try to resend the information. If people can not post with their own email or a place where a reply will go without hunting around their address for "remove this" junk they don't deserve a response. Doubt it slows down the spam anyway.

Hi,

Does anyone make a box that is a transmitter, modem (TNC), and GPS receiver? I'd like to be able to drop a single box in a car or boat that I want to track. I would attach an antenna and a power-supply and that would be it.

Does it exist?

If not, are there any websites with suggestions on how to set up a simple APRS transmitter? I would think a bunch of people have spent some time on this already.

Thanks!
John

The Kenwood TMD-700A comes closest. You still need a GPS receiver, but
the connection is simple and straightforward and the GPS receiver needed
is not too expensive and quite small.

1033. TR-751 / B3016 Interface

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-07 05:51:14 UTC
From: Jason Dugas <kb5urq@hotmail.com>
Message-ID: <vgi2j0pgri5ve6@corp.supernews.com>
Source record: 28706

Hello all,

I just purchased a new Mirage B3016 amplifier for my TR-751 2m All Mode.
The back of the Kenwood has a 4 terminal connector; in the manual the
connector has the pins listed as:
Ground, ALC Input, and the last two are labeled as "shorted on transmit"...

The Mirage unit has an RCA jack for remote keying; in order to key the
antenna relay the RCA jack must be pulled to ground.

My question is whether the terminals that are "shorted on transmit" are
shorted to each other on transmit or if they are both shorted to ground.
Would test this for myself, but don't have my rig running right now. Was
wandering if anyone knew this already?

Thanks for any replies,

Jason

Hello Karl,

I am currently working on a TS-930S, so it is open on my bench. I can take some pictures of it but don't know (I am not at home now) if they will show you what you need, as I recall that PCB is very close to the power transformer... I will try and will let you know.

Take a look also at my TS930S page at:

http://jvgavila.com/ts930s.htm

There is a picture there of that PCB in-place:

http://jvgavila.com/ts930_ps.jpg

Perhaps it will help a bit!

Best regards,

JOSE

1039. Elecraft K2/100 or Kenwood TS-570D(G)?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-07 16:16:15 UTC
From: Paul Clay <mrvanski@yahoo.com>
Message-ID: <3F099CCE.75BFE53@yahoo.com>
Source record: 28712

I am trying to decide whether to purchase a new Elecraft K2/100 (to be built by me) or a new Kenwood TS-570D(G). I enjoy kit building, but not so much I want to compromise on basic operating enjoyment (which for me, however, doesn't include a need for a lot of "bells and whistles). I plan on using either rig as a base station operating mostly SSB. At this point, the plusses for Elecraft seem to me to be the enjoyment of the building process and the quality of the unit's receiver while the plusses for the Kenwood seem to be inclusion of a .5-30Mhz general coverage receiver (I like to SWL occasionally) and the availability of FM and AM operating modes.

Thanks in advance for any helpful comments or suggestions (another rig to consider at the $1000 price point?).

PalmOS: 13,000+ vs 3,000 for WinCE/PocketPC

>Does it matter which I pick?

Yes.

>If I use Outlook, Word and Excel on my PC, does that make the Windows
>CE device the clear choice?

No, oddly, it makes Palm (and PalmOS compatables, such as Sony or
Handspring) the clear choice.

There is *no* PDA with Excel and Word with all the functionality of your
desktop or laptop versions.

The program with the closest match to what you can do with desktop Word &
Excel, according to independent reviewers, is the $70 DocumentsToGo by
DataViz for the PalmOS. Yes, the PalmOS. Reviewers have found Pocket Word
and Pocket Excel on the Pocket PC platform to be anemic and feature-poor by
comparison..

I've used it for two years alongside competitive software, and prefer it to
competitors..

I haven't seen that radio, but if it has the orange "omniglow"
lighting, the bulbs "12v" are colored with orange shells, and can be
ordered from yeasu. On my 2500m, which has that lighting, you pull the
control head by undoing the hex screws. Then you undo the screws and
pull the board out from the back. The bulbs are soldered directly to
the board. They come out the front with the leads soldered down to the
board. My 2500m has four of them. It's easy once you get in there and
see it. Or should be anyway... MK

I have been looking at the Heathkit hw-101, the atlas 210x, and various alinco mobiles. My main concern is cost. I only have 250-300 to spend on this unit. I am obviously not particular about type. Is it cheaper to get a mobile and use it as a transceiver or just get an old base station and use that? I am really quite interested in the old analog dial types. Any suggestions? CW is a must.

Hi,

One say excellent things about the RX module equipping the K2, maybe one of the best on the place.
But I suspect that if you want a RTX this is also to emit and reach pileups or DX stations. So the TX part is probably as important as the first one.
And a performing DSP is today quasi mandatory.
I cannot decide for you, so check here :
About K2, http://www.eham.net/reviews/detail/117
My page about TS570D, http://www.astrosurf.com/lombry/qsl-ts570.htm (or on eham)

All users of the TS say that the report that they received is often "very clear signal". Up to now, even equipped with a longwire (I own vertical, a beam and soon a G5RV too) I can hear ANY DX station and even JT in QRP (see my SWL QSL gallery ONL5183, very soon upgraded to the licenced version, LX1SKY).
A friend of mine also bought a TS570 and he appreciate much his new rig for the relatively low price it cost.

At last, your best friend should be a HF engineer. He could help you to find the best rig in terms of performances, filtering, DSP capabilities, etc.

Hope this helps

(subj: Need Source for Diode in TS-1285/URM-120 Wattmeter 2-30 MHz Plug-in Sensor)

Hi, all concerned:

The diode looks like a 1N23-type, with cathode (arrow) toward tip.

Has marking ALPHA D4190A.

TIA & 73,

Dave, N3HE

1047. Re: Yaesu FT-4700 pilot lamp replacement questions

Well, my FT-4700H Technical Supplement lists those lamps as:

Parts #PL6001 thru PL6004 with the number Q1000074, the nomenclature "Lamp" and the number T1-9V60R-0R06.

The service manual unfortunately doesn't show how to remove/replace those lamps.

Naturally, I speak only for myself in saying that it would not cause
me undue grief (or any harm) if I were to learn that legions of
noxious parasites had infested your codpiece.

I've been building and modifying electronics (kits and otherwise) for
35 years. It will be a cold day in hell indeed before I take part in
any such lawsuit as you are proposing, class-action or otherwise.

Perhaps an IC-735 which you can get for say 300 to 375 or so if you try hard enough. That way it is solid state and doesn't require tubes or tuning. But a TS-520 would be a good pickup or a Yaesu FT-101ZD or any of the 101 series.

The book on mine only lists a parts assymble. From an artical in QST May 1996 it states 'it looks like a 1N21 or 1N23 but something is differant. If replaced with a 1N21 the lowest third of each scale is unusable.'
The author states that a Wetern Electric GA50649 and dated 2/59 is a usuable replacement.
I think the diodes were selected for each specific meter.

In another artical in September 1996 they are Sierra part numbers SS-13154-1-n where the n is a specific digit that identifies the specific plug-in. Sierra also made a version of the watt meter. They were selected 1N21s but you need a bunch of them to select the correct one that will work in a specific meter.

A company called Struthers also made a version of the meter.

I can not verify any of this info above but just reporting from the articals.

I have the Struthers version and it has a knob on it for SWR. Lucked out at a hamfest and found one still in the origional packing box that had never been opened from the time it was calibrated in 1983. It came with 3 plug ins for 3 to 1000 mhz and dthe manual but the book does not list the diode by its self, just an unreconisonable asymble.

An older Kenwood might be good to look at also. If you do not have an antenna tuner then do not get one with all solid state output. The rigs that have 6146 tubes in the output will be able to tune a small range of antenna mismatches.
The Yeasu units that have 6146 tubes and not the sweep tubes in the finals are good also if you have to get an older rig.
If you have a 12 volt power supply make sure it is good for atleast 20 amps and more like 25 for the solid stare rigs.

I suspect it's a joke. It's specifies a couple of kit manufacturers,
one of which has pretty much disappeared and the other one of the big
names nowadays, and talks of modifying commercial equipment, but says
nothing about those who actually build stuff with solder. Spoofs tend
to have that sort of narrowminded silliness about them. And it's
obvious to me that if anyone was liable, it would be the solder manufacturers
(or even the government for lax standards) and not specific kit manufacturers.

A few puffs of solder when someone is taking a diode out of their rig
is not going to do anyone damage. Kit building does allow for more
contact with solder. But it's the build from scratch people who have
the most contact. I have little bits of solder all over the place, to
keep it handy just in case I need it or because I've had it in a pocket
or whatever.

It could be so many things, but my 2-B has nothing but a hiss, moving the preselector does not help or change anything, hooking up the antenna does nothing and no stations come in at all, just a hiss and the typical light hum and tapping on certain parts of the radio could be heard thru the speaker.
Any suggestions?

Thanks for the read

Gil

It did help. Thanks very much. Really, for me, the biggest attraction (and
it's a big one) of the K2 is the kitbuilding and future
customization/modification elements. From a day-to-day operating standpoint,
the Kenwood probably makes more sense. Too bad I can't afford to buy both
units. :=)

You can go several routes, Radio with built in TNC and external GPS, or radio and TNC with built in GPS, or all three, radio/gps/tnc and lots of cabling. :)

I'm using a Kantronics KPC-3P with built in GPS (Garmin 12) called a Kantronics GPS Tracker. All you need is the transmitter and TNC (it's a tad wider than a regular KPC-3 to house the GPS component) but it works great, and you have control over LTP and BLT commands within the KPC command set using the 8.3 firmware.

However, you probably want to look up the context. It is
something to the effect of, if you want to take over the
government, you have to kill all the lawyers, because they *are*
the government.

Either you are the most ambitious radio owner I have ever heard of, or a Honda Odyssey is not what it was when I was younger. A Honda Odyssey was an incredible sort of hybrid four-wheel ATV/dune buggy, later replaced by the Pilot. My neighbor had an '85 FL350 Odyssey when I lived on Cape Cod, and as far as I remember the noise alone would prevent one from mounting a radio and being able to use same.

I have for sale a nice Yaesu SP-5 Speaker with the built in Timewave DSP-59Y digital noise reduction unit. Included is the notebook manual for the DSP-59Y, the original box for the SP-5, and the 12 volt Power Cube for the DSP. This unit looks and works great. There are two digits out on the DSP display. When you dial up 2400kHzs for example it show 24. Other than that it is perfect. Price is $350 shipped in lower 48. Thanks, Charlie Hugg, K5MBX

It is simply a 1N21 which has been selected so that the meter will read
full scale on the lowest range of the plug-in. I have found a suitable
replacement for one of my plug-ins by trying a number of diodes until a
full scale reading could be achieved. This will require recalibration
of the plug-in, which is not a trivial task, unless the wattmeter reads
correctly for a known power source.

Do not forget to wrap the diode with tape, per the instruction manual.

There is no rig of which you ever will be as proud of as the Elecraft K2.
Because you built it yourself! And its performance is top class, and its
handling as easy as it can get. Elecraft is ham radio back to its roots.

I hope you're right.

I fear, though, that it might be the sort of bottom-feeding "look for any excuse, file a class-action suit against a bunch of deep-pocket companies, and aim for an out-of-court settlement" sort of thing. The deep-pocket companies (Kenwood, Icom, and Yaesu look like the targets) buy off the suit for a few million dollars (because the costs of defending the suit, even successfully, would run to rather more than that). The people suckered into agreeing to act as members of the class end up filing claims and getting $0.50 each, and the lawyers take at least a third of the total as fees.

> Spoofs tend
>to have that sort of narrowminded silliness about them. And it's
>obvious to me that if anyone was liable, it would be the solder manufacturers
>(or even the government for lax standards) and not specific kit manufacturers.

Alas, here in the United States, anybody can sue anyone over anything, and force the defendants to shell out big bucks in legal fees. Even if the defendants win, they may not be able to recover their legal costs from the plaintiff.

It's distressingly common for lawyers to file "shotgun" liability suits, including as defendants any party who had _any_ involvement in the matter. In many states, if the plaintiff wins a judgement, and most of the defendants have no money (e.g. the companies which are bankrupt or nearly so), then any defendant _with_ money can be held liable for the full judgement even if the court had found them only 1% responsible for whatever damages occurred.

This is one reason why many companies "buy off" such lawsuits with an out-of-court settlement which doesn't admit any liability. The possible financial risk of losing the suit is often far too great.

>A few puffs of solder when someone is taking a diode out of their rig

Also tubes, caps, etc.. Sounds like the front end is dead. Maybe a
12BZ6???, or something like that...Also , I think a 12AU6 in the next
circuit.I forgot what they are using...I have a 2c, but not a
2b..Also, make sure the xtal is actually oscillating. A dead xtal
would cause that. Make sure the xtal switch is in "normal" position,
and not set to "aux" unless you have an xtal in the aux socket. Clean
all switches with tuner cleaner. Bandswitches, everything. MK

Thank you for all the responses. You guys are most helpful. Here is my next step. There is the BRATS hamfest in Maryland that I will be going to at the end of the month. It will be my first fest. I'm rolling out of here at 2:00am to get there when tailgate sales begin. Are the products pretty good from hamfests in general. The radios I have my eyes on are the ts-520, ft-101, ten tec 555(not sure but if the price is right why not), and still the atlas 210x. What do i need to look for to keep from getting suckered. Hams are a pretty honest bunch from what I have learned, but I still do not want to be taken for a ride. I do have some electrical experience(avionics in the Navy).

Thanks

What, specifically, happens when you try to use the website?

Do you have the passsword for the FRN?

Which web browser are you using?

Mozilla and Netscape 7.1 are problematic because the FCC web designers
write specifically for Internet Explorer, not standards-compliant browsers.

I can't speek for the hamfest that you are going to but from going to them
for the last 30 years in a 200 mile radius from the house here are some of
my observations. Do not be afraid to bargain with the sellers. Offer them
less than what they are asking. You may want to go to e-bay and see what
the rigs are selling for there. I have noticed in the last 5 years or so
there seem to be what I call simi-professional dealers. They get to the
fests eairly and buy up anything they think they can sell of e-bay or later
in the day for a profit. I hate this about the ham comunity. Think they
should be hung.... I don't think this is good ham spirit.. Enough of that
soap[box... Make sure you get the sellers name, call and address on the
items and make sure he will take it back if it is not as he says it is.
Friend of mine stopped me at a fest and was showing me a radio with tubes
missing and was told it was working just fine !! If the screws look like
they are worn out I would stay away from the rig. Going into an old rig
once or twice is ok, but there are too many 'golden screwdrivers' around
that mess up the rigs. Be sure to get a manual or know where to download
one on the internet for the stuff you buy.Here is a place to look for some.

http://hamradio.online.ru/sch_eng.html

Also make sure you get the mic or key for the transmitter.

Save some money for antennas and any other stuff you may need to get the station going.

The so called no-lead solder (in my opinion) is worthless. I can't get it solder to clean pc boards, component lead to lead or even leads to chassis. Guess I need to put away the Weller SP-60 (let alone the 30 watt for pc boards) and use "Big Bertha" (100 Watt American Beauty), too large a tip for pc boards.

Just my observations.

Gil:

You don't say what band (or if all bands) are dead. If you have a hiss, the audio circuits and at least the last IF stage is working OK. The oscillator for each band is a section of the 6U8. Replace it, do not rely on a tube checker, and see it that resolves the problem.

Checking the 1st oscillator is relatively easy. You will notice a test point just behind the 6U8. Using a VTVM or high impedence MM, check to see if the voltage to ground (in microvolts, most likely) is negative or positive. If it is negative, the crystal oscillator for the switched band working. You will notice the change in polarity when you switch to a band with no crystal in it.

This is just the starting point for the troubleshooting you might need to do. I recommend you download a copy of the 2b manual from the Bama site and follow the additional suggetions found there.

Good luck. The work is worth the effort. The 2b is a great receiver, even by today's standards.

Cheers,

Al Link K4ICL

1087. FS: Drake Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-08 23:11:17 UTC
From: Al Lorona <al_lorona@agilent.com>
Message-ID: <3F0B4F95.2A9F900C@agilent.com>
Source record: 28760

Drake R-4A and T-4X, AC-4, MS-4. The receiver has some of the VE3EFJ mods, the transmitter is unmodified. A list of the mods follows:

1. New power supply filter capacitors mounted underneath chassis, original filter cans left in place on top.

2. Regulated +10V power supply replaces tube regulator. All original components left in place. (Receiver runs much cooler as a result of this modification.)

3. Audio power amplifier has been replaced by a solid state (TDA 2611) PA module. Again, the original tube and components are still there.

The VE3EFJ mods are well-documented. I have a copy of them that I can include with the manuals.

The receiver has a full complement of JAN crystals (purchased in 1997) for the following bands:

1.5 - 2.0 MHz
4.5 - 5.0 MHz
9.5 - 10.0 MHz
14.5 - 15.0 MHz
18.0 - 18.5 MHz
24.5 - 25.0 MHz
28.0 - 28.5 MHz
29.0 - 29.5 MHz

I have photographs that I can e-mail to you showing the mods, cabinet condition, etc.

All interconnect cables included.

Both manuals, original, in very good condition. (Photo available on request.)

In addition, I purchased a number of new Drake parts during the Drake liquidation sale a few years ago, which are included in the deal. These mainly consist of IF cans, switches, a 5945 kHz crystal, spare PC boards, etc.

I also have four spare 6JB6 tubes in original boxes that are part of the package.

To sweeten the deal, I will include a (fair condition) Shure 444 microphone with the difficult-to-find right-angle Drake-sized mic connector.

I am in the Los Angeles area and would really prefer to sell to somebody local. I am willing to deliver within a 100-mile radius.

Price: $300.00.

Thank you for reading. Please feel free to reach me by e-mail, or by telephone at 626 390 3257.

Regards,

Al W6LX

Heathkit HW-8, circa 1977. I am the original owner. The transceiver has three important modifications:

1. Addition of Forward/Reflected power meter, with a toggle switch on the back panel to select either FWD or REF during transmit.

2. Addition of RIT. There are an additional two mini toggle switches installed on the back panel, one to turn RIT on and off, and the other to switch receive to the opposite sideband for QRM reduction. The selectivity switch is replaced by a high-quality potentiometer for RIT tuning. (The HW-8 Selectivity is wired permanently in the 'NARROW' position.)

3. The weak Heath audio amp has been replaced with an LM386 type to drive an external speaker.

These are the Ade Weiss W0RSP mods from CQ magazine in the 1970s.

Original manual and schematics.

Original power cord.

I am more than happy to e-mail digital photos of the unit to you on request. (Sorry, I don't have a web site where I can post them.)

Price: $75.00.

Thanks for reading, and please feel free to reach me via e-mail at al_lorona@agilent.com, or via telephone at 626 390 3257.

Regards,

Al W6LX

>write specifically for Internet Explorer, not standards-compliant browsers.

The FCC fixed that problem about a year ago.

Netscape 4.75 has worked 100% for me......and NOT using any
BillyBloatWare operating system (my OS is eComStation, an
OEM-enhanced version of IBM's OS/2 Warp professional desktop OS).

The key, though, is the CORES ID and password that the FCC sends by
snail-mail when one registers in the ULS.

To do an address-only change you want to do an Administrative
Update (AU), NOT a Modification. Doing a MOD will screw up the
process royally.

Have fun..... <ggg>

1090. FS: Ten-Tec Scout 555 & accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-09 01:26:40 UTC
From: Al Lorona <al_lorona@agilent.com>
Message-ID: <3F0B6F50.88D209AF@agilent.com>
Source record: 28764

This is the 50W Scout. The following band modules are included:

160 m
80
40
30
20
17
15
10

In other words, everything but the 12 m module. In addition, I have an extra (new) 30 m band module that I had purchased from Ten Tec a couple of years ago with the intention of converting it to a 60 m module, but I never got around to it, and will throw it into the package. Maybe you can get it working on 60m?

Noise blanker option included.

Mobile mount included. I have a brand new (non-Ten-Tec) microphone that I will include.

This radio has had the high/low power switch modification performed. A mini toggle switch on the rear panel switches between 5 W and 50 W. This mod is fully documented.

Factory mobile power cord (cigarette lighter plug attached). In addition, I have a few of the correct AMP Mate-n-Lok connectors with which you can make additional power cords for battery or power supply operation.

Original manual.

I have digital photos that I would be more than happy to send to you on e-mail. (Sorry, I don't have a web site where I can post them.)

The radio shows some signs of wear: some of the front panel labels are worn off, nicks and scratches, etc. I don't know how to rate radios, but this is nowhere near collector quality, and I have downgraded the price accordingly. However, the operation is flawless. I just used it on Field Day from the mobile and it performed beautifully. It is putting out full power and the PTO tunes exceptionally smoothly. For a solid radio you can put in the mobile or take on trips, this Scout would let you do that without worrying about scratching it up.

Also included in the package is a like-new Astron SS-12 power supply & Scout power cord. This is perfect for powering the Scout at full power,

especially while traveling.

Price: $300. At this price, I pay shipping.

Thank you for reading, and please feel free to contact me via e-mail:
al_lorona@agilent.com, or via telephone at 626 390 3257.

Regards,

Al W6LX

SNIP

Phil,

When I registered my wife and myself in CORES, I got to pick my own password. The system supplied the FRN to me online. Unless it has changed since early last year.

I agree that if it is administration change not to do a Modification. I accidentally did one and I received a "update" copy of my license 5 to 10 days (as I remember it). What fun.

Even if you are not an ARRL member and/or disagree with its policy, you should seriously consider contributing to this fund. If the BPL technology ever gets implemented, this may very well be the end of ham radio as we know it. Make no mistake about it - we're talking 60 dB noise increase across the entire HF, not dropping the Morse requirement! And for what? So that people in the rural areas of USA can have a faster download from porn sites?

https://www.arrl.org/forms/development/donations/bpl/

A measly $25 - $100 can help prevent your $5000 equipment from becoming an expensive coffee cup warmer.

Since the RSGB has already destroyed ham radio in the UK - it's little more
than multi-band CB now - we feel there is little to be lost that hasn't
already
been sabotaged by our supposedly "National Radio Society".

So, roll-on BPL in this country - the sooner the better. The king is
dead...etc.

I hope you get mega-flamed for that last sentence. What a disgraceful
comment ! And what an appalling slur on the folks who live in rural
USA..... !!

Most of the FCC senior officials are lawyers who don't have a clue
about the technical side of radio. They wouldn't know a door knob
from a transistor. Come to think of it, a know lot of hams that
don't either.

Ten tec still provides service & parts for its older rigs. I'd beware
of "orphaned" radios like the Atlas, unless you can get a service
manual and know what you're doing.

A service technician recently told me the manufactuers are only
required to make parts available for seven years after a radio is
sold. So the newer the better -- or, at least, the easier to repair,
the better.

The FCC site isn't quite as clear as it should be, though they're much faster than I expected. I passed my General a week and a half ago and the FCC site showed my new call sign three days later.

However, when I wanted to login to request a vanity call (my old Tech call from twenty years ago), two problems ensued. One was the lack of a CORES password, which had not been sent to me. I couldn't reregister because the site showed my FRN number as being legit, but I had no associated password. Tech support was very nice and phoned me back with a password to use.

Then, while trying to load Form 605 for the modification, I kept running into a stall during loading. Another call to Tech Support resulted in the info that either Netscape 4.75 or earlier, OR IE 5.5 or later, would be needed (I had 5.0 so I had to upgrade).

Even that didn't do it, and during another call to tech support I was asked to download and install a particular Java applet that the system required. Perhaps at some point the FCC folks could include these requirements on the initial login page so that we know what we need before using the system; or maybe they're lonely and just like getting phone calls.

Now that those dilemmas are vanquished, all I have to do is decide what tranceiver I want, and how I'll afford it....

It is a proven fact.

Many people shot by firearms are injured or killed by lead being
introduced into their bodies. This is practically the same thing.

But soldering irons don't kill people...

60db is a very high figure. Where does this figure come from.
If this is correct wouldn't the VOA,BBC and others nations
broadcasts be shut out from America? Something is odd here,
I can't believe that the FCC would intentionally jam all HF
frequencies from citizen useage.
If the 60db figure is an exageration to get funds then the
augument is lost before it starts !
Even if it is correct Ham Radio could not do anything about
it because its members have shown little interest in
perpetuating the hobby with actual deeds.

Visit www.arrl.org, take a look at their hot-news article on BPL near the top of the page, follow the link to the full story, and then look for the link which lets you download the ARRL's 121-page response to the FCC inquiry directly from the FCC's web site.

The ARRL response contains a bunch of the studies that the ARRL did. Some of them are based on standard sorts of theoretical calculations (e.g. NEC2 modelling of power lines as antennas, combined with data on the probable spectral density of BPL signals, with power levels assumed to be at or near the FCC's current Part 15 emissions limits).

If I recall correctly, the response also cites a number of studies of BPL systems which have been performed overseas. These studies showed that serious problems do exist.

>frequencies from citizen useage.

When money is involved, government bodies have been known to do some very strange things.

It has also become apparent that some very senior FCC officials are woefully ignorant about radio. Political appointees, I suppose.

>If the 60db figure is an exageration to get funds then the
>augument is lost before it starts !

So, go read the studies and decide for yourself. The ARRL has had citations for the overseas studies, and preliminary versions of their own sets of calculations, on-line on their Web site for many weeks.

The ARRL pages point out that previous studies in Japan had led the Japanese government to a similar set of conclusions about the interference potential, and that the Japanese government has concluded that BPL technologies of the sort being discussed _cannot_ be put into

production in Japan because of this unacceptable interference potential.

>Even if it is correct Ham Radio could not do anything about
>it because its members have shown little interest in
>perpetuating the hobby with actual deeds.

Feh. Looks to me as if well over 1000 individual Ham operators took the time to write down their responses to the FCC's NOI and post them on the FCC web site (this isn't counting the numerous duplicate uploads, which I suspect occurred because the FCC's upload server appears to be running on a Commodore 64-grade system and had a nasty tendency to hang during the upload/confirm process).

I spent 3-4 hours crafting my own comments on Saturday, and uploaded them successfully on Monday morning.

Uhhh, this one is even better than Christian Science. What about all the government, military, ship to shore, and navigational use of the HF spectrum? Do you think that the FCC is actually going to allow malicious interference to disrupt these services?

Whether the ARRL is involved or not, and if the statement concerning noise is true, it will never happen.

Save your BPL money and take your girl friend out for a Prime Rib dinner and a night on the town......You'll get a hell of a lot more bang for your buck.

Its the new ARRL policy. In the past they tried to get you to give them your money based on shear blind loyalty. Now'a'days they want to scare you into giving them the bucks. Its the old "If you cant coax them, scare the crap out of them" fundraising policy. The Catholic Church has used this for years and years.

Just think, when this Echo-link nonsense takes over (ala the ARRL's and their "Hinternet"), we'll all have $2000 CB radios.....I know I cant wait!

Maybe, but IIRC the FCC, along with the FAA, FEMA etc. etc. operate extensive HF communications systems. It seems unlikely that a source of such serious potential interference to their own communications would be authorized?

1 is positive (already filed comment)

One babbled about a "slur on the folks who live in rural USA",
forgetting that the vast majority of Internet traffic is comprised of
illegal mp3 downloads, Internet phone traffic, mass spam e-mail and porn
browsing, i.e. pure garbage traffic. Did I insult anyone? I really don't
give a flying fuck. I want my ham radio.

More than one wondered about the reliability of the 60 dB figure,
stating that, if it is correct, other commercial users would be
affected. Here's why they won't be:

To begin with, unlike amateur radio, none of the other radio services
are weak signal users. Whereas in ham radio, DX-ing is more than a rule
than an exception, commercial services aim for reliable, strong signal
communication. Therefore, while even as little as a 20 dB noise increase
(low enough for you, Art?) effectively prevents SW ham radio usage,
commercial users will barely notice it.

An overwhelming majority of SW ham radio stations are located in urban
areas with a high density of low and medium voltage power grids.
Military installations, otoh, are typically found in isolated
rural/suburban surroundings where they have a full control over (not)
allowing BPL into the bases. Btw, high voltage cross-country power lines
will not carry BPL, remember? There is fiber optic already in place for
that.

BPL is going to be delivered all the way to your power outlet, as well
as to your next-door neighbor's power outlet, and to every single power
outlet of every single resident in your city or town. Think you have a
hard time from your neighbor's electric toothbrush pwr supply? You ain't
seen nothing yet.

FAA does not use SW, afaik, so they couldn't care less. Ship to shore? What ship to what shore? They use satellites. Navigational? Nobody navigates downtown Los Angeles or in Manhattan. Any SW navigation is done thousands of miles away from the power lines. Who's left? Some governmental agencies that will solve a problem by increasing their budgets to allow for stronger transmitters and longer antennas?

The only way I see this being resolved is if there's enough RFI obliterating all of Rush Limbaugh's AM channels. Only then will FCC listen, because they'll have to.

That doesn't mean we have to go down without a fight. In order to fight, ARRL, the *only* American ham radio organization, needs money. However, if you'd rather cut off your nose to spite the face and pretend a turd is not in the punch bowl, it's your funeral...

I don't think we need a conclusionary synopsis Zoran, I believe just about everyone here knows full well how to read.

Did you ever stop and consider that because the responses to your original post were such, that perhaps the whole BPL matter is the usual ARRL exacerbated hyperbole?.....In the old'en days they called it "Much ado about nothing".

Never heard of a 520SG. Perhaps you mean 570SG? Both are great radios.
I've owned 2 FT900's. Can't beat them for HF mobile, and they make a great
base rig. Tuner is fast and quiet and they have exceptional receive. No
DSP though, that's were the 570 might be a better choice. If you meant a
520, the guy is asking too much for it. Take the FT900.

- So is the kindom of Saudi Arabia -

Hi David,
You would be surprised just how much hamradio gear is used outside hamradio. Here are a couple of secret (real-life spying) uses that no-one knows about. In Saudi Arabia, the royal families used to use the 145-146MHz band for private communications, and they used only simplex FM. The first equipments they used were Trio (Kenwood) 2200GX handbag portables. I know because there were 2 of them unused in my workshop when I left there in 1993.

To get a hamradio licence in the kingdom you have to pass a 2-part test:
1 - Open your wallet - Riyals > brain cells.
2 - Call the king "daddy".

Radio hams over there did not use the 2M band, that was totally secret, even though there is still a repeater on R6 in Bahrain (or is it Abu Dahbi?). The 2200GX is a bit big and clumsy and not encrypted, so they have now exchanged the gear for Ericsson NMT, then GSM telephones. They had bought a few encryption modules, but they werebased upon sideband inversion and I showed that an SSB receiver could resolve a NBFM signal enought to understand the speech.

One prince in Riyadh (there are over 2000 of them inthe kingdom) had a "royal fleet" of luxury vans that can communicate anywhere within the kingdom (supposedly). They could not get more than 1 mile when I was called in from my workshop. The vans also used the FT101ZD with the FM board fitted (not the AM board). They had been given the frequencies by a Egyptian "radio engineer", the same engineer who had screwed a vehicle panel-mounting screw through the coaxial feeder cable whilst fitting the radios in the prince's vans. They were also trying to use NBFM on 1.8MHz using a 1.5-metre vertical whip antenna on the back. I showed them how to use SSB and set them up on 27MHz by changing one of the 10M band crystals.

I was shown out of the princes pallace and not-so politely asked never to return, for two reasons:

1 - I described a roof-mounted 1/2-wave antenna using household power cable, for communication to the vans (alternative to a ground-level receiver helical antenna). The Egyptian engineer convinced the prince that my knowledge was sadly lacking: I had used INSULATED WIRE for the antenna, and

any fool knows "you MUST use bare wire to make contact with the air."

2 - The prince had bought a suitcase spy recorder. It was an NMT decoder computer / radio / cassette recorder that could be used to "target" a specific mobile. It would follow and record all calls to/from that specific mobile. It would even follow when the mobile was handed over to another node, then continue recording. The prince wanted me to take this spy equipment back to the UK (as hand baggage, through customs inspections) and exchange at the supplier it for another one that worked on the Saudi 450MHz system instead of the 900MHz it was equipped for. I refused.

Incidentally, the prince was also using hamradio gear (30MHz - 1.1GHz general coverage receiver) to monitor general 450MHz analogue telephone traffic, as well as monitor his own security forces. So, if it were not for hamradio gear then a lot of the security / eavesdropping equipment available would not be possible.

All this is 100% true, but I doubt if it will be believed. I wouldn't, and I was the one there.

Oh yes, I beleive you. Ive been to Bahrain and seen wogs like this first hand...an outrageous abuse of privilege and frankly, I'm amazed they still get away with it. I'll be the first to chuckle when the oils runs dry and they go back to their goats and camels. See how fast the white prostitutes and beermeisters leave the fleabags then eh?!?

> authorized?
>

These systems, as well as military HF systems, usually operate in relatively
strong signal
environments. A lot of ham HF operation (especially DX chasers like myself)
try to work with
very low signal levels. Hams are possibly the only HF users in this
category. It seems likely that
the proposed BPL operation could substantially hamper weak-signal operation
while not really
impacting strong-signal operation.

I think the threat is quite real --- an yes, I did file a comment (although
it was a rather small one).
And yes, I am sending a contribution to the ARRL---it seems they are
fighting as best they can.

The old Heath microphone I use(d) with my HW101 has finally died and I need to get a replacement. Rather than trying to find another old microphone for a replacement (e.g. off EBAY), I'd like to purchase a new, current (reasonably priced) model microphone. Would appreciate any helpful suggestions in this regard.

Beyond the microphone being high impedance (60K-100K?), and push to talk, I'm not sure what I need to be looking for (or avoiding) when looking through a current catalog of available microphones.

Thanks,
Paul

Hello all. I just recently purchased an RT-11 autotuner. When I hooked up my Diamond SX-600 SWR/Power meter in-line, it won't show the proper SWR for HF/6m on sensor 1. It doesn't matter if I hook it up before or after the tuner. When I hooked up another SWR meter in-line with the SX-600 and without the SX-600, the other meter seemed to show the proper SWR in both cases. Any idea what I might be doing wrong with the SX-600? Does anyone know something about the SX-600 that I don't?

It is always worth trying Motorola UK.

http://www.motorola.com/uk/

They may well send you a couple of samples for free but at worst will give a
you a list of distributors. A few phone calls will usually turn up one that
will take a cheque order or even give you samples.

(Works with other makers, Maxim are very good for samples, as are National.)

With the gear hooked to the supply, even with it turned-off, when I turn on the supply, the voltage transient cleans or erases the programming in the radios. It's not the radio, as it does it with 2-3 different ones.

Does anyone have any idea how to solve this problem, or if a faulty component might be causing it?

I've worked on more than few of these supplies, and have never seen this problem before.

I've E-mailed Astron, and did not even reply.

I am not trying to be derogatory just trying to be reaslistic
but my logic may be incorrect!!!
60db I suppose could equate to an S9 signal. Is this in error?
Are we saying to the FCC that in all cases the noise will be at
a S9 level? Say the proponents Prove that the noise level will
never exceed S1 and state that the ARRL is over reacting !
If they also state that this benefits the majority of internet
users (or total population)in that it can reduce costs by half,
then ham radio would be in a very sad position.
Now I have heard it stated that from 14 thru 30 Mhz the actual
noise level is far below the normal radios thresh hold, so what
will be the TRUE noise level that we would have to compete with?
If it was declared specifically what 'S' noise level increase that
we would have to contend with on EACH band rather than the inuendo
of S9 level, we would be better positioned to determine whether we
were complaining for complaining sake and frittering away any
possible influence we do have for the future.
If we are to use our number strength wisely for the benefit of
the hobby then it would behoove the ARRL to be very specific
with respect to the possible danger so that the label of
obstructionists will not be aplied at a future date.

>60db I suppose could equate to an S9 signal. Is this in error?

No, I don't think so.

>Are we saying to the FCC that in all cases the noise will be at
>a S9 level?

They're saying that an Access BPL system, based on the technologies which have been proposed (and tested in other countries), would induce enough energy on nearby amateur-radio antennas (e.g. a dipole located within 30 metres of the power line), to raise the broadband noise level at HF frequencies on the rough order of 60 dB above the ambient noise levels which are now generally present in urban areas.

> Say the proponents Prove that the noise level will
>never exceed S1 and state that the ARRL is over reacting !

As far as I've been able to tell from reading the various materials, the BPL proponents here in the U.S. haven't made this sort of claim, nor have they performed any significant number of actual field trials to measure interference and noise levels.

They seem to be evading or ignoring the issue.

>If they also state that this benefits the majority of internet
> users (or total population)in that it can reduce costs by half,
>then ham radio would be in a very sad position.

I don't think they've made that level of claim either.

> Now I have heard it stated that from 14 thru 30 Mhz the actual
> noise level is far below the normal radios thresh hold, so what
> will be the TRUE noise level that we would have to compete with?

You have, I think, heard incorrectly.

What I have heard and read in the past... and what I've read in the noise specs posted in the ARRL's response to the FCC NOI - is that on the HF bands, the noise floor is dominated by atmospheric (QRN) and man-made (QRM) noise, *not* by the noise floor of the receiver's own electronics. The ambient noise level most of us face today is many dB up *above* the radio's threshold, not "far below".

It isn't until you get up into the VHF bands that the receiver's
self-noise becomes equal to, or greater than the ambient noise level.

That's the problem with BPL. It's not just that the noise levels it
generates would be quite a lot above the noise floors of our
receivers' electronics - they'd be well above the typical ambient
"band noise" levels present today on most of the HF bands.

In other words, BPL *will* bury a lot of the weak signals we can
receive today, and will bury 'em deep.

>If it was declared specifically what 'S' noise level increase that
>we would have to contend with on EACH band rather than the inuendo
>of S9 level, we would be better positioned to determine whether we
>were complaining for complaining sake and frittering away any
> possible influence we do have for the future.

So GO READ THE ARRL's RESEARCH, won't you? As I recall, the 121-page
analysis they posted a couple of days ago shows the typical
receiver-self-noise and typical ambient-band-noise levels in each of
the HF bands, and also shows the noise level which could be expected
to be created by an Access BPL system running on power lines located a
typical distance from an urban amateur's HF antenna.

They've done the research, Art, based on what appear to me to be very
reasonable (and probably conservative) models of BPL behavior,
powerline configuration, and radio sensitivity. The data's out there.
Go look for yourself.

> If we are to use our number strength wisely for the benefit of
>the hobby then it would behoove the ARRL to be very specific
>with respect to the possible danger so that the label of

What radios are the memories being wiped out on ? I have a RS50 and have not noticed this problem. Hooked to it is an Icom 706mkll , Yeasu 757, Yeasu 440 multi mode , and from time to time various Alinclo 2 merter and dual band radios. Also for a short time a Kenwood dual band radio.

I started to jump the gun and say how could it gat a spike with the radios turned off but remembered most rigs do not have a real power switch any more. Sometimes I turn the rigs off and then the power supply, but most of the time I just switch off the supply.

Of course not! But if you live in an area criss-crossed by active lines, and have the sigs coming into your house you can expect some pretty strong interference.

> Say the proponents Prove that the noise level will
> never exceed S1 and state that the ARRL is over reacting !

I will accept Ed Hare's (and the other testers) figures. You could if you like come up with some of your own.

> If they also state that this benefits the majority of internet
> users (or total population)in that it can reduce costs by half,
> then ham radio would be in a very sad position.

It isn't just hams who use HF. Some homeland security type services do also.

Would you ever design a system that spills rf all over the place like this? Why on earth should we shield televisins, radios computers, etc if we are going to put a huge antenna up to negate all that shielding?

There are good ways to get a broadband signal into a person's house without messing up everything else.

Adn why should the internet have priority over everything else?

> Now I have heard it stated that from 14 thru 30 Mhz the actual

1154. RFI from the power cabling system and hams rights

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-10 21:40:04 UTC
From: Thierry <lombrytNOSPAM@hotmail.com>
Message-ID: <3f0ddd31$1_2@news.vo.lu>
Source record: 28677

RFI from the power cabling system : the righ technology for the right job...
A reprint from Peter Cochrane article, http://www.silicon.com/petercochrane
This document is a reprint from a short article published on Silicon website in which the author reminded how can be hard the fight against administrations when hams rights were derided.

For a decade now business plans have arrived on Peter's desk, in increasing numbers each year, but only a small percentage find their way to commercial success. Remarkably the author see very little correlation between plans. Here are his commentaries.

There is however a major exception where the same plan seems to arrive on my desk every year. Each time it is presented as revolutionary and ground-breaking. But it is always the same technology and it is always as flawed and as misconceived as the original I first saw a decade ago.

News reports often included to amplify the case are along the following lines : XYZ Company is proud to report broadband internet trials are underway using a ground-breaking technology that will revolutionise radio, TV, cable TV, internet and data services to the home. Existing electricity power cable can supply all of your digital services at speeds up to 50 Mbits. Extensive laboratory trials have proven this technology, and testing with customers is at an early stage. If fully successful a commercial rollout is planned within the next three months.

It is then customary to include a CEO interview that says something along the lines of : "All the obstacles have been overcome. The technology is now proven, stable and economically viable, and we are in a position to revolutionise the last mile. We also predict this technology will see the demise of the telco in the next decade..."

Partner companies usually keep their names secret in anticipation of further announcements to be made later that year and the technical press always seem convinced it is all true. But about 6-12 months after the announcements the companies involved quietly say they are ceasing trials and development because some alternative technology has been discovered. It then goes very quiet and nothing more is heard.

NB. Internet trials via the electricity cabling system : What say Europe ?

Similar trials are currently undertaken in Austria, Belgium, France, Germany, Luxembourg and Switzerland among other european countries by electricity power companies.

Such trials are in violation of the european regulation that states that "everybody has the right to use the frequencies at the condition to not bother the other users". However, it appears that these private or national

companies are far to respect this law.

Amateur radio is a service that we pay yearly and as such, if we can not practice this activity we should have the right to require an exploitation losse.

Unfortunately neither our national representative ham associations (DARC, UBA, REF, RSGB, etc) nor the concerned IARU delegation can oppose to this criminal practice.

Ham associations have discussed about this problem in the offices of the European Commission at Brussels, but without to get the slightest action or result up to day...

Confronted to such laxism and to lobbies that are standing by, recently Hilary, alias G4JKS gave up his fight against administrations, hence the publication of this article that the author ask us to publish as often as possible on the Internet.

I wouldn't find this so upsetting if it only happened once but to my knowledge there have been dozens of false dawns. If only the people involved would visit my office I could save them a small fortune. At a modest estimate, over $200m has been expended to date and no one has been successful in transmitting significant amounts of data over power cables to the home.

I can guarantee no one will get this technology to work as advertised. It might be appealing and economically attractive but I'm afraid the basic laws of physics cannot be sidelined. For anyone contemplating the waste of another $5-30m here is my 'don't do it' shortlist:

- Power cables employ low-grade plastic that is unfriendly to high-frequency signals as the absorption per unit length is very high. This alone precludes transmission of high-speed data over significant distances.

- Power cables are not physically symmetrical and are therefore very effective antennas. They radiate energy from high-speed data signals which becomes a source of interference for wireless services including broadcast radio as well as emergency, maritime, aeronautical, military and navigation services. By reciprocity they also suck in energy from every local radio source which further degrades data signals.

- As signals propagate along cables they become weaker but the switching transients from washings machines, refrigerators, vacuum cleaners, electric drills, light switches and other appliances are huge, do not decay at the same rate and swamp data signals.

- Switching transients on power grids with generators going on and off line, dynamic load sharing, fault and maintenance work, all induces massive transients that also swamp data signals.

- Cable joints, transformers, power meters, the on/off nature of electrical appliances and the topology of power grids create large load changes and multiple signal reflection points. This creates a dynamic echo environment

where the transmitted signal is further corrupted.

- Real time communications of any kind - whether by telephone, radio or TV - are taken out by the huge voltage transients inherent to power lines and ultimately the data rates achievable for non-real time are also very low.

- Transformers and power meters require a workaround as they present an absolute block to any high frequency signals.

This is a short disaster list that says this technology will not work. And the real nail in the coffin? Telephone and cables were designed to carry far higher frequencies than 50Hz power cables and in every aspect offer superior performance for all data applications. And more recently wireless technology is becoming so low cost and so high performance that signal processing requirements for data over power cables, even if it were possible, would be prohibitively expensive in comparison.

In many locations the power companies have installed optical fibre along their power lines for telemetry related to the control of power distribution. Because their data requirements are so meagre huge amounts of bandwidth are available. So it does make sense for wireless technology to be used at that end point, in a distribution mode to attack the last mile.

Despite all of this there are more than 20 power companies currently active across Europe planning or conducting trials. The reported field performance results are very poor, as expected! Installation costs are higher than the telcos and cablecos. Yet they still seem determined to become the biggest source of radio interference on the planet.

And the ultimate decider? It looks as though the politicians will be asked to decide between the power and wireless lobbies on the legality of the interference levels.

Contrary to a widely held belief, all the technology necessary to transform the local loop is to hand, and sporadic solutions such as data over powerline are a bit of an economically driven red herring.

So please, will the next candidate thinking of sending me another business plan with a revolutionary technology that will exploit power cables please employ someone who understands Maxwell's equations, data transmission and holistic economics.

This column was compiled in a hotel lobby between meetings and despatched via a Wi-Fi link that appeared without identification - thanks to whoever decided to provide this charitable service.

You're welcome, of course.

I just bought a TS-50 in May. I couldn't see being limited to 5 watts
all the time. The power on the TS-50 can always be reduced if I want
to do QRP operating, and a lot more easily than trying to increase the
power from an 817.

Excerpt from the ARRL Release:

"Studies appended to the League's comments suggest received signal
levels of BPL broadband noise at typical amateur stations would be
anywhere from 33.7 dB to 65.4 dB higher than typical ambient noise
levels in the worst-case situations. "BPL cannot be deployed using
amateur allocations in the MF, HF and VHF bands without severely high
interference potential," the ARRL reiterated. "

DD, W1MCE

The ARRL has submitted 120 pages of comments including analysis and
related data.

The BPL grid includes power distribution on medium power lines right
down to the 240 volt feed that comes right into your house!! Is that
close enough to create a +60 dB noise level??

DD, W1MCE

It is very easy to skip over my message if it annoys you. Just hit a
down arrow button. I wouldn't agree on the reading skill point, though.

> Did you ever stop and consider that because the responses to your original
> post were such, that perhaps the whole BPL matter is the usual ARRL
> exacerbated hyperbole?

Yes, I considered it for about a millisecond and then promptly dismissed
it based on my previous knowledge of the anti-League posts and feelings
from a small but vocal group of people. The only way you could get those
types on board against the BPL is if the ARRL took a pro-BPL position.
Then you'd never hear the end of it, and demonizing the League would go
on for years, like it has with no-code, for example.

> ....In the old'en days they called it "Much
> ado about nothing".

Yeah, sure. What, if I may ask, is your profession? If you are an
electrical engineer and you don't consider BPL (a dense, unshielded,
unbalanced grid of random-length wires carrying packets of digital
signals with all their harmonics straight to your shack) a huge
potential source of HF noise, then I don't know what to say. Have you
read on the subject? Have you seen the measurements from the field in
other parts of the world? All of this fails to convince you because you
know for a fact that this is just a conspiracy on the part of the ARRL
to swindle you for a couple of bucks?

Fine. Don't support it if you don't want to. Don't join the ARRL. Work
against it any chance you get. After all, CB has no representation and
organization and they've never been in a better shape, huh?

Not by KFS/KPH, though. AT&T closed their SF HF station (KMI) a
couple of years ago so I don't know who is furnishing that service
now. It may be ARINC (Aeronautical Radio, Inc) which is big in HF
SSB. I'll try to find out.

So, in other words you're not looking for independent opinions at all (as
per you original posting) because you've already made up your mind that the
BPL is a valid issue and anyone who disagrees with you is a simp. Sorry
Zoran, some people wont throw their hard earned money at an issue just
because you say they should.....

My god, do I actually have to explain this: The Amateur portion of the HF
spectrum is not even 1/6 of the total spectrum. The remainder is controlled
by COMMERCIAL and GOVERNMENT interests that have a hell of a lot more to
lose with BPL's than amateurs ever will. Do actually believe that the ARRL
is going to be the sole group that will rescue the bands from these evil
power companies? Get real Zoran.

If you cant take someone disagreeing with you, try arguing in front of a
mirror.

Yeh! and another little point of interest, in the popular TV series "Z-Cars" the little Pye PF1 was both transmitter AND receiver. But I suspect that was just pretend, too, just the same as in the later episodes of "Dixon Of Dock Green."

Incidentally, did you know that the Pye PF1 was one of the biggest single sources of accidents among the bobby on the beat? When you pushed the PTT switch, the aerial rod shot out. Quite a number of bobbies got the aerial up the nose and some even lost the little plastic bit up there. Nasty!

I have a quantity of GE Delta SX 470-512 MHZ radios, 8/16 channel control heads, microphones, speakers, control cables, handsets,
hangup switches, etc- the radios have been tuned to the UHF ham band for a project that I never finished.

If you are interested in anything, send me an email and I can send pics/pricing.

Thanks, Jim, KC1RM

Last time I flew to Seattle aboard a 757 I stuck my GPS up to the window and
read out the aircraft speed....526MPH.
Seems like they could use a more upscale comm system aboard planes when such
technology is that common.

Hi Dick,

It's a matter of economics and regulation more than design, but also
about design.

Electronic gear in the air must meet stringent considerations. These
are based on the simple fact of weight and power consumed. There is a
heat budget to meet, there is a power budget to meet, and there is a
physical volume budget to meet. Equipment must be designed to
co-exist with other equipment (they share the same heat vent, thus the
heat budget). There is also legacy systems to consider and to
interface to. The flight controllers had or have been using tube
equipment (no, not just their screens, some computers).

Much of this is probably already anticipated by state of the art
designs (except for the packaging). Heat and power issues are by and
large far less imposing than older stuff, but packaging still must
conform to other equipment that has no "modern" replacement.

Then back to the economics and regulation. ARINC places stringent
requirements that are by and large stringent in the top loading of
engineering time. That is, it takes a cadre of support personnel to
research and cross-correlate all the various issues demanded to find
its way into a product. When I designed the flight recorder, it was
to MIL-SPEC 883B which is no regulatory slouch. How much do you think
your HF rig would cost against such a standard? $30K would be a good
place to start. Then there is the retro-fit cost to meet the new
system. Abandoning HF for satellite means air and ground systems must
change to follow the trend (it is only a trend after-all) and this ups
the ante such that a large cadre of support people must be
co-ordinated to follow to a long-term schedule of mods and upgrades
(the schedule, in turn, having taken a couple of years to fashion).
Even changing the antenna type to follow the migration from HF to SHF

impacts the air frame and issues of flight safety. This may seem absurd on the basis of civil aviation which can opt into some gear, but commercial aviation must be done across the board.

Not to disagree with your point Paul, but the part that makes me uneasy is the
fact that government may wind up with little or no choice because of the
big $$$$$ politicos who seem to be able to buy their way into most anything
given the right connections to the right....well, you get the point.

But the ARRL sure won't be able to stymie that fact, either, with or without
our
piddling amateur contributions. Only knowledgable, responsiple people in the
right places -with the intestinal fortitude to hang tough and fight the $$$$
flow-
will be able to head off this impending HF disaster. I have no idea if such
individuals in such places even exist today.

Hi Paul,

Given the poor service rendered by the present administration across the board, it takes very little attention to recent FCC events to observe their wholesale indifference to the consequences of their own brand of one-answer-fits-all.

To expect that the other 5/6'ths of those affected will rescue this mis-step is dreaming in technicolor and surround sound. Those who might be affected will simply exercise their right to veto local implementation. Follow the money, there are one or two principals involved and their legislation and regulation has been paid for. The sad fact of the matter is that the current administration employs the balkanization of issues so that no single community has clout against the indifferent neighborhood. The FCC has attempted to consolidate the commercial market through the abandonment of serving community needs. They entirely ignored every comment that rejected this path; the people had to go to Congress to reverse this attitude. Those same aggrieved are wholly unaware of this new plight, and lacking their motivation, it will be a tougher hill for us to climb. I saw little discussion in this regard of consolidation, even though we watch the FCC closely which is to say we were just as indifferent, as a community, to this plight of community service. The simple fact of it is that our ox is being gored (we are not all that concerned about public service as we are about having fun). To put it bluntly, your neighbor will simply shrug off your problem and suggest you go to Radio Shack for one of those filter thingies - you may note the hint of an ironic smile offered.

For those who have NOT read the NOI, the FCC has carefully couched this BPL in the jingo of Homeland Security (sic) and describes this expressly as part of the solution of "the last mile problem" something I have already described in past posts.

Getting real means climbing out of the grave already dug before they throw in the dirt.

Hello to the list,
I am looking for the VOX board for a Galaxy GT-550. I believe it is the same one used in the GalaxyV Mk III. Anyone got one not being used? If not, does anyone have the jumper board that is used in place of the VOX board that allows the use of PTT in these rigs.

Thanks to any responses.

Can be reached direct at k5vse@voltage.net

And the following Richard, is why, when I wrote my own professional answer and filed it timely, that I noted as to the issue of security that we absolutely could not afford this for that among many reasons. I stressed that not only do we have the massive problem for intereference from the proposed service, but that a carefully contrived attack on the service itself from the outside made us terribly vulnerable to security issues if we were to allow this technique.

1190. FS: Kenwood TMV7-A and Compet GP-9 base antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-11 17:05:10 UTC
From: bearcat51@yahoo.com
Message-ID: <9014cad1.0307110905.67e9ba09@posting.google.com>
Source record: 28613

Hello, I have the following for sale:

1) Kenwood TMV7-A mobile dualband radio., which has also been modified and is in mint condition, used only a couple of times. All accessories included. Here are some specs for the radio from Kenwood's web site:
-Large, reversible LCD display (the display is also removable for the security conscious)
-Dual receive on same band (f2), in simultaneous receive on VHF and UHF bands
-Up to 280 multi-function memory channels (180 channels when using Memory Name function)
-Memory name function. Identify each channel with up to 7 alphanumeric characters
-"Five-in-one" programmable memory (store five entire operating profiles)
-Guide Function
-CQ Review - check it out!
-PC programming software available for download (requires PG-4S cable)
-144 MHz/440 MHz
-Optional VS-3 voice synthesizer
-Optional remote head kits
Power is 5 (low), 10 (medium), and 35 on UHF (high) or 50 on VHF (high).
If you want more info on the radio, here is a link to Kenwood's web site:
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-V7A&selection=Amateur&ID=25
Kenwood has a suggested retail price of $449.95 but I am asking $300, which includes S/H via UPS ground anywhere in the continental US.

2) Coment GP-9 dualband base station antenna. This antenna has never been used.
Here are some specs from Comet's web site:
It has a max power input of 200W, 8.5 db gain (146 MHz), 11.9 db gain (446 MHz), and a VSWR of 1.5:1 or less. It has an SO-239 or Female N-type connector. the antenna comes in 3 heavy duty fiberglass sections and is about 18' long rotal.
Here is a link to Comet's web site for more info:
http://www.cometantenna.com/base.html
Asking $125 for the antenna, which includes S/H (via UPS ground) in the continental US.

If interested in any of the two items or if you have questions, please email me at bearcat51@yahoo.com. Thanks!

The real issue for security is the deliberately contrived attack on the services. Who in the devil wants to risk all the network to terroristic threat from a purposeful intervention into the service. As I pointed out in my personal reply, the purpose of the service is really a point to point data link through a transmission line. To me it is bizzare that anyone would contrive to perform a service needing confidentiality on a transmission line technique that is wide open to disaster.

1192. question about 2SC2509 RF driver

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-11 17:09:41 UTC
From: Joe LeKostaj <joe@falseaddress2003.net>
Message-ID: <joe-D52398.12094111072003@news.covad.net>
Source record: 28620
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Can someone please check something for me on a 2SC2509 transistor if you've got one lying around? This is the RF driver used in the Kenwood TS-120/130 and probably others. I'm repairing one of these PA assemblies and trying to determine if the two transistors I've got are good or not.

Using the diode-check function of a digital multimeter, all the junctions test OK except for one oddity: there's conduction with the + probe on the emitter and the - probe on the collector (and base open-circuit). Can someone tell me if a new, unused part exhibits this?

I would normally consider it a bad sign, except:
- All the other junctions show the normal expected operation.
- DC beta checks OK (around 65) with a Heathkit transistor tester.
- Both parts test exactly the same. (unlikely if they're damaged.)
- Seems I've heard somewhere that this type of transistor with the emitter connected to the mounting tab (as oppposed to the collector) required an extra metallization layer which might account for the emitter to collector conduction described above.

Would appreciate any help with this. Reply either to the newsgroup or to K9LY at arrl dot net

Tnx & 73,
Joe

Tnx for the treatise, Rich, it clears up a few details that were hanging out there.

Clearly the revolution in technology is dependent on *other* factors more than on
the state of the art itself .
Which shouldn't, but as so often it happens, brings us back to
to the problem of "where do we go from here when the map is so ill defined?"

I can't help it, I keep being diverted back to the basics...all it takes for two
real radio operators to communicate is a basic radio transcieving system with very
minimal or even maybe no external support, and the skill to send and receive
radiotelegraphy....
Shucks, many of us recall when they used that system on aircraft!

Dick

Hi Mike,

You didn't go far enough. The leakage is prima facia evidence of
security loss. The government is the poorest employer of standard
civil encryption services (government meaning those various agencies
that are not affiliated with black box funding).

What was it - a couple of months back some (friendly ruski?) diplomat
sat in his car outside of a government office downloading their
activity with his snooper attachment?

Hi Dick,

One need only look at the defunct 500KHz emergency radio operation to observe that two radio operators was abandoned long ago. And it was "modern" technology in the form of a signature tone that moved it the first step away. And that was after the rules were relaxed (or put in place originally) to require 15 minutes monitoring of each hour.

In less than 100 years we went from spark gap to satellite technology from the Titanic to flight 800 - and neither of those two fared very well for it. In the millennium before, it was semaphore and smoke signals.

Clearly technology is taken up quite quickly by comparison. When I was in DC last year this time, my girlfriend was adjusting the rear view mirror and engaged the OnStar system by mistake (the buttons being located on the mount). Two decades before the best you had was CB, a decade before it was disposable cellular phones.

Yes, it works fine. The one thing you're likely to see (which is probably why Kenwood's none too eager for you to do it) is that the basic IF characteristics of the 850 are none too linear. If your rig is anything like mine, you'll probably see a MAJOR dip in response a few kc off one side of center, followed by a rise.

I opted eventually to go to a rig that has this feature built-in, the Icom 756.

Good luck;
Neil, K1VY

>when such technology is that common.

GPS and INMARSAT are common on newer aircraft. So is Air-Ground
Phone dial-up service (put your plastic into the slot in front of
your seat). Just wait 'till the bill shows up.

It's the same factor that kept the Interstate Police HF Radiotelegraph Net in operation into the early 70's even though wireline teletype had fully matured many decades earlier. The cost of dedicated wire lines, monopolized by one AT&T in those days, was just too high to justify. Plus some states and others hired personnel to do "double duty" with both commercial radiotelegraph operators and radidotelephone operators licenses so that they could handle interstate and
interdepartmental Morse messages, operate the voice dispatch centers, and do low echelon radio maintenance as circumstances demanded. Of course it's all gone now.

> > Wanna talk about Luddite methods of communication? How 'bout
> > per-message traffic handling by CW ????
> >

Evidently you've never observed a veteran, skilled CW message handler at work. Many would have given any voice traffic handling system a real competitive time of it, and some hams still do.

In 1972 I worked Bill Leonard, W2SKE, the TV news veteran, on 2 meters simplex when I heard him calling CQ /aeronauticala mobile. He was on a jetliner 30 m inutes out of Dallas at 30K feet headed for New York City, using a rig identical to the one I was using mobile at the time- a Drake TR22. All of a watt and a half on each end. He said he was holding his up to the window of the Boeing 707 (in the days prior to the banning of such operation) Our path didn't last long but we sure had a good noise quiet QSO while it did.
THAT was some pretty simple, inexepensive, unsophisticated but very workable technology. Looks to me that sometimes high-tech can get in the way of getting things done. But it's SACRED, and almost sacreligious to make such a statement.

>One need only look at the defunct 500KHz emergency radio operation to
>observe that two radio operators was abandoned long ago.

Only because of economic reasons. The "technology" worked just fine
but the shipping companies figured out a way to save $100,000 per
vessel per year, which is really peanuts compared to the cost of
operating a modern cargo vessel ($5000 per day to tie up at the
dock), by getting rid of the Radio Officer, and that was only in the
last 5 or so years.

>And it was
>"modern" technology in the form of a signature tone that moved it the
>first step away.

Do you mean "auto alarm" sequence? That wasn't a tone. It was
twelve (or more) 4-second dashes (3.8 sec. to 4.2 sec. by _my_
stopwatch) with one second silence between them. I inspected and
tested an awful lot of auto-alarm generators and receivers during
ship radio safety inspections over a period of 30+ years until the
GMDSS system came in and those inspections were privatized.

Standing watch by auto-alarm receiver was permitted only on cargo
vessels which carried one operator who was required to be on duty
eight hours a day. The auto-alarm watch could be used when the
operator was off-duty or on a break.

The four-second-dash auto-alarm signal was sent to alert other
vessels and shore stations that a Distress Call (with the famous
SOS) was following. On shipboard, if watch was being kept by
auto-alarm receiver, reception of the auto-alarm signal would
trigger a loud bell on the bridge, in the radio operator's cabin,
and in the radio room. One could not miss that activation !

The radiotelephone auto-alarm signal was a two-tone signal to
actuate a muted 2182 receiver on the bridge. It was supplanted by a
watch receiver on 2187.5 kHz in a Digital Selective Call system.

>And that was after the rules were relaxed (or put in
>place originally) to require 15 minutes monitoring of each hour.

Not quite.

The original pre-WW-II requirement was two "silent periods" of three minutes each, starting fifteen minutes after the hour and 45 minutes after the hour. During those periods, as well as when not actually sending and receiving traffic on another frequency, the operator on duty was obliged to monitor 500 kHz for distress traffic. After WW-II, a similar requirement was added for radiotelephone distress traffic on 2182 kHz, with the silent periods of three minutes each starting on the hour and half-hour.

Each radio room was required to be equipped with a special clock having the silent periods marked - a red wedge for the telegraphy silent periods and a green wedge for the radiotelephone silent periods, as well as red markings around the periphery of the dial for the four-second auto-alarm dashes.

Such a clock, made by Chelsea in six-inch size in a heavy brass case with an 8-day precision windup movement, would fetch about $800 now if one could be found, but a replica 10 inch diameter wall clock with a quartz movement (and all the right markings) is available on the internet for $15, believe it or not. I have one on the wall of my comm room / ham shack and it's just as advertised at:

<http://www.cafeshops.com/amradio,amradio2,amradio3.4044580>

(I'm not connected with them in any way.)

>In the millennium before, it was semaphore and smoke signals.

In 1965, in celebration of its centenary, the ITU published a wonderful "coffee table" book entitled "From Semaphore to Satellite" which covered the events and technology of its first 100 years including some very interesting pictures. I don't know if it is still available, but I was able to pick up an original edition when I was in Geneva on ITU business in 1967.

>Two decades before the best you had was CB,

Nonsense. I had a 2-meter transceiver in my car in 1958, which worked through a repeater in Los Angeles, crystal controlled AM, of course. Many of my friends who were hams did, too. By the time that the "CB" craze hit, we had 2-meter crystal-controlled FM rigs. My first mobile dial-the-channel synthesized 2-m transceiver (Icom IC-280) was in 1976 and my first 2-meter mobile transceiver with memory channels, variable offsets, CTCSS tones, and all the bells and whistles was in 1986 (and I was a "late bloomer" on that one) when cell-phones were still lunchbox-size and their coverage was spotty.

The 2SC2509 is popular bipolar RF transistor used as a driver transistor for
amatuer transceivers
(Kenwood TS-440) OR as the final transistor for low power (Yaesu FT70) and
CB transceiver usage.

Hello Dick:

I rec'd the following yesterday as you probably did as well;

SB QST @ ARL $ARLB043
ARLB043 ARRL files comments, studies in Broadband Over Power Line
proceeding

ZCZC AG43
QST de W1AW
ARRL Bulletin 43 ARLB043
From ARRL Headquarters
Newington CT July 10, 2003
To all radio amateurs

SB QST ARL ARLB043
ARLB043 ARRL files comments, studies in Broadband Over Power Line
proceeding

Pointing to a potential for interference to and from Amateur Radio,
the ARRL has called on the FCC to "take no steps" to permit
Broadband over Power Line (BPL). The League's 120-page filing, which
includes several lab studies, was in response to the FCC's BPL
Notice of Inquiry in ET Docket 03-104, published May 23.

Comment: OK, this is fine, however where are these studies posted and who
performed them? Is this similar to the only study the ARRL possesses on
CC&R's that was done in 1988 in Boulder CO (which is the 4th most liberal
place in the US). The League is pouring thousands of dollars into that
particular lobbying effort (CC&R's) and resting their laurels on an inept 15

year old study. When I started investigating the CC&R issue, I found out that the only evidence the ARRL had to persuade Congress (other than throwing $$$ at them) was this pathetic study.

ARRL said the Amateur Service should not be "gored with the double-edged sword of an incompatible service" that will at once cause widespread interference and preclude any future changes in the amateur HF allocations.

Comment: OK, this is still on point but wht does the league need my money?

Citing "diligent and exhaustive research," ARRL concluded that BPL must avoid any and all amateur MF, HF and VHF allocations without exception.

Comment: What "diligent and exhaustive research," ? When someone asks you for $$$, dont they usually give you some stated facts relating to the reasons for the request? This is like reaching into a box of unmarked resistors and assuming that the one you pick is the correct value.

"This interference potential, as a matter of both law and fact, disqualifies access BPL as a potential future competitive broadband delivery system," the ARRL said in its comments.

Comment: CASE CLOSED. Its already a matter of law. No money needed.

League studies show received signal levels of BPL broadband noise at typical amateur stations would be anywhere from 33.7 dB to 65.4 dB higher than typical ambient noise levels in worst-case situations.
NNNN
/EX

Comment: Typical amateur station? 33.7 dB to 65.4 dB from what noise floor? WHERES THE BEEF?

IMO they're just following the standard organizational philosophy, that being

"Get the money while you can, while you have a good reason to request it".

Seems all organizations now operate under this plan and thus they always have
funding
available (provided they can keep from squandering it on unnecessaries) during
times when they don't have a hot-button "issue" to scare contributers with..

1208. WTD : manual for General Radio dial drive

At one time I had found a web site where you could do a search for a particular model of radio and it would give your the 'history' of the eBay bidding for that radio -- would tell you the lowest price the radio had ever sold for on eBay and the highest price.

Does anyone have that URL? I've lost it...

Thanks - please reply here to the newsgroup.

1223. keying problem with IC-703 solved

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-12 17:08:37 UTC
From: Thomas Krull <df1hx@t-online.de>
Message-ID: <bepfal$2da$1@df1hx.dialin.t-online.de>
Source record: 28646

Hi !

In <bcqns3$3f5$1@df1hx.dialin.t-online.de> i wrote about a problem with the keying circuit in the trx IC-703, ser# 1201027, i decided to claim the warranty and i brought the radio to the local ham shop were i bought it.

On Monday (07/07/03) i got the unit back, Icom (Europe) has modified something in the radio to "decouple the power supply", thats what my dealer said when he gave me the radio back. He told me about three other IC-703 which were send to Icom (Europe) with the same problem. My dealer was urged by Icom (Europe) to tell the customer (me) to use the radio as much as possible to check if the problem is really solved...

I rearranged the same setup (antenna, power supply, morse key, cables...) including the location, arrangement of cables, counterpoises according to the setup where the keying problem occured.
Since the problem was worst on 30m (10 Mhz.) i checked that first, problem gone and got some nice cw-QSOs. Same on 80 and 40m, seems Icom (Europe) was successful in removing the problem.

BTW the 250 Hz (FL-53A) CW-filter works terrific i am very glad to have it in the radio now, the dealer did not have it in stock, when i bought the radio in May.

73s and nice weekend,
thomas [DF1HX]

Hi all

Was wondering if there is anyone out there who can help? I have just purchased a 7 element ATN 18-30-7 log periodic that covers 18-30Mhz. I believe there is another ATN aerial with the same boom length of 6 metres that covers 14-30Mhz. I was hoping someone with one of these beasts could advise the element lengths etc so i can convert mine to cover 20metres. I assume i will need to rearrange the elements, drill alternate mounting holes and change some element lengths and make some crossover straps for phasing harnesses but thats just a formality. My aerial comes with a diagram of the element lengths etc so was hoping someone could scan and send. I could start from scratch and try and design a unit but this would save me a heap of time. It appears that ATN is long gone. Any help would be greatly appreciated. I have quite a collection of amateur radio related service manuals in pdf and or jpg format so maybe i can return the favour.

email for reference is tstone12002@yahoo.com.au

Thanks in advance.
Cheers
Tony

1230. FS: Complete Drake Station w/ extras

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-12 22:55:55 UTC
From: Al Lorona <al_lorona@agilent.com>
Message-ID: <3F1091FA.907535F6@agilent.com>
Source record: 28553

Drake R-4A and T-4X, AC-4, MS-4. The receiver has some of the VE3EFJ mods, the transmitter is unmodified. A list of the mods follows:

1. New power supply filter capacitors mounted underneath chassis, original filter cans left in place on top.

2. Regulated +10V power supply replaces tube regulator. All original components left in place. (Receiver runs much cooler as a result of this modification.)

3. Audio power amplifier has been replaced by a solid state (TDA 2611) PA module. Again, the original tube and components are still there.

The VE3EFJ mods are well-documented. I have a copy of them that I can include with the manuals, but they are also available on the web. Search for "VE3EFJ drake mods".

The receiver has a full complement of JAN crystals (purchased in 1997) for the following bands:

1.5 - 2.0 MHz
4.5 - 5.0 MHz
9.5 - 10.0 MHz
14.5 - 15.0 MHz
18.0 - 18.5 MHz
20.0 - 20.5 MHz
24.5 - 25.0 MHz
28.0 - 28.5 MHz

Therefore, you have transmit on 160 m, 17 m, 12 m and 10 m bands, with receive of most WWV frequencies and some shortwave bands.

I have digital photographs that I can e-mail to you showing the equipment, mods, cabinets, etc. (Sorry, I don't have a web site where I can post them.)

All interconnect cables included.

Both original manuals in very good condition. (Photo available on request.)

In addition, I purchased a number of new Drake parts when the Drake factory
liquidated itself of all parts in stock a few years ago, which are included in the deal. These mainly consist of IF cans with coils, switches, a 5945 kHz crystal, spare PC boards, etc.

I also have four 6JB6 tubes in original boxes that are part of the package. These are spare finals for the transmitter.

To sweeten the deal, I will include a (fair condition) Shure 444 microphone with the difficult-to-find right-angle Drake-sized mic connector.

I am in the Los Angeles area and would really prefer to sell to somebody local. I will deliver to a 100-mile radius.

Price: $270.00.

Thank you for reading. Please feel free to reach me by e-mail, or by telephone at 626 390 3257.

Regards,

Al W6LX

Well I use a Tennadyne T8 for 13.5 to 30 MHz. It is a 6 meter [18 feet] boom. I am not familiar with the ATN 18-30-7 LP.

But, LP design is based upon a specific ratio for adjacent lengths and element spacing. So, just 'fiddling' with adding elements and adjusting spacing gets to be serious business. You will have to re-space ALL elements on the boom, and increase the length of ALL the elements to achieve the desired ratios.

The ARRL Antenna Handbook has an excellent section on LPs. Buy or borrow a copy and read up on LPs. It's quite a project!

Dear Tony (VK2TS):
Nice to see a real antenna question from an actual radio amateur...
It seems to me that two of your choices are:
1. Distributing seven elements on the same boom using the same attachment points. All except the front (smallest) element could be lengthened by a constant ratio so that the rear (longest) element is self resonant at about 12 MHz. An estimate for the ratio by which elements are lengthened may be found by dividing 18 by 14.
Seven elements to cover the octave you are interested in on a six meter boom is OK, but a longer boom and a few more elements can provide less variation in VSWR with frequency and more gain.
2. It sounds as if the boom you have is of one piece. [One alternate scheme for the boom of a LPDA is to construct the boom in two pieces so that the boom is also the transposing transmission line.] I say this because you mention "crossover straps for phasing."
Thus an alternative is to leave what you have alone and extend the boom. Place additional elements along the extension spaced with the same ratio presently used and having lengths that progress with the same ratio presently used. This might involve the least amount of work and certainly would produce a better antenna. The extension of the boom might be a size larger than the present boom so as better to support the longer elements and so as to facilitate "splicing" to the present boom.

Extending is what I would do.

I am planning on getting a 920 in the next 2 weeks. I would like to hear from any and all who have operated this rig. I would like to hear the good and the bad. I will be using this rig for 6 meter work right now and future HF. I read the reviews on it and I really like it alot but would like to hear the opinions of the operaters themselves.
Thanks

Hi Mac

The lengthening of the boom and the further scaling of larger elements does sound like a damn good idea ! Thanks for the ideas,,,,much appreciated.

Cheers and 73's

Rob,
For the same price, or less, you can get a used IC756. I find the band scope invaluable on 6 meters. Also, it is overall a better radio. I use it on 75 - 6 meters. Transmitted audio sounds better. Receive audio is soso. There was some problem with early models; so, you would want serial number above about 3000.

I also have an FT847, which I use mostly on 2m and 432, which neither the 756 nor 920 has.

My first preference would be to mount the HF antenna to a bracket which is attached to the spare tire mount on the back. That way you could also mount the HF antenna on one corner and a VHF/UHF antenna on the other. This way it's convenient to install and service, and doesn't require drilling holes in your roof. Just make sure you've got a VERY GOOD grounding. Use a wide braided strap (like engine block ground cable) from the antenna mount to the nearest vehicle frame bolt.

My second choice would be to use a magmount on the roof. Just make sure it's the one with 3 pancake magnets to withstand the wind at highway speeds.

Lead the coax and control cables under the vehicle, tie-wrap it inside the frame, and then up into the driver's area. I'd do the same with the power cable from the battery (remember a fuse on BOTH power leads) unless you found a handy plug in the firewall.

Message-ID: <7DdQa.47043$GL4.11877@rwcrnsc53>
Source record: 28565

I would just make the car "radio ready" and plug it into power and antenna when I wanted to go mobile.

To do this I'd install a magmount in the center of the trunk near the back window using either the "fold-down" or the removable whip style. Make sure you scrape the paint off the underside of the trunk lid where the pointed setscrews bite into the metal to get a good ground. Then I'd run the coax thru the back seat area, under the rug and up to the driver's area. I'd run the power cable (remember the fuse on BOTH WIRES) thru the firewall plug or under the car and up into the driver's area.

Dear Tony: You are welcome.
What might, or might not as I have only minimal information, prove to be the easy way to scale the new elements is to realize that the tips of the new elements will be close to being in line with the tips of the "old" elements. This is close enough particularly if, to maintain the principle of each element being designed to fail with the same amount of wind/ice pressure, the majority of the ends of the new elements are of the same diameter as those of the "old" elements. In other words, if the original antenna was designed to the above principle, the new elements will look like the longest "old" element with added buts that are larger. Having the additional boom be the next size larger than the old boom facilitates this and the splicing of the booms. Consider a "plastic" rope strut to stiffen the boom.
Ice may well not be a major consideration for you as it is here. However, a few years of wind induced vibration has a tendency to damage the places where the longer elements are attached to the boom. Internal and/or external boom/element sleeves in those areas can extend the lifetime significantly.
Keep us all posted on your progress. Several of us will be interested in the specifics of the original antenna.

1245. FT-8900 Automobile Mount

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-13 18:27:55 UTC
From: "Its different"@again.com
Message-ID: <vh38u989u3jg88@corp.supernews.com>
Source record: 28568

I need some suggestions on mounting a Yaesu FT-8900 in my car, insofar as being able to quickly remove the radio upon exiting, lest someone do this for me during the night.

I have thought that the following might be good, but I can't seem to find a supplie that has both components, actually I can't find one of the components anywhere.

http://www.sdi.cc/radio1.htm

SDI 1050- 4 PIN SLIDE MOUNT I can find these online.

and the

SDI 550- FIXED ANGLE BASE 25 degrees or the

SDI 560- FIXED ANGLE BASE 50 degrees These last 2 I couldn't find a supplier for on the web.

Anybody have any ideas about the constuction and feasibiliyt of the slide mount and where I could purchase both items? 1 Slide and 1 Base

Actually, while researching this post, I finally found a site that offers the slide mount and the base. I am open to suggestions on somewhere else to buy this stuff, and if it will be OK to use a slide mount for VHF/UHF connections.

http://ecwest.com/shopping/PriceList.asp?Brand=65

Thanks.

Never say never.
Nothing is absolute.

I'm rather surprised that any amateur would dismiss the BPL initiative, or be so cynical as to believe that the appeal for funds in this case is the ARRL "crying wolf". Most of you have a search engine and I suggest you look up the studies done to date on the effect of BPL on the HF and low VHF spectrum. I particularly suggest checking the results of tests in Japan. And take a look at the relevant articles in the Web Extra section of the ARRL website.
If you don't want to contribute money to the ARRL's efforts to fight the BPL initiative, then may I suggest you look up the comments filed on 03-104 and file some well thought out reply comments; we have until 6 August.

>

BPL is bad for Amateur radio operations. Anyone who speculates that it
won't be as bad as they say, then does nothing and waits for it to
happen and then finds out there's a high, broadband noise on your
favorite band it'll be too late. Once it's in place you'll have a very
tough uphill fight to do something about it.

Sorry, but there is no excuse for being complacent, (thats a nice way to
say sitting on your dead ass and doing nothing because you're
satisfied).

ARRL is our voice in Washington. Every other special interest group has
a contact in Washington, then why shouldnt we.

If you value ham radio then you should support the ARRL.

Dale Kight ripped me off for $200 in May of 2000. Took my money and
didn't deliver the equipment. (Check the archives for my posts in
July of 2000) He lives in Maui, so is hard to get to. Some day I
will take a vacation trip to sunny Hawaii.

Gary Dion, the fellow who had the latest go-around with Kight, was
lucky to get his deal completed, in my opinion. And then there was
some fellow who was taken to the cleaners by Kight around 1996. I
think it was Alan Gray, W3BV.

So I would like the thread to continue as long as possible.......

Be careful of this guy.

73,

Mike Fallon K6YOQ

The FT-920 tends to splatter a lot. It is easy to overdrive and when used with an amp causes a lot of unnecessary trash.

A friend of mine had one and sent it back to Yaesu on several occassions. They never fixed it.

Go with the ICOM. Or get a used FT-1000MP. Ive had one for six years and still going strong.

1259. ft-980 problem...

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-14 00:11:19 UTC
From: Joel <joel@cyberbest.com>
Message-ID: <1zmQa.3748$X33.1339306002@twister2.starband.net>
Source record: 28582

I have a intermittent problem with a Yaesu FT-980. Every once and a while, I will loose SSB and CW reception. AM/FM still work fine and I can see the S-meter is still working, but I have no audio out. I figured it should be easy to find except every time I open the cabinet, it starts working. I can sometimes cause the problem to happen by flicking the on/off switch on and off a few quick times. At Field Day the generator ran out of gas and when we got the power back, the 980 wouldn't come back on. Then out of the blue, it started up and ran the rest of the time. The display and led are always correct so I doubt it's a CPU issue.
Anyway, does anyone have any sugestions of where to start? I have run with the cover off for a while and it's doesn't seem to happen, but then again. I can god months without any issues. This problem has been around for 10 years, on and off. But I sure would like to get it fixed.

I did a version of this while hiking.

Standing on top of a 3200 foot mountain (Monadnock in SW NH) helps the
range of a 5W HT quite a bit.

I was bringing up two different repeaters on 145.230, the Boston one
with a PL tone, and one in Connecticut that didn't. A bit confusing
for someone in Boston who couldn't hear the guy on the Wilton
repeater.

Some consideration, and perhaps the use of PL tone repeaters, is
helpful.

The Alinco DR-135T is close to what you are looking for without spending a lot of $.
You can purchase a "Computer Mouse Size" GPS (Garmin GPS-35) with the 9pin serial/cig cable
and make a short adapter and plug cleanly into the Alinco's data port.
I was looking for similar to your post a few months back, and this was the best I could come up with.
I have the configuration information on my website, so look me up on QRZ.com

Good Luck..

I did also try 520 simplex and raised someone about 40 air miles
northeast of there, in South Manchester, NH. He had a mobile rig in
his house, IIRC.

It would be good if more people were listening on the major simplex
frequency, as that would be used for distress calls in the absence of
a specific repeater.

Geez. Well, I did a MOD on 3 July for an address change. Will report back
once results arrive to advise how badly it screwed things up.

--

Well, my license with the new address arrived 10 July, 100% accurate - and
I'm on the Left Coast, so they have a very quick turnaround.

No problems from doing MOD rather than AU as far as I could see.

I have an Icom IC-T90A package for sale. The radio is only 2 months
old. It has only been used a few times. I bought it on an impulse
buy. It comes with the desktop rapid charger and filtered cigarette
cord. I have all the boxes and manuals for everything. I have over
$400 invested, but I will sell the package for $300 shipped. Please
email me if interested.
Thanks
Tony
UPDATE: This also comes with an extra box, manual, wall charger, 6mtr tip,
and swivel belt clip. MUST SELL....$300.....OBO

I accept Paypal

I owned a FT920 for several years. This is a great radio for the money. The DSP isn't as good as the 1000MP versions, but all in all a great radio to operate. I found the receiver to be as good as anything else on the market.

Worked great on 6 meters too!!!!

You can find used FT920's for around 700 dollars on qrz and the rest of trhe used URL's.

I'm glad that it worked out. I received the above advice from
Darlene Reeder, a good advisor and colleague who was the longtime
chief of the personal radio services license processing section at
the FCC's Gettysburg facility - now retired - when I had to change
the address of three ham licenses (myself and two relatives for whom
I handle the paperwork), two ham club stations for which I am the
trustee, and a GMRS license.

As Darlene said, the AU is far less keystroking than the MOD - less
chance for the program to screw something up.

Perhaps the computer programming folks got their act together
during the ensuing time (don't bet on it). Maybe you were just
lucky or skillful.

Have fun.

Rob,

I own an FT 920 and I'm listening to it now. It is a great rig with terrific audio. I have a INRAD 400hz filter installed for CW and I'm very satisfied with the radio. I also own a FT 1000MP and find not much difference in basic receiver performance. The MP has a lot more QRM fighting tools, but the FT 920 gets the job done in a simpler fashion.
I've listened to the rig on six and it shines there too. I think you will be very satisfied with this rig.

I would suggest, however, that you try and listen to one yourself if possible. Also, listen to the Icoms as well. Everyone has a different ear for rigs and nothing beats listening for yourself before plunking down your hard earned money.

Tony,

Adding more elements seems like the only practical solution. You would probably have to add 6 -8 feet to the boom, and 2 more elements. Keep in mind the longest element will be about 38 feet long. That is why they make the 18 -30 MHz version. BTW, Tennadyne used to make an 18 -30, but I don't see that listed on their web site any more. You might want to check them out anyhow for any ideas.

Oh, come on, using the 555 for a keyer in this day and age is bad
enough, but this is just plain ridiculous. No iambic keying, no
automatic 3:1 ratio, no memories, no solid-state keying, no QRQ...

Use a Curtis chip or an ePROM and be done with it. What is this... the 60's?

Source record: 28427

I've had one for 11 years. Works very nicely. Accessories, like filters, are probably hard to find new from Kenwood but they do show up for sale occasionally. Easily modified to work more than the ham bands it was originally designed for. Also works very well for AMTOR/RTTY/PACTOR (using a PK-232MBX) as it has a true FSK input and a RTTY filter position.

They are probably worth more to the seller than the buyer would like to pay. It's a hard rig to replace, as the newest Kenwood is ugly, leaving only rigs such as the Icom 706.

Very clean IC-746. Non-smoker. Comes with 500HZ CW filter, W2ENY upgrade AM filter, hand mic, power cord, manual, original box. It appears that all of the backlight transistors eventually fail- Icom has replaced the transistor in this 746.
$800 + UPS shipping CONUS only.

Pretty good radio. I wouldn't hesitate to buy one anytime if it were
in good shape. I like the TS-850 even better. I like the TS-950 even
better than that..:/ They are all kind of "look alikes" as far as
style etc...The 850 is a baby 950, as the 450 is a baby 850.. You can
get it with the internal tuner if needed. "TS-450AT" MK

Extremely nice Drake R-8 Shortwave Communications Receiver. Receives from 100 khz to 30 Mhz. Very good condition and hardly used by second owner. Very clean and well kept in a dry and immaculate area. Price is $475.00. I will pack it for the rough treatment it probably will get from UPS and you can pay shipping. Willing to negotiate some on price but not too much from the market either. Thanks for your interest and viewing my ad. If you have any questions, feel free to contact me at w9sun@hotmail.com

Let's see, we have several hundred thousand amateur radio enthusiasts' needs to consider versus hundreds of millions of computer/data users' needs. Who do I think will win? Come on, get real.

Save your money for a new electronic doohickey that will utilize the increased bandwidth with which we are about to be blessed.

Change is inevitable - resistance is futile.

Yes, but we're talking licensed service opposed to an unlicensed money
making operation. Legal protection we have a right too. The broadband
has no license therefor they have no legal protection from us. They
must demostrate no harm will come to our licensed service. I don't
think they will be able to do that.

Dear hams without manuals,

Available to donwload, the FT-840 manual plus *schematics* at:

http://www.pt2rod.qsl.br/hamradio/FT-840 (beware: big files!)

And, VX1-R manual and other stuffs at:

http://www.pt2rod.qsl.br/hamradio/VX1-R

Have fun! ;)

What's the old story? Oh, yeah. Lawyer moves from the East Coast
back to a small frontier town, back sometime in the 1800's. Six
months later, he's nearly destitute... nobody in town needs a lawyer.

So, he writes to an old school friend of his, and encourages his
friend to move to the same town and open a competing legal practice.

Ten years later, they are both sufficiently wealthy to retire in
comfort.

I'm looking for an old QST article " A Three-Chip Microcomputer for Your Station,"Aug. 82 that shows how to interface an Icom 701 to a PC.
Anyone have any info on this or other interface techniques for this old set?
Thanks
Joe

I hire lawyers to do work that I personally don't care much for
and am not good at. (They pay me to do things they aren't so
good at either, so this it's a good deal both ways.)

Dealing with legalities is not something which happens because
someone is "forced" to deal with another lawyer. Instead, it
happens every time you do something that is affected by a law,
and laws are written by politicians (who unfortunately are often
not lawyers and don't have a clue what they're doing when the
pass laws). In fact, dealing with a lawyer in the first place
is the best way to avoid having to deal with more lawyers later!

I hope your view prevails, Dale, and the bandwidth that is needed is found in some less harmful way, but I am not optimistic. The greater good comes into play. That doesn't even take into consideration that large amounts of money are involved, which alone would be enough to sway things their way.

The only saving grace we have is that we do function, or can function, well during times of emergencies. Let's hope that is enough to pull our bacon out of the fire.

Ever here the saying "Money Talks and Sh*t Walks"

If you think your license is going to protect your interests OR the
ARRL will help, I doubt it.. The Greedy "Unlicensed MONEY
Making Operation" has more GREEDY LAWYERS who will ride
rough shod over anything or anybody that gets in their way..

They also seem to have a way on occasion to INFLUENCE
politicians, Usually with contributions to ReElection Campaignes.

Ed Cregger, NM2K Has hit the nail on the head in his above post.

Just My Opinion

Bob

>into play.

That would be a valid point, I think, *if* BPL were the only
alternative for delivering bandwidth.

In point of fact, though, it isn't. There are quite a lot of other
alternatives available today - cable modem, DSL and other
telephone-line-pair technologies, fiber-to-the-curb, fixed-wireless
using licensed bandwidth, and so forth.

One of the claims in favor of BPL is that it would allow bandwidth
delivery to remote areas (to which it is economically difficult to run
DSL, string fiber, etc.) by re-using existing powerline copper.
However, as various comments on the FCC web site have pointed out,
this is much easier in theory than in practice, because:

- The radiative loss of BPL signals will be fairly large. Delivering
BPL to remote areas will require the addition of
periodically-spaced amplifiers (as are used in cable-TV systems) to
boost the signal. This will add quite a lot of cost, and perhaps
add reliability problems as well.

- Large portions of the power grid will have to be retrofitted with
add-on bypass filters to allow BPL signals to "route around" the
various transformers, etc. which currently block out most conducted
RF (done by design, to block conducted RF noise on the lines).
This will once again require adding equipment, and could also
require the recertification of existing equipment to make sure that
it can tolerate the much-higher levels of RF noise.

So - BPL may not actually have an economic advantage, compared with
other technologies which [1] already exist and [2] have much lower
RF-interference potential.

Long-distance "pure" BPL - the sort which one would let you establish
broadband support for widely distributed rural areas without needing
additional infrastructure - really doesn't seem to make all that much
sense to me purely on the basis of bandwidth. You can only shove a
certain amount of bandwidth over the lines... if you try to (e.g.)
provide broadband support for a whole rural county this way, you'll
end up with bandwidth congestion which will make an overloaded
cable-modem system seem like greased lightning.

To distribute a substantial amount of Internet bandwidth over a geographically-broad area, you're going to need some form of higher-bandwidth backbone (e.g. point-to-point 802.11b or a similar wireless technology) plus a local-distribution capability. Wiping out HF communication country-wide, just to make it convenient to get the data over the "last mile" from a downlink site to the house, really seems like a lousy tradeoff to me.

We might be a lot better off, as a country, taking the money would would have to be spent retrofitting an RF-hostile power system to carry RF, and instead using it to speed up the deployment of fiber-optic networks.

> That doesn't even take into consideration that large amounts of
>money are involved, which alone would be enough to sway things their way.

That, to my mind, is much the bigger problem. Money talks.

>The only saving grace we have is that we do function, or can function, well
>during times of emergencies. Let's hope that is enough to pull our bacon out
>of the fire.

That's one of our biggest arguments against BPL. In these post-9/11 days of Homeland [in]Security, being able to provide very real, decentralized communications support is a very strong talking point.

It may be a hopeful sign that California Governer Davis just signed a bill which brings California state law into conformance with the FCC PRB-1 ruling. Davis vetoed a very similar bill three years ago. Times have changed, at least a bit...

Yeah, you know I just took a quick scan of the HF spectrum. Looks like most of the modern world has relinquished HF spectrum for more consistant, secure means of long range communications.
There's a few spanish speaking mariners off the coast of Chile on 8MHz, but they're waiting for some surplus AMPS cell service to show up. The same drunks on 75 every night bitching and moaning about not getting laid, 2 guys a day die at the mic on 40 trying to spark a nail while explaining their med
regiment, 20's got would-be broadcast engineers schmoozing us with swideband audio, effectively demonstrating how to make inefficient use of spectrum as the DX'ers yelling numbers across the pond. From there up to through 10 its kinda dead...except 27MHz. There's always an elevated noise floor and some potent SKIP signals on 27MHz.
Both amateur bands on either side can be dead quiet while half the iron EF Johnson ever made is pumping square waves on Channel 6. I really shouldn't mention 27MHz though because thats, well thats CB.
Its probably a result of that band selective propagation problem I noted earlier.
I really hate to be the devils advocate, and I have have enjoyed the romance with ham radio that many others from years gone by have experienced, but we may soon be exposed to the same hassle the 8-track got when cassettes showed up on the front seats of our Chevelles.
Unfortunately, the FCC has been reduced to auctioneers, directly accountable to scuzbucket politicians eager to sell off anything possible to maintain the facade.
The lucky ones leave the FCC to assume cushy positions at corporations they help during thier tenure, quite blatantly I might add. Hell, some have left to start
companies that intentionally try to destroy industries(LMR/SMR) to achieve thier means(certain cell carrier with push to talk feature)
I'm probably gonna send Newington money anyway. They irritate sometimes, but they're the biggest gun we have. I'd really miss the natural sound of an HF
radio set, and the character and tradition of our HF presense. How 'bout you?
My argument is that BPL should be high pass filtered with a 30MHz cut-off. When the leakage of data begins to propagate erratically in the lower
HF region, there may be fragmented co-node interference that may be a duplicate color code match, causing network disruptions.
Another more basic issue is, Commonwealth Edison can't keep thier 60Hz primary product from leaking. How the hell are they going to handle a sub

carrier service on ratty grids maintained by employees that think the power
is
good because your lights are on?
And finally, the sacrifice of the lower 28MHz (2-30) that is alleged to be
affected
will not drastically affect the massive volume of throughput that will be
crammed
down the throats of so many, or the massive volume of cashflow that will be
enjoyed by so few.

Hi all;
I have for sale a VHF/UHF Scanner.
This excellent condition Scanner is the Realistic model PRO-2010 .
I covers probably all the frequency ranges that you will most likely need.
Please picture of the Tag for these freqs.
The Antenna is Nice and Straight with provision to add an outdoor antenna also.
Has 20 memories, built in Speaker and Power supply, has direct access frequency setting.
Just plug er in and go!
Great for your Den, work shop, garage, office, ham shack, etc.
This way youll know everything that is going on Locally :-)
Tested and Works fine, volume control is a tad scratchy, is all!
Price is $25 + shipping!

Hi All;
I have these excess camera items for sale;
1)excellent condition, Electronic Flash gun is Made by ALBINAR, model 90 MDT-Z
Thyristor type.
It takes 4 "AA" batteries, not supplied.
I put in some batteries only to test it. It charges fast and has a very bright
flash.
The head twists just about every-which way. The Head also telescopes to allow
for far out shots(see pics), thats why I figure it powerful.
Price is $20.00ppd

Hi All;
I have these excess camera items for sale;
This excellent condition, Like-New Telephoto lens is made in JAPAN by CHINON, Ltd.
It comes with Lens covers and case.
Has a Built in, Pull out Lens shade also.
It is in Like-New condition and has Screw mount threads .
Price is $35.00ppd

I am in need of a manual for an RF concepts 2-417
2 meter amplifier. Anyone have a copy that they
could scan and send via e-mail or copy and send
via USPS. I will pay copying charges.

There's always a helluva wrangle over most every aspect of
HF at each and every WARC, gotta be some serious interest there somewhere.

>
> My argument is that BPL should be high pass filtered with a 30MHz
> cut-off.

There are a number of public safety agencies who still make serious use of lowband
VHF below 50 mHz, all the trunked systems nothwithstanding. Converting those to
UHF or up is a big $$$$$ proposition which just aint gonna happen iin the financial
climate facing those users for the forseeable future
. The state I worked a career for that uses a series of frequencies in the 42mhz
region for statewide public safety comms
would love to abandon it all in favor of a trunked UHF or above system but can't find
the ~$250mil it'd take to do the job. I'd expect that state and several others that
I know are on low VHF to have some pretty strong language for the FCC on the BPL
issue.

> enjoyed by so few.

If FCC wants a real hornets nest to descend on DC they can assure it by approving
the
BPL docket without many very serious limits, big chunks of frequency exemptions and
much other machinations to releive in advance a huge amount of what will be real

trouble for them if they don't. And no one knows if it would even work acceptably then, much less if there will ever be a viable business plan stem from it all. Who knows what emerging technology will render the whole scheme obsolete sometime next week?

1356. National NCX-5 transmit/receive offset problem

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-17 16:29:17 UTC
From: kc0atc@qsl.net
Message-ID: <a444e1b1.0307170829.5df6087b@posting.google.com>
Source record: 28529

With Norm's posting from last January, I know I am not
the only one experiencing a strange transmit/receive
frequency offset problem with the old National NCX-5
transceiver.

http://groups.google.com/groups?hl=en&lr=&ie=UTF-8&oe=UTF-8&selm=uNmZ9.65821%24lj.2541305%
40read1.cgocable.net

He contacted me and we have together worked on the issue
from many angles. The first concern was the receiver
offset tuning circuit. That checks out ok. And the
VFO looks ok too. Now he has found a document which
seems to imply this is something in the 1st or 2nd
transmit mixer.

I'm wondering if this is a problem with the old mark I
rigs when they were converted to a mark II. It seems
odd that the factory would ship a rig with an offset
problem. Maybe some key component has gone bad with
age.

The instruction manual has a single paragraph about checking
for this condition, but it has no instruction about
what to do if the condition is found!

So far, I am working around the problem by using the
RIT control to syncronize the VFO between T/R
while listening to an external shortwave receiver
lightly coupled to the VFO.

It would also seem that the need to "get around" the isolation provided by
the local distribution (120/240) transformers from the HV lines would mean
that filters of some kind would need to bridge lines operating anywhere from

2.4kv to around 21kv to the low voltage lines into the home. Not a trivial task to do economically and safely. It seems like there would be potential (pun intended) to degrade both the reliability and safety of the electrical distribution system.

Nah for 0 MHz -- have a switch labeled 0 MHz -- fed by a battery.

Its the 0.00000000000000000000000000000001 Hertz that will be a problem

All in good fun.

Seriously you need to decide on accuracy and stability first which will
dictate whether you will be building an analog, or synthesized unit.

For an analog homebrew project -- see URL:
http://www.vintage-radio.com/projects/signal-generator.shtml
Covers 150kHz to 12 MHz. For the lower frequencies -- get a hold of some of
the later solid state Heathkit Audio generator manuals.

Or from scratch -- consider the following books:
http://www.sss-mag.com/cosc.html#books

Work that needed doing, only because lawyer's were involved at some
point.

> Dealing with legalities is not something which happens because
> someone is "forced" to deal with another lawyer. Instead, it
> happens every time you do something that is affected by a law,

law == lawyer droppings

> and laws are written by politicians (who unfortunately are often
> not lawyers

Huh???

I know your .sig says Alaska, but that doesn't sound like the USA
that I'm from! Maybe in Alaska it is different, but in the USA as a
whole most lawmakers ARE lawyers. In fact, some wag once claimed
that lawyers were the larval stage of politicians.

In the USA, the law is/was supposed to be created by and for
non-lawyers to understand. It isn't any longer. An amendment was
nearly ratified to ban lawyers entirely. Instead we now have:

> In fact, dealing with a lawyer in the first place
> is the best way to avoid having to deal with more lawyers later!

Because the lawyers have been too much involved in the law, and it
gets created and twisted so that only lawyers are allowed to
interpret it. If you try to skip that step, as you note, the lawyer
cartel is likely to come after you.

That old saw, coupled with the "if you build it, they will come"
didn't work when I retired from an over-full desk of cases in the
Federal service to an empty desk and lots of scrounging as a sole
practitioner in the private sector.

I loved doing the legal work. I hated running the business.

And "they" didn't come - I had to go out and snag them.

I hated that, too. So I retired "for real" and do just about as
much (free) legal consulting as I feel like doing.

There will be a big market is 'serious' amplifiers. BPL will be knocked for
a loop so often it will be rendered useless.

Not to mention the court cases that I HOPE will follow. We are the LICENSED
service.

One more thing. Remember the FCC and their decision to increase a owners amount of radio/tv stations he could hold? Well a committee in congress has put a kink in that plan.

I think we hams and other HF users should do the same thing. Write ALL your reps in congress. The FCC is obviously not qualified to do what it is doing. Anyone that even considers deploying BPL is braindead.

This should be simple. Using Kenwood's data cable, wire 1, brown, should go to pin 1, wire 2, red, should go to pin 6, wire 3, orange, should go to pin 3, and wires 4 and 5 both go to pin 5. TNC will not key radio. What did I do wrong, or do I have the wrong pinout??

Wouldn't surprise me. The FCC requires the use of the least amount of
power needed to establish a given mode of communication. If BPM fills
the whole HF spectrum with S9-level fog, then QRP will go out the
door, and maximum-legal power will become technically necessary to
"burn through".

I'd hate that. So would our neighbors. Expect a big increase in
TVI/RFI complaints.

Similar things might happen with other licensed HF services... they
may also have to crank up their power.

>Which is exactly why the FCC didn't authorize the 136 hz sliver band for us,
>right?

My recollection is that the FCC turned down the LF allocation,
primarily due to claims by the power companies that even low-power
amateur transmissions could interfere with their existing LF powerline
control systems. It wasn't an issue of bridging past isolation, I
think.

The existing PLC architecture is (I understand from reading elsewhere)
designed to work within the limitations of the power grid... it can
deal with the degree of RF isolation between one section of the grid
and another, and in fact I think it actually depends on this to some
extent to allow for region-limited control.

The power companies' stated concern was that even a relatively
low-power and inefficient amateur LF transmitter (a few watts, on a
short antenna) could create enough low-frequency RF voltage on the
lines to cause their equipment to malfunction (by overdriving and
saturating the RF receiver stages, I imagine).

As the ARRL and others have pointed out, there's a _very_ obvious
disconnect between this claim (which the FCC has accepted), and the
apparent claims of the BPL proponents that BPM systems can co-exist
with amateur-radio and other licensed band users, operating with
much higher RF power levels and much more efficient antennas.

In fact lawyers *are* the only ones allowed to interpret it.
That is exactly what passing a Bar exam buys them.

If you skip that step, what you have is fools like yourself who
think they know something about it, but don't.

If I want a contract, or any other legal document, to actually
say what is necessary (as an example of when a lawyer is
useful), I'm certainly going to actually have a lawyer look at
it rather than someone like you!

But, to put that in perspective, even though you understood, and
even though you do have a JD, and even though you did pass a Bar
exam, and even, mind you. though you have practiced communications
law for 40-50 years...

I *still* wouldn't hire you to take care of something involving,
say, _medical_ _law_, or _Indian_ _law_, or _environmental_ _law_.
(Just some random examples because the lawyer I know best does
the first and has a degree in the last two.)

> I can understand everything that my doctor says, and have never
> spent one minute in med school. Can you?

And I don't think anybody should hire you to operate on them either!

But I'll tell you what, if I need a communications lawyer I'm *am*
going to ask you to either do the work or recommend somebody who
can.

Sylvan, however, can do his own lawyering and his own doctoring...

Extremely nice Drake R-8 Shortwave Communications Receiver. Receives from 100 khz to 30 Mhz. Very good condition and hardly used by second owner. Very clean and well kept in a dry and immaculate area. Price is $475.00. I will pack it for the rough treatment it probably will get from UPS and you can pay shipping. I take money orders and cashier's checks. Willing to negotiate some on price but not too much from the market either. Thanks for your interest and viewing my ad. If you have any
questions, feel free to contact me at w9sun@hotmail.com

The workaround is to have a variable oscillator beating against a fixed oscillator. So you have your variable oscillator going from 30 to 42MHz (I just picked those out of my hat), a fixed oscillator running at 30 MHz, and a mixer fed with both oscillators. The output of the mixer will be 0 to 12MHz (plus some other things).

Hi John,

I need to get one of the MAX038EVKIT oscillator evaluation kits shown at the website below but can't check the price nor order it without being a logged-in member, and don't believe that would work out for a one piece hanm radio use purchase. Where/how can I just order a single unit?

1388. FS: MINT AOR AR-8600 Scanner/ Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-18 01:56:30 UTC
From: klarrg@aol.com
Message-ID: <20030717215630.18159.00000111@mb-m15.aol.com>
Source record: 28461

I have an AS-NEW, MINT AOR AR-8600 wideband scanner/receiver available for sale. Bought it and it has BARELY been used (less than 2 HOURS total) and just sits here on my shelf.Rather than just taking up space, I have decided to give it a "new home" where someone will use it to its full capabilities . Unit has the optional DSP installed,as well as the "voice inversion" plug-in (allows decryption of simple voice-inversion encryption..this not available generally for purchase within the USA !) FULL 800 Mhz coverage (NO "BLOCKS" or "missing 800 Mhz range")...cellular-capable.1,000 channels and coverage from 100 khz to 2 Ghz.
Receive Modes: WFM, NFM, SFM, WAM, AM, NAM, USB, LSB, CW
Sensitivity: 100 kHz ~ 1.9 MHz
AM: 3.5 uV (10dB S/N)
1.9 MHz ~ 30 MHz
AM: 2.0 uV (10dB S/N)
30 MHz ~ 470 MHz
AM: 1.0 uV (10dB S/N)
NFM: 0.35 uV (12dB SINAD)
WFM: 1.0 uV (12dB SINAD)
470 MHz ~ 820 MHz
NFM: 0.5 uV (12dB SINAD)
820 MHz ~ 2000 MHz
NFM: 2.5 uV (12dB SINAD)
Selectivity: SSB/NAM 3kHz (-6dB), 9kHz (-60dB)
AM/SFM 9kHz (-6dB), 20kHz (-40dB)
WAM/NFM 12kHz (-6dB), 25kHz (-40dB)
WFM 150kHz (-3dB), 380kHz (-20dB)
Aerial connection: 50 OHM BNC
Audio output: 800mW (8 OHMS) MAX @ 10% THD. Internal speaker, rear chassis 3.5mm socket, front panel 3.5mm socket
Power Consumption: 400mA typical usage, 50mA on standby. 10.8 - 16V d.c..
Negative ground .Dimensions: 155(W) x 57(H) x 195(D) mm excluding projections
Weight: 2kg approx.
Memory channels: 1,000 (20 banks)
Select scan channels: 50
Priority channels: 1
Search banks: 40
PASS channels: 50 per search bank + 50 for VFO search
Scan/Search Rate: 37 increments per second maximum
Item includes power supply , whip antenna, and owner's manual..sorry, no box. Unit is absolutely FLAWLESS and PERFECT both cosmetically and functionally: problem-free and as-new !Pics on AOR website. Payment by MONEY ORDER ONLY: NO EXCEPTIONS ! Price INCLUDES insured , tracked, and WELL-PACKED S/H by USPS.(Please consider this when purchasing).Sorry, NO TRADES or "offers" needed.Price firm.This radio is a superb performer and is only being sold as is

not being used due to other interests and failing health.Please Email me DIRECTLY if interested (do not leave messages on site here as I dso not get here too much these days). Price (DELIVERED AS NOTED) is $ 670.00 THANK YOU for you interest.

Actually, while I had my short private practice, I volunteered at
the County Free Legal Clinic and handled administrative law cases,
primarily landlord-tenant cases. Administrative law is, after all,
administrative law.... <ggg>

But you are right. Anything requiring the type of expertise in the
areas which you cited above requires an expert, and I for one
wouldn't even think about taking such a case.

The best lawyer in medical malpractice was my erstwhile friend and
law school upper-classmate role model who, in addition to being a
top notch lawyer, was the assistant chief of OB-GYN at a major hospital
in suburban San Francisco. Bill died a number of years ago - the doctor
didn't take good enough care of his diabetes. A real tragedy.

Digikey sells a single unit of the chip for $24, but 25 is their
minimum order. You will have to recreate the kit with your own parts.

The data sheet shows most of what you will need.
http://rocky.digikey.com/WebLib/Maxim/Web%20Data/MAX038.pdf

Maxim is also pretty good about giving out samples but you will have
to register.

That says it all right there too! You aren't about to take on
work that you aren't qualified to do.

The somewhat arbitrary reasons for picking those particular
areas were listed just in case you do happen to have some
experience there, because no doubt the "communications" field is
not your one and only ability. As you say, admin is admin.

The lawyer I was referring to doesn't do medical malpractice. She
was general counsel for a tribal health provider, but is currently
the Executive VP. Which makes a great example, as I think *your*
career does too, of what is good about attorneys.

Dunno...I don't have a 2000. You might double check your "keyer" menu,
if it has one. Some have different settings for different types of
keys, bugs, paddles, polarity, etc..The 706 is like this. Maybe it
bumped to a wrong setting? A guy I talk to on 75m at times was having
key problems with a 2000. I don't know if he fixed it or not. MK

A DDS chip like the Analog Devices AD9850 will give you something close to
that. It won't quite go down to 0 MHz, though. You could just switch it off,
of course.

Output suds don't mean squat. "Ya can't work 'em if ya can't hear
'em." Wherein lies the whole problem.

There's a much easier solution!! Have the FCC propose a rule that
communication receivers cannot have receivers with sensitivity lower
than 50 microvolts!

If 60 dB noise levels are real an amplifier won't help me hear the weak
ones! So, simply eliminate the ability to hear the weak ones and we will
all be happy, NO? It's much easier to install a 60 dB pad on a receiver
than pushing amplifiers and Long John Yagis. Hmmm ... ;-)

I'm getting a Yaesu FT-7 (10W)
since I'm a novice and - at the
moment - I can't afford a big
price for a powerful rig...

My antenna is a simple diple
inverted vee... half-wave
(no trap)

I was wondering where I could
get with this QRP transceiver.

Do you suggest to get a 100W
rig instead?

Thanks in advance

Leigh W3NLB wrote:
> 12 MHz is easy. 0 MHz is really difficult.

If you read my original post again or at least the topic, it says 0-12 (not 0, 12) MHz. And that would mean something in the range between 0 and 12. I don't remember when and WHERE i said that i need 0 MHz oscilator. The only one who talks about 0 MHz osc is you.

Big thanks to all other people who gave me good starting points. I was thinking about some CMOS devices, but most of them are square output. This MAX038 baby looks like a dream come true!

I also need to say big thanks to Old DXer. That is exacly what i was looking for !!! A finished project. If anyone knows similar links with finished oscillator projects of this freq. range, you can simply add it in a follow up to this message.

Thank you all again!!

Shoot, propose simultaneously that hams be allowed 50 kilowatts output.
Not that either of these are remedies for the potential problem but
maybe it will help the FCC understand whats going on.

Do a search on QRP, but as I understand, people using 5W or less have
talked to the other side of the world.

100W will make it easier, but using the right antenna and the right
timing will get you there with your current rig.

There's less than 2 "S" units difference in received signal strength between 10 watts and 100 watts. So, if the bands are good and you are getting 5-9 reports with 100 watts, you would be getting 5-7 or 5-8 reports with 10 watts.

However, if the bands are poor and 100 watts is bringing S1 on the other end, then it's another story... FWIW, a good antenna will more than make the difference between 10 and 100 watts... or between 100 and 1000 watts for that matter :>)

And of course, even if such a full range oscillator was not intended
by the original poster, I'd say there often is a big difference between
oscillators in the KHz range and those in the MHz range. Obviously,
the concept of an oscillator doesn't change, but the specific design
does.

You can use resistors and capacitors to set the frequency down near
the audio range, and do your best to avoid coils down there due
to their size, while once you get into radio frequencies, one tends to
use coils for the frequency control element.

Time after time, I see people asking questions about oscillators,
and often they are coming to radio frequencies from an audio background.
So they think in terms of just scaling some favorite audio oscillator
up to radio frequencies, when a simpler solution would be to use an LC
oscillator.

Somewhere in this thread, the 8038's more recent spawn was mentioned.
Obviously, it will work over that full range, but I'm suspicious about
how good it will be at radio frequencies, as I would about any RC
oscillator. It seems a stretch to expect it to work as well at 12MHz
as at 10KHz.

I agree. But on the other hand if you controll this 8038 with another PLL synthesizer, i think the overall performance should be ok from 10 kHz to 12 MHz. I think that is the way how most of "pro stuff" works.

Zero MHz is real easy, just throw a capacitor, transistor,
resistor, tube, or any other electronic component on the bench.
There, an oscillator that oscillators at zero MHz.

Agreed. I guess my point was that if BPL interference becomes a
nationwide problem, _lots_ of people in the US will boost their
transmitter power so that they can be heard - *and* they'll be limited
to working stations who can do likewise.

This leads to a rather nasty non-compromise - you'll be limited to
working a much smaller set of stations (e.g. few or no DX, no QRP),
you'll spend a lot more on equipment, *and* your neighbors (BPL-using
and otherwise) will be much more likely to experience harmful
interference.

Yeah, I found that one... but strangely, I didn't notice any MURS radio dealers when I googled for them.

Seems like a newer service-- maybe there'll be more equipment manufactured for it in the near future.

Thanks, 73...

Jackie

Alright, I am really utilizing these newsgroups for the upcoming hamfest. Just picked up a ts-820s. Looking forward to receiving it and reading the manuals before operation. (Sometimes I wonder if XYL has influenced me with that). I would like to know some testing equipment I will need to get this rig in flight so that I can pick them up at the hamfest. I was reading some posts that talk about tuning the rig and it sounds like fun, albeit treated with respect like all high power electronics, but also more than a simple voltmeter will be needed. Any suggestions?

You don't need a hundred watts - or a thousand - to have fun in Amateur Radio.

I have a few different radios (Yaesu MP & Icom 756 Pro II to name a couple) but because of the area where I live, I seldon run over 10 watts output - and usually just QRP (5 watts or less). I buy good equipment because of the excellent receivers in them, not for the 100 or 200 watts output - which I won't use anyway.

So far, I've gotten my WAS and WAC with under 10 watts output and am slowly creeping up on DXCC. Granted, I could probably have done it 'faster' using a 100 watts, but I've had a truck load of fun - and still get along with my neighbors - who don't hate "that damn ham radio operator" next door for always 'bothering' their TV's, cordless phones and stereos...

Don't worry about the 100 watts - hone your operating skills to make every watt count, and utilize the best possible antenna that you can fit into your yard - you'll have a blast!

QRP operators always run less than 5 watts and every QRP contact is a true prize, because it took SKILL to do it - not just being QRO 'loud'...

Bob

Get a 100 watt radio if possible. More power is not necessary, but 10 watts will not give you an accurate idea of the fun of ham radio.

Get a ten watt radio after you are tired of talking with anyone that you want to.

The subject says what I'm looking for ... must be in excellent-very_good condition, capable of MINIMUM of 30 sq. ft. wind loads in 100 mph wind, within reasonable distance of Allentown, PA, and priced reasonably. Would prefer disassembled on the ground, but will consider taking down a tower that I'm comfortable is structurally sound.

No rusted-out clunkers, please.

73,
Carl - wk3c

For Immediate Release
July 18, 2003

TOUCH TECHNOLOGIES, INC. RELEASES SHEERPOWER 4GL -- BEYOND BASIC
AND IS AVAILABLE TO DOWNLOAD FOR FREE

SAN DIEGO -- SheerPower 4GL -- Beyond BASIC is a full development language, but shares many advantages with popular scripting languages -- such as ultra-fast development speeds and ease of learning the language. SheerPower can be used to write programs of any size, from simple web-enabled programs to vast database applications.

You'll love the price. SheerPower 4GL is 100% free! And, you'll be impressed with your ability to write sexy applications in a snap!

"The SheerPower 4GL website says that SheerPower 4GL is beyond BASIC, and that's quite accurate," said Taran Rampersad, professional software developer and author of "Extreme Programming." "It's as intuitive as BASIC ï¿½ even without the manual. At times I thought I was looking at well-documented BASIC code, or C code, and sometimes both."

Join thousands of others and download SheerPower 4GL today at http://www.sp4gl.com -- the download is 100% free.

Touch Technologies, Inc. (TTI) is a software research and development company based out of San Diego. Founded in 1982, TTI specializes in system utilities and custom application development for the OpenVMS and Windows NT marketplace. With a proven history of unparalleled excellence, TTI also offers high-level consulting and product sales worldwide. TTI's high-end software is currently in use by the majority of today's Fortune 1000 companies. Already holding a number of United States patents, TTI continues to push the limits of technology with its cutting-edge software solutions.

I just helped a ham connect an old Kam to a Yaesu radio. There were a couple of jumpers inside the Kam that set things like PTT polarity and such. Did you check these?

It's not impossible that the keying transistors inside the Kam have been blitzed by some previous connection, use, or owner. They often use a small FET as keying transistors.

Probably shouldn't need any teste equipment unless its broken and
needs to be repaired and tuned. If you want to check the sensitivity
of the receiever, look for an HP 606 signal generator.

At the hamfest, I'd suggest picking up a good SWR/power meter,
dummy load that will handle at least 100 watts (cantenna will work great),
and an antenna switch.

Steve

Texas just had a hurricaine, albeit a fairly normal one.
The station at DPS in Austin was severly limited due to noise in their end.
Why do I point this out?
The noise levels in citites on HF are already so high as to endanger life
and property.
BTW What ever happened to fiber optics?
H.

"Harmful interference" is a specific technical term of art in
communications regulatory law that refers to interruption to a
licensed communications service and places the responsibility to
alleviate the situation on the operation causing the problem.

Your neighbors will experince "unwanted interception" which you
have no obligation to deal with except to make a reasonable amount
of tests to enable the neighbor's repair tech to check the
effectiveness of whatever protective measures they are making to the
affected home electronic/entertainment equipment.

You, OTOH, will receive "harmful interference" from the BPL operation.

Go get 'em, tiger....

The only reason that MURS exists as a non-licensed service is that
E.F. Johnson made so many "Job-Comm" radios (also called "Color-Dot"
radios) and sold them via places like Costco. The radios required a
rather simple low-power-mobile license in the Business Radio
Service, but Joe Sixpack, used to buying and using a CB without a
license, did the same for the JobComms. The FCC in its infinite
wisdom (don't get me started) caved in to E.F. Johnson's and
Motorola's pressure (just as they caved in to Radio Shack's pressure
for the Family Radio Service - FRS) and de-licensed the service
rather than sending out the troops, busting a few unlicensed
operators, and making an example out of them.

Wrong move.

Date: 2003-07-19 01:57:38 UTC
From: kc0atc@qsl.net
Message-ID: <a444e1b1.0307181757.c00da86@posting.google.com>
Source record: 28367

Here are the things I have tried:

1) examined the RIT circuit to make sure it was not
pulling the VFO

2) replaced the zener diode in the VFO power input with
a three-legged voltage regulator. (my schematic says
something like +6.8 but the measured voltage was about
double of that. I believe I ended up putting a 12 volt
regulator in there.)

3) replaced the 10pf capacitor between pin 1 of V-3 and
ground. (this had the most positive effect)

<< Beyond the microphone being high impedance (60K-100K?), and push to talk, I'm not sure what I need to be looking for (or avoiding) when looking through a current catalog of available microphones >>

Paul-

As I recall, the HW/SB-100 series of radios had a reputation for good audio. I tried several hand-held microphones with mine but found the beige or green Heath ceramic microphones to be as good as any. I believe they were a Turner microphone with the Heath logo attached.

The Shure magnetic (controlled reluctance) microphones may have higher output than the ceramic microphones, but I recall receiving reports of "bassy" audio. If you want to try one, look for a Shure 404C. (The 404B is low impedance and would work with the more modern rigs.)

Over the years I have had many more failures of microphone cords at points where they enter the microphone or the connector, than failures of the element. I trust you have checked your cord.

One factor you should keep in mind, is that it is possible to introduce a "ground loop" by connecting the microphone shield to the push-to-talk return wire inside the microphone. To keep extraneous power supply noise from being injected into the microphone amplifier, make sure there is a separate lead for the push-to-talk return and the microphone shield. Even though they may be connected together in the connector, a common wire inside the cord is enough to couple noise to the microphone circuit.

<< I would buy this rig (second hand of course).
I'd like to hear advice, comments about
this rig. >>

Frank-

I have the TS-690S, which is the same as the TS-450 with the Six Meter Band added.

Over all, I like it. There are only a few points that bother me.

The optional CTCSS Tone module (TU-7?) is set with a DIP-Switch, and cannot be programmed to be different for different repeaters in memory. This would be less important with the TS-450 since there are only 4 Ten Meter repeater pairs to worry about! You probably wouldn't consider getting the tone module unless it happens to come with your radio.

On a crowded band some signals appear to have distorted audio, especially if you are listening to foreign broadcast stations. I found that the noise blanker was introducing the distortion, and the problem goes away when I turn it off.

As I recall, my noise blanker is not extremely effective. It works if I encounter a kind of pulsed noise such as ignition noise, but is useless for power line noise.

I'm not aware of any chronic problems with the TS-450/690. Mine has given me no trouble even after being stored in a humid environment for several months.

1450. Amateur Radio Legal Issues List

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-19 03:34:55 UTC
From: n0jaa@aol.compost
Message-ID: <20030718233455.21580.00000154@mb-m07.aol.com>
Source record: 28372

Fellow Amateur Radio Operators,

I have created a new list that deals specifically with legal issues pertaining to our hobby, the Amateur Radio Legal Issues List. The list is for the dissemination and discussion of legal issues (such as PRB-1 and pending legislation in Congress) and other related issues (court battles, etc.) that can affect our hobby.

If you are interested in such a list, please send a blank email to ARLI-subscribe@topica.com.

73's,
Paul Gray, N0JAA
Moderator, Amateur Radio Legal Issues List

1451. Icom IC-756 Pro II Question

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-19 03:36:26 UTC
From: fmmck@aol.com
Message-ID: <20030718233626.14676.00000120@mb-m02.aol.com>
Source record: 28373

I've programed the memories of the IC-756 Pro II, but something isn't working when I try to use one of the memories programmed for repeater use.

When either selecting the memory in memory mode, or transfering its contents to VFO mode, the Split setting is lost, as well as the repeater offset. It appears that to use it with a repeater, you have to manually select Split, holding the button so you get the pre-programmed offset, each time you change memory channels. What makes it worse, is that there are at least two offsets standard on Six Meters in my area, -0.5 and -1.0 MHz.

I can't imagine that Icom would provide such a lame system. Even my old original IC-706 has a more complete memory system for repeaters. Is it possible I'm just doing something wrong?

Thanks for your comments.

1455. Re: Elecraft K2/100 or Kenwood TS-570D(G)?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-19 05:36:08 UTC
From: Pete KE9OA <n.gianakopoulos@worldnet.att.net>
Message-ID: <cN4Sa.62559$3o3.4108405@bgtnsc05-news.ops.worldnet.att.net>
Source record: 28378

They are both good rigs, but I would give the edge to the Kenwood.....I believe that the Elecraft is using a Mini-Circuits Level 7 mixer, which would give an IP3 of right around +14dBm, assuming the 1dB gain compression point is at 0dBm. The Kenwood uses that Quad JFET ring mixer, which gives a slightly better IP3 of +20dBm, and it does give you a general coverage receiver. I have had mine since the late 90s, with no problems. That Elecraft unit does look like a winner, though.

As your post says, at the moment you can't afford a more powerful rig, so enjoy the hobby with the rig you have! On 6M I only run 10W into a home-brew vertical antenna and when conditions are right, it works just as well as some of the more powerful stations.

Sure, I could probably achieve a little more if I ran 100W into a more ideal 6M antenna, but where's the challenge then? At least now I have a sense of achievement in the QSO's I have!

When you get more funds, then increase your set-up, but until then 10W into a good antenna will still work wonders.

All for naught in enough cases to render QRO a complete waste Cecil.
The BPL crud is hammering yer rcvr with an S9 signal. It's the bottom
of the cycle. The VK with his two gallons is 10,000 miles away and
maybe an S6 on a good day. No contact.

160m is below the BPL target spectrum so far. Break out those 160m
condo hamburger deck railing-mounted aerials and beat yer brains out
that way. Choices, choices . . .

Feed the square output to a coil+capacitor in parallel and you'll get
a sine wave. Tune the this 'tank' circuit for harmonics of the
funamental and you can double, triple, quadruple and so on the
original square wave's frequency.

1462. FS on ebay Sangean CC Radio Am/FM/TV/Weather

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-19 13:23:10 UTC
From: "J.Carr" <jc@qwert.com>
Message-ID: <7ghihvod2erfqlkucjba1ofmdkauqhrur0@4ax.com>
Source record: 28385

The radio is in great condition I bought it new not even a year ago and it works great. it comes with the
original box, manual and plug.

The Sangean CC Radio has earned an outstanding reputation as a quality radio specifically designed for talk
radio, news, sports and weather. Twenty years of dreaming, planning and engineering went into the development
of this radio. Audio has been specifically tailored for the human voice. Separate Bass and Treble controls,
combined with the 5 inch speaker, provide a full sound. A mini headphone jack (3.5 mm) is also provided.

This digital radio tunes AM from 520 to 1710 kHz, FM from 87.5 to 108 MHz, VHF TV audio Channels 2 to 13 and
NOAA weather from 162.400 to 162.550 MHz. Separate Bass and Treble combined with the 5 inch speaker provide
excellent fidelity. Fine tuning on the AM band is to 1 kHz. Operation of the radio is as simple as possible.
Five stations can be stored into memory on each band. The CC Radio also has a clock alarm feature with sleep
function.

With the built-in weather band you can listen to the NOAA weather station for current local conditions. A
special Weather Alert feature sounds an alarm to notify you of weather emergency updates. This feature even
works while you are listening to AM or FM. This alarm will even sound at night and wake you up if there is an
alert. In fact there are 3 weather alert functions that you can select (flashing light & no alarm, or NOAA
audio or flashing light & siren). This radio operates with the supplied or AC adapter or may be operated for
up to 250 hours on four D cells (not supplied). All of the radios functions are available via logically
positioned controls and buttons. The LCD is gently backlit at all times when the radio is plugged into AC.
When on batteries you may momentarily illuminate the LCD with the touch of a button.

To Andy KC2SSB:

Hey, how about a posting that deals with smart cops and people who try to moderate legitimate postings? Just what is your definition of spamming?

As far as I am concerned, this gentleman's posting could (should?) have been posted in each and every user group that relates in any fashion to ham radio.

Spam is unsolicited, unwanted advertsing for a profit. Cross-posting that doesn't fit your personal whims is not spam.

Get a Life !!

73 de Jim K4PYT

>I have created a new list that deals specifically with legal issues
>pertaining
>to our hobby

How about one dealing with SPAMMING? I think one post, on rec.radio.amateur would have been sufficient.

Oh, I see. If someone has anything remotely amateur radio related, they should post it on every amateur radio newsgroup so everyone sees it? That's just silly. rec.radio.amateur is for general amateur radio related issues. The mere fact that I'm replying to this (and that I replied to the original post) makes me just as guilty as the original spammer.

Cross posting and off topic posting is a violation of many an ISP's TOS.

The fact is that every post has it's place. If that were not the case, we'd
eliminate every amateur radio newsgroup except for rec.radio.amateur.

>Cross posting and off topic posting is a violation of many an ISP's TOS.

No, it was *NOT* crossposted, and it *should* have been.
Instead the message was multiposted to at least 5 newsgroups
individually.

Multiposting is *never* appropriate. Crossposting _to_
appropriate newsgroups is _always_ appropriate.

>The fact is that every post has it's place. If that were not the case, we'd
>eliminate every amateur radio newsgroup except for rec.radio.amateur.

Some posts have many places, and that is why crossposting is a
facility available on Usenet. And while abuse is relatively
common, that particular instance would have been perhaps
reasonable *if* it had been crossposted instead of multiposted.

And while we discuss Usenet protocols, your signature is

1) too long
2) lacks the appropriate delimiter line, "-- ", between
it and the text of your message.

It seems reasonable that if you are going to rant about the
way someone else posts, you might want to be a little more
correct yourself. :-)

It wasn't cross-posted, Mr. Top Poster. It was multi-posted.
Which required folks with slow dial-up lines -- that cannot
read usenet on a shell account with a real newsreader -- to
download the %$@#^%$ thing multiple times.

This works pretty good at the third and fifth harmonics, but there is
no second or fourth harmonic in a perfect square wave.

Hi all. Im looking for a Icom R-71A or Kenwood R-5000 so Im letting these go to fund it or make a trade. These are both real nice radios in working condition. S.H. from 55992 in Zumbrota, MN

The SX-9. Made in 1935-36. Is as close to perfect cosmeticly as you would hope to find. Restored front panel. The cabinet is the original wrinkle finish that has been cleaned and clear coated. Receives on all bands except Band 5 20mhz on up is very weak. A little tweaking may bring it alive. It needs the 6F5 tube for the 1st Audio. Somebody put a 6K7 in? This should improve the performance of the set. I don't have one in stock or I would have replaced it. The AVC circuit seems funny. Havent had time to check into it. May need a new tube? All caps have been replaced. The radio is as nice as they get. Just needs a tuneup and minor work. $300 firm. + S.H.

http://home.jps.net/~jonnysocko/sx9b.jpg
http://home.jps.net/~jonnysocko/sx9c.jpg
http://home.jps.net/~jonnysocko/sx9d.jpg
http://home.jps.net/~jonnysocko/sx9e.jpg
http://home.jps.net/~jonnysocko/sx9f.jpg
http://home.jps.net/~jonnysocko/sx9g.jpg

The SX-23. Made in 1939. Is very nice cosmeticly and works very well. Great cabinet and original lettering. It has some scratches that are not very noticable. I restored the finish and repainted the dial. It is a real beautiful radio. It was modified at one point in its life by the evidence of two extra tube socket holes. I had to rewire the power supply and audio section. It has a replacement filter choke as seen in the pics. I used a differant audio output transformer. The original was gone Easily replaced if you want to go back to the original 500/5000ohm out. It could use an h logo cover on the power trans to spiff it up. I replaced all the caps and the hard to get at ones in the RF deck and several resistors. I installed new dial string on the main dial,band indicator and A.N.L. switch. It needs a meter that swings in the opposite direction. The one in it is all I had. It works. Just a left shoe on a right foot. The radio will probably need an alinement but its very sensitive and WWV was right on 10mhz. It will need the band change and selectivity knob(Like on an SX-28). The ones on it are Hallis but there not right.The earphone jack will need to be wired into the circuit. Its all there I just got lazy. By the way its a very nice sounding radio. It will need the original 455khz Xtal filter that plugs in the socket. I have the main dial plastic for it but its warped. Its the same as the S-20R or SX-25 etc.. Real easy to duplicate. i paid $200 for the radio and did a lot of work on it so I was hoping to get at least $265 +S.H. to cover the parts and work Ive done.

A perfectly symmetrical square wave doesn't contain any even harmonics. For best results when using this technique to generate even harmonics, the square wave needs to have a longer "on" period than "off" period or vice-versa.

Mine works like a champ....all you have to do is the standard MARS/CAP mod to open the rig up across the whole operating range (you can find the mod in lots of places on the net). I get full rated output into a dummy load....don't forget to measure your peak power out and account for any gain afforded by your antenna to maintain the 50W effective radiated power (ERP) rule.

> mixer, which gives a slightly better IP3 of +20dBm

Elecraft IP3 is +21.6 dBm preamp off and +6.9 preamp on.... The best Kenwood data is available on is the TS-870 and it's IPS is +16 dBm preamp off and +4 with preamp on.....

I personally don't think the TS-570 comes close to the TS-870 or the K2. The K2 has, according to tests, one of the finest receivers in amateur use today. Comparisons are available on the ARRL Tech web pages and on the Elecraft web page.

IMO you are being led astray. I don't see why the emphasis on frequency multiplication. It is fairly simple to make an LC oscillator cover a 2 to 1 frequency range, or even 3 to 1. That could mean 4 to 12 MHz in one tuning range and 1.3 to 4 in another. The problem is lower frequencies. These days it is hard to find a large-enough variable capacitor for operation down in the few-hundreds of kilohertz range, let alone lower.

I know of only two ways that will cover the whole zero to 12 MHz range without bandswitching or switched filters.

One is the direct digital synthesizer DDS. Single chip DDS units are available [Analog Devices Inc] fairly cheaply, but they are tiny and require a computer or equivalent to control them. You get "perfect" frequency accuracy and stability and a sine-wave output.

The other is a beat-frequency method with two oscillators operating considerably above 12 MHz. One crystal controlled, the other knob controlled tuning from the crystal frequency to 12 MHz higher. Feed them into a double-balanced mixer (MiniCircuits) followed by a low-pass filter that passes 0 to 12 MHz, and strongly rejects the crystal osc frequency and all higher. One knob, no switching, no computer needed for control - but also much poorer frequency accuracy and stability.

Good point, John. But fortunately, I've never generated a *perfect*
square wave! :-) In practice, it's probably more accurate to say that
the even harmonics are well down on the odds. Blame it on dv/dt.

Check out 'RF Circuit Design', by Chris Bowick. It's an excellent read
on the subject of RF in general.

Most due to crappy power lines and insulators. Now add BPL with wideband
digital signals and you have a notion of how it will sound.

I have been working with Alabama power for almost 5 years now. Including
the ARRL and the FCC on their ass. And its still not fixed. Wait till
BPL is deployed.

This guy knows nothing. He is a no-code Tech with ZERO hf experience.

I on the otherhand have had 43 years Amateur and Military HF radio experience.

10 watts of output power on the higher HF bands. I.E. above 20 meters into a reasonable antenna will work the world...when the sunspots are in a good mood. Unfortunatly we are now going down the cycle. So don't expect much above 20 meters to be reliable.

20 meters is the hands down all around DX band there is. Daytime will give you stateside commo. Follow the sun. Bearing in mind that summertime is really tough, no matter if its ten or 100 watts.

Forty is a good band....but again summertime problems. Forget 80 and 160 at that level without some serious antennas.

Ten megs (30 meters) is a good all around band. But its CW/Digital only and the FT-7 dont do that one.

So your real choice is 20 meters. Put up a good dipole at least 33 feet high. Or a vertical about 15 feet minimum above ground. Follow the sun and do it. DX is there all the time. Time of day and sunspot cycle determins what is happening.

<snip beat freq method>

If Tom - or anyone else - wants to do this the DDS way, there's a
0-10MHz function generator project in Australian Silicon Chip magazine,
May 2003 edition. It's a stand-alone box and delivers the following
specs:

Waveform Generation: 32-bit DDS, 10-bit DAC
Distortion: <1% @ 1kHz
Frequency Range: 1Hz to 10MHz in 1Hz steps
Frequency Display: "Sliding Window" 7-digit
(EEPROM frequency retention)
User Input: Three push buttons
Sinewave Output: 0-5V p-p adjustable, 50 ohm
Squarewave output: CMOS/TTL compatible, 50% duty cycle
Output Connectors: RCA (Cinch)

Power: 9VAC 1--mA plugpack

This project is designed to replace the earlier DDS generator described in Electronics Australia magazine August 1996. Copies of the article, or back-issues of Silicon Chip, can be ordered from http://www.siliconchip.com.au and they also have a list of kit sources online.

>By what standard? Yours?

Do you know anything at all about Usenet message formating?

"If you include a signature keep it short. Rule of thumb
is no longer than 4 lines."
rfc1855 "Netiquette Guidelines"

"signature
The three or four line message at the bottom of a piece of email
or a Usenet article which identifies the sender. Large signatures
(over five lines) are generally frowned upon. See also:
Electronic Mail, Usenet."
rfc1983 "Internet Users' Glossary"

"4.3. Usenet Signature Convention
There is a convention in Usenet news of using "-- " as the
separator line between the body and the signature of a
message."
rfc2646 "The Text/Plain Format Parameter"

Here is a more detailed explanation:

http://www.uwasa.fi/~ts/http/signatur.html

You can go to google and find *thousands* of web sites
which explain signatures in detail.

>=-

Umm.. 1983? I think that's a little outdated. Really should be updated after 20 years. That goes back to the days of 2400 baud modem when bandwidth was a concern.

>You can go to google and find *thousands* of web sites

Ladies and gentlemen:

Available: ICOM IC-228A 2-Meter Transceiver (Radio Only)

Situation: This radio has no RF working inside, RX or TX. ICOM advises that the radio needs a coil and a diode, LW30 and RD30E-B2, respectively, and that ICOM no longer has these two parts in the supply pipeline. The radio is otherwise complete, intact and in good physical condition.

Consequence: This radio is yours for the asking.

Price: Gratis (Recipient will pay shipping if shipping is necessary).

Regards -

BOB CARTER W5BTC dc2light@radix.net H 301-884-4480

1508. The myth that BPL is a solution for rural broadband

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-20 15:43:52 UTC
From: robkemp90210@hotmail.com
Message-ID: <6114e4af.0307200743.77d5e419@posting.google.com>
Source record: 28332
Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.shortwave

The claim that BPL is good for rural deployment is yet another myth propagated by the BPL lobbyists. In essence it is bait and switch. The BPL strategy is to get the FCC to allow the high levels of interference / pollution as the FCC is focused on getting broadband to rural communities that don't have it.

In reality, if the BPL lobbyists succeed, they will immediately focus on the wealthy suburban markets that are profitable (and already have cable and DSL) and ignore the rural areas.

DSL can work out to about ~ 16,000 feet from the central office. BPL can only go 2,000 feet from the BPL equivalent of a DSLAM, then BPL needs an expensive repeater installed by a linesman trained to work with 11,000 volt cables. So for a 16,000 foot run 8 BPL repeaters are needed.
At the customer's pole transformer a bridge will need to be installed to couple the signals from the 11,000 volt line to the 110 volt line (imagine what would happen if the bridge failed and your sockets had 11,000 volts!!).

However the math is worked, there is no way they can implement this vast array of expensive equipment in rural areas with any hope of meeting the alleged pricing.

The existing DSL broadband technology is proven and could be provided to almost everyone who has a phone, the barriers are political not technical. The solution to universal broadband lies in ensuring the phone companies serve all of their customers equally. BPL is a broken and polluting technology that is a pure distraction to the objective of universal broadband.

They are numbered sequentially, Andy. RFC1983 is dated August 1996. The
last one on the list, as of 201513Z July 2003, is RFC3573.

I have a few nice rigs I come across at hamfests and they always have missing screws because the threads are stripped. I was wondering if anyone had any success in filling the holes with something. I'm have had limited success with copper braid in the hole, but it's not permanent, and I hate the thought of fine copper pieces floating around in the equipment. I was more thinking of maybe something to fill the hold and then re-tap it. I could re-tap the hold bigger but then it would look out of place and have to re-tap them all. Mostly this is a cabinet where on piece of metal overlaps the other and the back piece is taped.

Anyone have any words of wisdom?

Joe,

Go to a hardware store and ask. I can't remember the same, but there is a commercial product, usually hanging on a peg at the end of an isle, which looks like some small strips of aluminum foil. You push one, or more, into the hole, insert the screw, and tear off the excess. It molds itself to the hole and does not easily fall out, though you can remove it if you want. I have used it for what you want, and at least for me it worked fine. Works on much larger screws as well.

Ed:

You will discover that the information is held very close, for obvious reasons. But, anyone with good modeling software can derive equivalent results, as the characteristics of electric utility lines are well documented. As a long time power line RFI locator*, I can tell you that two things happen which are not common knowledge. First, at each insulator, there is a large enough impedance bump to cause several dB of loss due to reflection. Then, the attenuation of wide spaced open wire lines is pretty good, until you start measuring line lengths in miles instead of feet.

* See: http://www.arrl.org/tis/info/HTML/power_line_handbook/

I have several friends in the "corn & wheat belt" of
Iowa and Nebraska. (I broker farm equipment)
All of them have internet access, either via traditonal
dialup or some who have DSL via telco fibre taps
in the trunks that run btwn the cities. Wireless BPL
would not be a seller. (one enterprising customer
in Ohio I know has set up his own wireless LAN that
covers a good chunk of his 4000 acre farm. He can
surf the web on his laptop while inside the cab of
his aftermarket A/C equipped John Deere 9000
Series Combine

> In reality, if the BPL lobbyists succeed, they will immediately focus

Very true! Suburban customer and the VERY lucrative
College Campus market(s) are the real target
of this technology.

> The existing DSL broadband technology is proven and could be provided

The problem is there is one person at the FCC who
has known connections and investments into numerous
telecom corporations. His name is Michael Powell.
Get the big picture? Powell is to the FCC, what Murdoc
is to mass media.....

For an example of what I mean, go to the link below for more info :

I read much of the info you pointed to and have bookmarked it. It may be useful to me in the future if I have power line RFI issues.

I did not find any reference that was helpful on BPL losses over power lines, or any loss specs at all. However, will take your posting as fact for now. In any case, I am hopful that this proposal will eventually get shot down, by other HF spectrum users, if not the ham community.

<< > Anyone have any words of wisdom?

The word of wisdom here is HeliCoil.
>>

Joel & Max-

I was about to reply with Max's suggestion when I read his. I did a search on HeliCoil and came up with:

http://www.ersco-mi.com/helicoil1.html

http://www.emhart.com/products/helicoil.html

and

http://www.ezlok.com/

Of the first two, one may be the manufacturer and the other a distributor, but that isn't clear. The third appears to be a similar competitor. I would start by checking with a local hardware store to see if they have heard of HeliCoil or EZ Lok.

These require the original threads to be in a somewhat thick piece of metal. There is also a system for sheet metal I've seen used in Hewlett Packard and other equipment. Something like a thick washer is threaded and pressed into a hole in the sheet metal. I don't know if this is available for the repair industry, or if it is custom made by the companies that use it.

>with 11,000 volt cables.

All utility repair maintainers ("linesmen") must be trained and
qualified to work with primary voltages (11,000 V in your example).
There are special tools ("hot sticks") which they use daily to work
such open lines live, and they have no hesitation to pull the fuses
and work them "cold" if need be. Even after they pull the fuses and
ground the lines, they still use the "hot sticks" which are designed
specifically for the hardware in use.

Transmission voltages (34 KV and up) are something else. Those are
never worked hot.

(As the Portland General Electric channel on my scanner chatters in
the background.)

But you are 100% on point as to what is needed and what the
utilities are liable to do.

I use a pop-rivet type tool that installs a threaded insert into the
aluminum or sheet steel housing. I don't know the brand of insert that I
use but there is a similar type shown here at
http://www.rivetsplus.com/manufacture/avdel/dl_insert.asp

The HeliCoil works really great for stripped threaded inserts in block
aluminum or steel but don't seem to do much good at all when it is just a
casing screw in a sheet metal box that is stripped. Often when I come
across one stripped hole I will drill them all out and replace the entire
set. Hope this helps.

In a hardware store's nuts & bolts section you'll probably find these in the slide-out drawers. I know what you're thinking about but can't think of what they're really called. Those drawers are nice because they have pictures on them. (advanced hardware stores actually hotglue one onto the front of the drawer.)

I doubt helicoils would work on sheet steel either.

RK,

Don't know if this is really about Shortwave; may be the interference
that it can cause to Shortwave reception.

But if you have your facts right then BPL would do little for our
rural communities but would do some major harm to radio reception in
Urban Areas.

Wow, what good suggestions. I think I saw a pop-rivet like your suggesting. That would be the perfect answer if it's not to thick on the face side as the two pieces of metal fit flush. I do have room on the backside for a short pop rivet. Hmm, I wonder where I can find these guys. I never really looked at the pop-rivet section of Home Deport or Lowes. I suppose it's just me. But after I fix up these old radios and get them working like new, I hate to have stripped out screws. <shrug>

While I would love a broadband connection out here in the woods. I'm not willing to sacrifice the spectrum. I'll just stick with my StarBand satellite Internet.

Looking at the web site, it looks like the smallest is 6/32 I was looking for 8mm as that's what most of these radios are. I could use 6/32, but in that case, I would just re-tap it to 6/32 and be done with it. But a great suggestion, and I'll keep looking at the other suggestions.

For Sale:

Yaesu FT-817 - box & manual - like new.

Tokyo Hy-Power "QRP" AMP HB-50L - like new, box and manual, mint.
This is the 5 watt model, 5 watts in gives you 50 watts out. Works
great.

LDG Auto-tuner "QRP" Z-11 - Excellent condition.

LDG 4:1 Balun - currently attached to the Pelican 1420 case for
longwire operation.

SupperAntenna "MP-1" portable antenna system - comes with TWO COIL
SECTIONS! Yes, I have two of them...the heart of the antenna. Just
add a base rod and a whip and you will have two $150 antennas! One is
used and the other is brand new, not a scratch on it.

Rigblaster "NOMIC" - for PSK31

Mini Keyer

Pelican Case - Model 1420, Black.

$975.00 Shipped Cont. US.

Please follow the following link to view my webpage with pictures of
this setup.

I've used HeliCoils in engine blocks, but is there a 4-40 Heli ??

Getting real, the thickness of the threaded part (sheet metal) may
only be 1/16 inch....three turns at the most.

Lock-Tite may be the best answer.

Oh Goody. Turn that info over to the FCC Inspector General and the U S Attorney General, because it is a violation of Federal law to be so involved and/or he is perjuring himself on the required annual Financial Disclosure form.

Because we had to sell my then-wife's AT&T stock when I joined the FCC as a field engineer, I have no sympathy for someone else who tries to slide by without such divestiture....if in fact it is happening.

You do have solid proof of that, right?

I have a video of a crew working on a 'hot' transmission line of several hundred thousand volts, using a helicopter. They don't shut down the big lines unless it's absolutely necessary.

Maybe two dozen hams in Star Valley. 10K-foot mtns on east side;
9K-foot mtns on west. Virtually no HF workings here. Everybody on 2M
with repeater at north end at 8900-feet linked westward to Oregon and
southward to Henderson, Nevada through Snowbird Links. Repeater at
south end is 1,200-feet AGL for valley traffic. Another repeater in
Jackson Hole for traffic there with some of us able to access it.
Everyone else on the Internet for 'Round-the-world communications!'

Drat. My DER-325 was scrapped out in Hong Kong. Would have loved to
have the GRC radio system on board. Maybe the fore and aft masts, too.
16 dipole elements on forward radar mast operating on 220 MHz with 300+
mile range would have been cat's meow for long distance work and on a
measly 300 kilowatts!!

voltages up to at least 765kv are worked hot in the states. there is a
helicopter company that specializes in this kind of work so that those lines
don't have to be shut down to do repairs. lower voltages like 115kv and
69kv are worked hot with fiberglass 'hot sticks'.

4-40 seems to be the smallest, although some charts show 2-56.

Three turns is a bare minimum.

These are called PEM nuts (from Pennsylvania Engineering and
Manufacturing, the originator). This is a high-quality fastener that
is used universally for providing machine-screw threads in sheet
metal. Many different forms available.

They work very well. The hole should be accurately drilled to size...
this is important. And you should use the correct fastener for the
thickness of the sheet metal involved.

It takes a fair amount of force to install one, as it forms the
aluminum into the recesses of the fastener under pressure. But once
installed properly, the fastener is permanent and very reliable.

>Remember the UPS-220-222 MHz fiasco? FCC granted UPS that frequency
>range THEN UPS found it to be useless for their purposes.

Amateur Urban Myth Number 1. UPS never applied for, and were
never granted, a license to operate a system on 220 MHz. The push
to "develop" that band was made by "Tio Carlos" Roberts, an ex-FCC
"fair haired boy" engineer who had stayed with the agency long
enough to talk them into giving him a grant to pursue a Master's
degree in Communications Engineering on a non-competitive basis - I
would have loved to get considered for that grant but I was not of
Hispanic heritage - and then dickered around as a rather ineffective
Bureau Chief until "the industry" waved money in front of him.

The ACSB equipment that he was hawking never worked, and UPS got
tired to waiting and went to The Big Emm and bought the existing
800 MHz system.

>We still didn't get it back.

By that time, other nation-wide entities (including the American Red
Cross) had applied for and were granted licenses for more conventional
(FM) networks nationwide.

The ARRL did appeal the takeaway through the courts but the courts
did not reverse the Commission.

>Hams in Calif had set up the Condor net covering
>the state on 222 - all gone!

222 and above is still there.

As is the Condor Connection. The repeaters are all in the 222-225
band. My understanding is that the inter-repeater links are all on
440 these days. One or two of the repeaters are down at the moment,
but most of them are up and working.

Most of the 222-225 repeater frequency allocations here in the SF Bay
area seem to be occupied by active repeaters. Some of them are
standalone, but at least half seem to be crosslinked to local 2-meter
repeaters.

Source record: 28287

Hi,

because I need to change the PA transistor at my FDK 750
I have to adjust the ALC and APC.
I have a electronic copy of the service manual
(You can find it at
http://www.geocities.com/gw0tqm/fdk/p014.gif)
but I don't understand how to adjust the APC
and ALC.
Maybe there is an error in the description of
the "A.P.C adjustment".
Should I really turn RV4 to change the APC?
(because there is no DIP Point at all when
changing RV4) Is RV3 meant?

And where should I measure the ALC voltage?

Thank you
Martin Laabs (DM1EF)

For Sale a Kenwood TH-G71A.
I purchased this HT from HRO last September "02.
It's in mint condition. It comes with the following:
TH-G71A The HT - paid $239.95 + Tax
BC-19 Rapid Charger - paid $59.95 + Tax
BT-11 4 AA battery case - paid $17.95
have all the boxes, manuals etc.
I would like to get $250 for everything!
I can take pictures if you need to see it
but I've used it about 10 times and charged
the battery about twice.
I'd like to send it U.S. mail COD if possible
as I live close to a Post office.

Hi, Everybody,

I have been shocked to learn recently how expensive shipping can be. What do you guys all do when you have to ship equipment?

I am selling a Drake station and took the AC-4 / MS-4 to the local Mailboxes, Etc. store to get an idea of how much it would cost. They told me that UPS Ground was $36.86 to ship from California to Michigan. And that was not including the packing! And there would be two more boxes to ship (for the receiver and transmitter)!

I had to give my buyer that sad news that, at these prices, I can't afford to ship!

What is the best practice to follow when needing to ship equipment across the country?

Thanks.

Regards,

Al W6LX

I bite the bullet and consider it part of the cost. I live in Zone 8
from most locations and the rates have skyrocketed in the past few years
compared to more local zones..

I have heard that the "Mailboxes" places mark up the UPS rates by about
20-25%. You can check the REAL rates online at their website. I hope
you didn't ask about the cost of packing or you'd just now be getting up
off the floor!

Pack it yourself and carry it to the Post Office or UPS.

What Bill said... I have found that going to Mailboxes, Etc., or anything like them, will cost right at twice what packing it yourself and driving to the post office costs. I live in Korea, and I have to use USPS to send or receive all my parcels. I have sent items much heavier than what you planned to ship for only about $35 to the east coast (APO's are charged from San Francisco). Pack it, weigh it, and check online at www.usps.com or www.ups.com for actual shipping costs.

Yes, most colleges (if not all) already have T-1 or T-3 lines which are
networked through every building. I seriously doubt they would ever
consider BPL technology because it would be a net loss of something on the
order of 70% of their current bandwidth. Each student has more or less the
equivalent of something like 5% of the total bandwidth available via BPL..
(these are only guesstimates, but they are based upon figures I have seen
posted about BPL's bandwidth, it starts getting down to dial-up levels by
the time it's been distributed to 2,000 users..)

I like USPS where possible but the items you mention go better by UPS.

Shipping them together should save some. I was surprised today when I shipped a rather large box, weight 21 lbs., from Alabama to Arkansas for only $12.49. That was from a UPS/Mailboxes. The USPS cost was like $19.00 for the same. They said they typically run about 10% higher than the UPS terminal counter prices. The cheapest way to ship is from someplace that has a UPS account with daily pickup service. A friend, maybe.

Still, shipping ain't cheap.

Digi-Key seems to have at least a few Toko models which might work for
you. Check Digi-Key part numbers TK1301-ND and TK1304-ND through
TK1306-ND (Toko 10EZC type, 455 kHz), and TK1237-ND through TK1240-ND
(10EZCH type, 10.7 MHz).

From: mustang <adrian@ratherbeflying.net>
Message-ID: <3F1C81D3.6020001@ratherbeflying.net>
Source record: 28152

I have bought a s/h Alinco DX70TH and found that it stops receiving
below 1.6 MHz. Is there a cause or cure? The seller has offered to have
it rectified, but the freight costs will be high from here.
Any tips would be appreciated.
Thanks,
Adrian.

>Still, shipping ain't cheap.

Shipping heavy items used to be cheapest by Greyhound Package
Services, but the drawback was that you had to take it to the bus
depot when you were the shipper and pick it up there when you were
the recipient. I don't even know if they do that any more.

Just this afternoon I shipped something from the UPS Store, the new
name for Mailboxes. Shipping was $12 and packing was $4. The "do
it yourself" cost would have been about $9 for shipping and $3 for
the right size box and packing (I've packed many a shipment so I do
know how to do it properly). The drawback is that I would have had
to drive about 15 miles to the UPS Service Center (it's 95 degrees
out today in the blazing sun and I would have to drive into the sun
to get there) versus the UPS Store about three minutes away locally.
It was worth the extra few bucks.

Don't ask why the FedEx truck drove up to the UPS Store just as I
was leaving.....

dave thanks for the quick reply. Any reason why they are so expensive? I thought i saw some rf coils on the DC Electronics website for only about 50 cents each. Are these manufactured that much better?

thanks,

jeff

Forget UPS and their so-called "shipping agents." They've made it quite clear their not interested in residential business. Then Mailboxes tacks on 20% more? What are we wearing, "KICK ME" signs on out backs?
Look into Federal Express GROUND. Its cheaper than UPS AND the post office Parcel Post,packages are treated better, insurance is included and you'll have the item in 3 days.

I pack it myself and take it to the local FedEx ground depot. FedEx Ground
is usually cheaper than UPS for large objects.

>I am selling a Drake station and took the AC-4 / MS-4 to the local

Right, but they are also tacking a substantial fee on top of the UPS fee.
You'll find if you take it to the UPS depot yourself, it'll cost half
that. FedEx will be still cheaper. The pack and ship places are NOT
cost-effective if you do a lot of shipping.

The world has *CHANGED*.
FED EXPRESS "ground" is usually the least expensive way
UPS is considerably higher.
USPS "PARCEL POST" is even _more_ expensive, in general.

For 'medium heavy' stuff, if it's going between 'lucky' destinations,
AMTRAK carries station-to-station packages at rather reasonable rates.
They price in 50lb increments, but multiple boxes to the same destination
are priced on the _total_ weight.

Twenty percent? *HAH*!!! I've had MBE qoute a price that was in excess of
THREE TIMES what the on-line calculator at www.ups.com qouted. Admittedly,
it was a small, _light_ package,

> What are we wearing, "KICK ME" signs on out backs?

MBE is in the business of selling "convenience" -- to those who "don't know
any better." At a 'what the market will bear' price-point.

UPS recently _bought_ MBE -- look for the name "THE UPS STORE".

Remember MBE is a *franchise* operation. Costs circa $200,000 to open one.

Poor franchise sucker has to make his money _somewhere_. 'Surcharging' on
3rd-party services is one way.

They're a *FRANCHISE*. And handle FED EX shipments as well.

FED EXP 'ground' is usually cheaper than UPS ground, these days.

And FED EX _will_ pick-up.

Ed,

In reply to your question on the technical requirements, (apologies in advance for the verbose response but would like to ensure that the implementation difference between European PLC/PLT and our BPL is understood by everyone).

In Europe BPL (PLC/PLT) is connected to the 220V (European voltage) at the transformer that feeds 100~200 homes. Typically backhaul from the transformer is a dedicated data line. European power lines are underground and the emission limits are lower (NB30) but there are still major interference problems. At NB30 emission limits PLC/PLT is good for about 900 feet.

Here in the U.S. our power system architecture is different with a transformer for 4~6 homes in the suburbs, in rural areas many homes will have individual transformers as the houses are far apart.

BPL is transmitted down (and emitted from) the 11KV medium voltage lines that go to the house transformers. 11KV lines have significant attenuation (and radiation) at HF.

The repeater issue has been "swept under carpet" as they are expensive and need a truck roll to install. The BPL lobby's focus has been to persuade the world that every socket magically becomes an Internet connection.

For details on a typical BPL repeater check;
http://www.amperion.com/products.asp

There are no details on specific repeater distances at the Amperion site, just a vague comment about data rates and latency. Latency will cause problems for VoIP and gamers (the ping numbers will be bad).

It is clear from the Amperion information that these repeaters are complex as they decode the data. Presume that power is somehow picked off the 11KV line.

The source for the 2,000 feet is here;
http://www2.arrl.org/news/features/2003/06/01/1/
"According to industry sources, data rates of up to 20 MB/s are possible for distances of up to 2,000 feet, and of up to 3 MB/s for distances of up to 4,000 feet."

The ARRL comments are for raw data rates under very ideal conditions, actual download speed shared by all customers will be about 35% of the raw data rate. The BPL systems both in Europe and the U.S. have symmetrical upload/download speeds which is puzzling, as would expect users to care more about download speeds.

If the FCC raises the emission limits, then the repeater distance will be greater. Suspect if they don't, the BPL operators will still turn up the power anyway and wait for complaints

HeliCoil?

Too much work and $$. A Heilcoil inserted into such a small hole
would likely not hold well anyway. Why not just use a slightly larger
screw? Depending on the application (i.e. sheet metal case) this
works great.

Hope this helps.....

Homac

How about sending it by bus?

Most bus companies have parcel services that take packages up to 50 pounds or so and will get them to the destination faster than UPS Ground or FedEx Ground or USPS, for about the same rate I think (tho' I've never compared them)

We do that here in Montana for parts that one service tech needs and another has. It's not cost-effective to drive 100+ miles to deliver a part, so we put it on the bus. If you get to the station early enough, it will arrive at the destination in only a few hours. With all of the other operations it won't get there until the next day at the earliest.

Pack it yourself. Double boxed with peanuts in between.
Take it to FedeX and ship it third day. FedeX is much
more gentle and it won't get lost. You will be shocked
at the low prices for third day.

BTW: I was in the business. I owned one of those stores.

DON'T ship an AC-4 still installed in an MS-4!
You will get one badly bent MS-4.
Be sure you seperate them.

UPS will come to a place of business to pick up an item. Call them the
day before and they will give you the info. Very convenient around the
holidays.

Funny you should mention shipping Drake 4-Line gear...
I just shipped a C-Line station (TX, RX, PS, SPKR) to
a buddy in Pennsylvania from my home in north Texas.
He requested that I use the US Postal Service rather
than UPS or others. The cost, including insurance
and delivery confirmation, was about $18.00 per piece.
UPS and FedEx Ground would have been cheaper, but my
friend was paying the shipping costs, so he got to
pick the shipper.

I do my own packing using recycled boxes, bubble wrap,
etc, which I scrounge at work. I refuse to pay some
clerk at MBE or other vendor a lot of money to do what
I can do in 10 minutes at home.

I'm not offering any opinions on which shipper is the
best or fastest or most careful or anything else. I
am just sharing my recent experience (last week).

As for the cost, yep, it is getting high. I always
have the buyer pay the cost, and the buyer always gets
to choose their preferred method of shipment. If the
buyer doesn't want to pay the shipping, I find another
buyer. Simple as that.

Watched an interesting program while ago on tlc or discovery about
electrocutions, power line workers in special helicopter were checking
lines
for bad insulators/leaks and were working on one section when the linesman
got electrocuted. Even with all safety equipment in use, he was knocked
out,
lost several teeth but survived.

Even with the power off these hv lines, there is some level of residual
power there
perhaps from static, the program did not get into details.

I would like to see how those cell antenna are installed on top of these
power towers.
Guess they use special crane to do it.

It would seem that the use of repeaters on the HV lines would require the
power line to be broken into isolated sections (RF-wise) where the repeaters
are located, with the 60Hz bypassed around the repeater. This can't be good
for reliable electric service.

if they are not properly grounded they can build up a static charge just from wind or passing clouds(thunderstorms or clouds that are building a charge separation even though they haven't actually caused lightning yet). they can also get charged by induced voltages from nearby energized lines, where the line you are working on runs parallel to another energized line it acts like a huge one turn transformer and if not grounded it can build up quite a high voltage.

>
> I would like to see how those cell antenna are installed on top of these
> power towers.
> Guess they use special crane to do it.

crane, helicopter, carry it up on your back, whatever it takes they get them up there... providing grounding and isolation at the base of the tower is the bigger problem. the control shack they connect to requires both AC power and usually a connection to a land based phone network. both of these need extra protection because if the hv line flashes over an insulator due to a fault or lightning the voltage at the base of the structure can get quite high, this can flash back over to the low voltage line and phone lines and get back into those systems. phone lines are easiest to protect by using fiber optics but power is another problem. One utility engineer i talked to at a lightning protection meeting described how a fault like that got into the distribution lines and blew the service drops off several houses down the road causing all sorts of collateral damage.

Fedex ground is available you have an account with fedex.

Also when you ship using one of these package stores, the store
is the shipper, not you, so if there is a claim the package store has
to get involved to file the claim.

Have been using US Post Office for small stuff, under 10 lbs, fast and no worries,

the priority mail now claims two days (no guarantee, but that is ok !) now instead of
the three days in the past.

Mailed package from Charlotte NC to LA on Friday and they got it Tuesday afternoon.

Now that is fast !

The power companies have already been using power line carrier repeaters
for many, many years. The repeaters are the bypass, not vice versa.

For larger items this is true.

USPS is cheaper for small items, BUT the USPS insurance is much more expensive. So sending a couple tubes Priority Mail can be a lot cheaper than UPS or Fed Ex but if you need insurance, we go back to Fed Ex being cheaper.

The cheapest way to ship anything is:

First you must box it yourself.
Second FEDX ground if you have a depot in you town.
Third USPO ground
Four UPS ground

If you must ship it Priority the USPO is the only way I go.

Yes the buyer always pays the shipping unless you have it figured into
the cost in the start.

Yes talk the Power Supply out of the MS-4 or the buyer won't be to happy.

Also double box the item and pack it real tight so it won't mover around
in the box.

Yes it is more work to double box but is almost better than buying the
insurance.

I never buy insurance unless the buyer want it.

I have never filed a claim on over 500 items shipped.

Last never go to the rip off places to have them pack and distroy you
item and end up paying through the nose for it.
Happy shipping

1613. FS Nice Drake TR7 and PS7

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-22 20:23:23 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <%2hTa.59284$R92.54998@news2.central.cox.net>
Source record: 28187

I have for sale a nice Drake TR7 Transceiver and PS7 Power Supply. The TR-7 is a late one, SN 9283. It is loaded with all filters including the wide and narrow SSB filters, the CW filter and the hard to find AM filter. It has the non sticky cabinet which is very clean. This transceiver has been completely gone through in March of 2002 by John Kriner, The Man Electronics. He installed the latest mods including the Static Discharge mod and the mod that enables transmit on all bands including the WARC and 60 meter frequencies. He installed new bluing for the meter and PTO and other parts necessary to bring the rig up to 100%. He also performed a complete alignment. Documentation of this work in included. The PS7 works great. It has a small light installed on the front panel that glows red when the PS is on. Fans are installed on both the radio and the ps. This transceiver is equivalent to a TR7A except for the noise blanker. Original Manuals are included. Price is $675. Thanks, Charlie Hugg, K5MBX

1614. FS: Kenwood TH-G71 Plus all sorts accessories

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-22 20:39:39 UTC
From: Tom Seabury <tseabury@value.net>
Message-ID: <3F1DA477.3040006@value.net>
Source record: 28188

For Sale a Kenwood TH-G71A.
I purchased this HT from HRO last September "02.
It's in mint condition. It comes with the following:
TH-G71A The HT - paid $239.95 + Tax
BC-19 Rapid Charger - paid $59.95 + Tax
BT-11 4 AA battery case - paid $17.95
SMC-33 Speaker/mic.with remote controls - paid $59.95
I have all the boxes, manuals etc.
I would like to get $290 for everything!
That's way less than I paid plus the tax!
It's all mint without a scrach - I did the
CAP/MARS mod.
I can take pictures if you need to see it
but I've used it about 10 times and charged
the battery about twice.
I'd like to send it U.S. mail COD if possible
as I live close to a Post office.
Tom Seabury - KI6O

remove the rubber grip by sliding it off the front of the dial, then losen the screw on the dial. I'm pretty sure it is a hex head.

They will also come to a residence (they do that here on the rare occasions when I have a recipient's pick-up tag). Absent a pick-up tag, all you need is the exact weight, a check for the exact payment, and the completed paperwork. For a one-shot deal I usually have problems getting all three.

When I had a business office I had a FedEx account for documents with the drop box in the building lobby, but I got most of my package deliveries by UPS.

There are two screws behind the tuning knob, but it's not necessary to
remove the knob to remove the front panel You can remove the knob by
inserting the appropriate size Allen wrench into the hole in the knob.

NC State University here in Raleigh has wired the entire residential campus,
RESNET, along
with the entire campus. A story in the paper reported that they ran enough
cable, including optical,
to go from Raleigh to Florida and back !

I think this bpl is a ploy to trash the bands so they can sell them off to
highest bidders
once the tv stations move to digital and leave the hf bands.

There is no broadcast television in the HF bands. Channel 2 is 54-60 MHz,
low VHF... but that part of the band (up through channel 5) is also within
the scope of BPL frequencies..

Look in the Yellow Pages for a store that sells packing and shipping
materials. In my city, that would be Office Depot, the Container
Store, and a few other places. A lot of the rental storage facilities
also sell boxes and stuff.

You can buy cardboard boxes, tape, plastic packing pellets, bubble
wrap, etcetera, yourself, and pack each piece fairly inexpensively.

Then take the boxes to UPS, yourself, and send them off. You should go
to the web site for UPS. It gives you the box sizes that are
allowable, and you can enter the shipping and receiving zip codes and
get an exact cost for shipping, beforehand.

This is a lot cheaper than going to Mailboxes Etcetera. They have to
mark everything up to make money.

In order to get to the push buttons you're trying to work on, you have to remove the face panel which swings down from the front of the rig once you remove the necessary screws. You might find it's a little rough going cuz things are pretty tightly packed in there. I've been in there to replace the meter lamp twice in the past 15 years and it's tight.

You'd do well to see of you can locate a service manual. It'll make the task easier. I learned the trial and error way to get in there.

Ups the real story....

UPS sends all parcels to Louisville KY, to a place they called HUB 2K... The place is huge and mostly run by computers and conveyor belts (at One point I counted 14 stacked on top of each other and running in every direction) The conveyors do a number of things, like scan packages on all 6 sides, and dump and bump like you wouldn't believe..

A package comes into the hub on a huge cargo plane.,,, A device called a K-loader unloads two huge air cargo containers at a time (oh and they have to use a jackstand at the rear of the plane as they unload or the plane could tip over) The container is set on roller plate (6 inch casters turned upside down) that allows anyone to move these huge containers with ease. The air cargo containers at locked in place in front of a movable belt that the employees (pretty much the only folks there) move (read toss) packages onto.... Heaven forbid your package gets on the bottom row of these containers. From there is off to the maze of belts and chutes where more employees repack your stuff into different air cargo containers.... The place is huge and busy.. How do I know I used to work for UPS (in phx) and have seen what and how they do business. Needless to say I use only FEDEX ground....

Oh and good luck with insurance claims (the horror stories I used to get when I mentioned I was a UPS employee... wheew .....)

This are my opinions only.... Make your own choices of carriers...

Is CW just FM without an audio signal? So, If I have a FM receiver, can I install a CW audio filter and pick up CW. Such as... an IC 207H or BC 780xlt and a Vectronics CW Audio Filter. Thanks
Matthew

I have the instructions to the original CL-33 before they made more
pieces so it would be UPS shippable. Which one do you have?

Thank you to everyone for good ideas and horror stories. I thought I would post a follow-up to my original post.

I have all three boxes packed and ready to go. Based on the anecdotal evidence you all presented, I am going to try FedEx ground tomorrow. But before I walk in there with my packages, I thought you might be interested in what I have in it already.

I know that as soon as I send this, someone (or more than one) will immediately reply with one of those, "NO! You should have done it this way!" messages, but I had few other choices. I'm just a regular guy that has to ship a few things.

I purchased at Staples:

(3) 18" x 18" x 18" boxes : $8.00
(3) 30-foot rolls of bubble wrap: $29.94
(4) 2 cu. ft. bags of packing popcorn: $27.92
(2) rolls packing tape: $5.30
+ 8.25% sales tax in L.A. county

That's right, $77.03 just to pack this stuff up. And I didn't even double-box it as some of you so adamantly suggested. Instead, I quadruple-wrapped everything in bubble wrap and floated it in a bed of packing popcorn.

I did not pass this charge along to the buyer. He is paying for shipping, though.

$77.03 represents 34% of my selling price.

I am not even counting the two trips to Staples nor the three hours in my garage lovingly packing it all up.

I learned a lot on this transaction. I really don't believe that it is worth shipping equipment. The next time, I will try to find a local buyer. No wonder the prices on e-Bay are so high.

Thanks again to everybody.

Al

It would be very difficult to achieve sufficient input to output
isolation to repeat on frequency so either do time division (lots of
latency) or translate to another band (most likely).

Guess these repeater units would be very vulnerable to any non
linearity that causes I.M. or harmonics from the output to occur at
the input frequency.

The more I think about this, the more convinced that the BPL lobbyists
have excellent P.R. and are first division bull shit merchants but are
totally and utterly clueless when it comes to R.F.

Expect a few systems to be deployed before the money folks from Wall
Street realize that BPL won't work. Trouble is that a few badly
maintained systems could trash the whole of H.F. during the next
sunspot maximum. Reminds me of the pager transmitter on the next hill
to me, wakes up once to twice a day and overloads my 2M equipment.

I couldn't say. I bought mine when they first came out (the original Pro, not the Pro II). It's been used almost every day since then, both at home and mobile, and during field day contesting. It has always performed superbly. I wasn't aware of any "bug" issues with the rig. Perhaps it might relate to "pilot error" ?

FM receivers are designed to not respond to amplitude variations. CW is about as pure an example of "information conveyed by variations in amplitude" as one is likely to find. To cut to the chase, what you propose won't work.

That being said, one can send Morse in a format receivable on an FM receiver, but it'll be MCW rather than CW. Feeding a keyed audio oscillator into an FM transmitter will produce MCW. The caveat here is it is legal here in the states only from 50.1 to 54 MHz and above 144.1 MHz.

Oh man, no offense but you could have saved about $75 just by picking up some old boxes and packing material. No doubt your stuff will arrive safe and sound but its easy to see why you are upset.
I buy and sell on a somewhat infrequent basis and have learned to save all the good boxes and packing material so I don't get hit with this kind of expense. At those prices it seems I have several hundred dollars worth of popcorn stored away in garbage bags :-) ...and never have had to pay for it.
Good luck with the remainder of the transaction.

Hello

> So, If I had a receiver capable of AM reception, then a CW filter would
> work?

No, then you will need a beatoscillator.

No sound is transmitted when you use CW, the transmitter in only turned
on and off, so on a AM radio you only hear an interupted carrier and no
tone.

>propose won't work.

Sure it will! Open the squelch up all the way. You'll hear the
background noise from the band and/or the front-end electronics when
there's no carrier being sent. When the OM at the other end keys up,
the FM receiver will lock onto the carrier, and happily demodulate the
(nonexistant) sidebands - it'll go silent. No CW filter needed... in
fact it'd make the noise/silence difference harder to hear.

Admittedly, trying to copy "negative noise" CW is likely to be a real
hassle at first, but I imagine that one can train oneself to do it
(just as one can train oneself to read a book held upside-down).

For _conventional_ CW reception, you need something rather different.

;-)

Well on the TS-830S it is a DIN type connector (so suspect the TS-820S is likewise) which should be easy to find.

If you mean the jack on the rear panel of the TS-820S is mangled , hard to imagine it being mangled, however if damaged, it may be shorting out a voltage or signal and I would NOT fire up the rig until you are sure that there are no shorts.

What is mangled ??? -- the jack on the rig or the plug on a cable.

By jumper -- guess you mean CABLE that goes between the VFO and the TS-820S,

In the TS-820 manuals -- there should be pinouts and a local cable maker (phone book) or Ham or you can fabricate one. Not too difficult to make one -- you will need an extra pair of Hands and a magnifying glass -- easy on the solder and CHECK FOR SHORTS when you finish.

Kenwood may still sell one.

Get a fellow ham to help ID the connector type OR I suspect it is the manual.

No Manual? See URL: http://ac6v.com/manuals.htm

Good Luck

>By jumper -- guess you mean CABLE that goes between the VFO and the TS-820S,

The jack on the rig is all pushed in and, well, mangled. I wish I could publish a picture but no access. Actually, in the manual it shows a jumper plug for the jack if there is nothing being used there i.e. vfo, amp, etc. Thanks for the suggestion. Does Kenwood still service these? If so, there is a service station right by the house. Even better, I will call them. Thank s again.

>What is the best mobile HF, VHF/UHF rig out there at the moment.

FT-100D. Comes with a cw filter. Get the AM filter if you do any AM work, and the ATAS auto antenna (tunes itself).

hi,

sent you email direct but here is info too

http://www.kenwoodparts.com for the vfo plug e05-0901-05

socket is common 9 pin tube type any hamfest.

just jumper pins 8+9 and that passes the vfo signal back to the rig

For small light items (10# or less) Priority Mail can't be beat, unless you have to insure it for a high value. Do buy the delivery confirmation, however. Fedex Ground generally beats UPS, but check the UPS site. I have found that my lowest costs come by scheduling a "1 time pickup" at my residence, actually get better rates that dropping off at their customer counter! YMMV

No, with AM reception, you'll just hear the CW signal as a staticky,
hashy sound. You need a receiver with a beat frequency oscillator, a
BFO, to receive CW with a nice tone.

The CW filter has nothing to do with receiving the CW signal, other
than narrowing the bandwidth to cut out interfering signals.

Don't know 'bout that, Dave -- it only took me about four days to learn
to read upside down once I thought to try it. I was able to read right
side up pretty well first, though.

> work?

Max and Bob both mentioned a beat frequency oscillator. This is necessary to hear CW on an AM radio. You might beable to loosely couple an external oscillator to your AM radio and have it beat against the IF. The oscillator will want to be 800 Hz either higher or lower in frequency than your last IF.

If you have ever used harmonics to tune a string instrument then you have heard beat notes in operation. When you pluck the E string on a guitar while you're touching the string over the fifth fret then pluck the A string while you're touching it over the seventh, they should both be vibrating at the same basic frequency. If they're not, you'll hear the guitar go "woooOOOOWWWWWWOOOOooooowwwwooooOOOOWWWWWWOOOOOOooooo", and the rate at which the "wow"s get louder and softer is the difference in tuning between the strings. A CW receiver -- or sideband receiver, for that matter -- does the same thing except at RF instead of at audio frequencies.

Isn't that the truth Bill, remember the RCA Victor the wife had packed and
sent to you? You sent it back even better. Still have the box and all the
'cut out cubes' that were in between and against the tubes.

*Got all of it still. BTW Bill, that RCA is next to my bed hooked to an
awful lot of wire now. Gotta be over 700ft. it really hears at night on the
BCB and the shortwave bands. What impressed me is how well it hears on the
BCB 'during the day'. I have logged a station from Wyoming on that piece,
can you believe it...lol.

OK, I'm done. ;-)

Hello,

I am selling a Superantenna MP-1 with an extra "brand new" center coil section! Antenna comes complete with "C" clamp base, tripod base, standard top whip secion and also the mobile kit with solid steel whip and base extention section.

The extra coil section is mint, never used. With a couple of cheap replacement parts from SuperAntenna, you could easily have "TWO" of these fine antennas!

Please send e-mail for pictures!

$140.00 shipped cont. US.

1671. IC function generator issues

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-24 09:10:39 UTC
From: tstimac01@yahoo.com
Message-ID: <59eb326f.0307240110.25548a01@posting.google.com>
Source record: 28246

I have XR2206 function generator IC. Output frequency is is determined by capacitor and resistor. Documentation is clear and test circuit simple. However i cant reach 1 MHz. !! I can't reach above 860 kHz. Component values are exactly as they need to be for 1MHz.

Ok, i thought that maybe the resistor is low tolerance so i replaced it with another one. No change. Then i bought another capacitor. No change.

Then i went into building generator for low frequeny for 20 kHz with same IC. But instead of 20 kHz i got about 18.5 kHz.

Somehow output frequency of my IC is always about 0.8 of the value it should be! Does anyone know what would be the source of this problem ?

As i said only two components determine the frequency. I bought high quality resistors and capacitors.

Thanks in advance!

What's your R and C?
Any parasitic capacitance or inductance (long wires) in your setup?

Markus

XR2206 datasheet: Maximum Operating Frequency:
minimum 0.5MHz (that's what the manufacturer guarantees)
typical 1.0MHz (that's what an "average device" will reach with C=1000pF
and R1=1k). This means the spread is not primarily in your R and C but
in the IC itself! If your design _must_ reach 1.0MHz and you don't have
hundreds of ICs to select from, I would not hesitate to reduce R and C by
5...10%. This will increase your f_max by 11...20%.

Markus L wrote:
> What's your R and C?
> Any parasitic capacitance or inductance (long wires) in your setup?
>

Hi !

R is 1k, C is 1nF, That would make it 1Mhz. But no way. So i tried in reducing C to 500 pF to increase the frequency. I think i got somewhere close to 900 kHz. Strange.

Power supply +9/-9 V (made from two 9V batteries connected together in serial). Maybe here is the error in my setup, since what is described in schematics as GND i connected to -9. Will try ti change it, but i doubt, since IC wouldn't work anyway if there is a error in voltage.

Talking about wires. Well, this is all made on bread board. So there are 6-7 wires, but they are just 1 or 2 inch long.

Should i throw this XR2206 to trash can ?

What ever i do, frequency is always 85% of what should be.

Join the ARRL, and then go to the online reviews of the Icom 706mk2g,
Yaesu's ft100d, ft857, ft897 and the Kenwood ts2000 -- the black box
version of the latter, for mobile.

What's best is what works best for you.

I sold mine too and don't remember anything in the manual about 220 VAC.
I very much doubt it, but consult the manual. I won't ask you why, but
you might think about another transformer with the same voltage only
with a 220 primary. Should be fairly easy to find. Physical size may
be the big item.

Anyway good luck

Not true. Passing the bar is ONLY required to interpret the law for
someone else. And why is that? Because lawyers made it so. It's
nice to make the rules that prevent competition, and then have
someone else with big guns enforce your rules.

> If I want a contract, or any other legal document, to actually
> say what is necessary (as an example of when a lawyer is
> useful), I'm certainly going to actually have a lawyer look at

And why do you feel that is necessary? Because other lawyers are
out there to twist and tangle what should be clear meaning.

Lawyers have taken over and stolen the law from the people it was
intended from the beginning to serve.

I have had good results using epoxy to glue a nut to the sheet metal
behind the hole. Clean well the sheet metal and the nut, a bit of
roughening with file is usually good, and epoxy it on. Make sure
there is a nice fillet of epoxy around the nut for extra strength.

I've also soldered the nut on, but I'll do whichever seems easiest
as the time and usually epoxy is it.

i am in need of more rohn 25 tower, doesnt have to be perfect, just decent, and safe.....
i have the following to trade, and might can drive around 100 or so miles to deliver/pickup....

for trade:
a heathkit dx-100 AM transmitter, working perfect, havent taken pic of this one yet.

a hammarlund hq-100 receiver, works good, and i have pictures.

2 or 3 eimac 4cx1000k tubes, with eimac info, a deal is in the process for one or two of theseso contact me if interested.

a sure 444 desk mic, wired for kenwood, in great shape....

a dentron dtr-1200L hf amp,VERY RARE FIND!
i have used this as a play amp for projects, i have all the original stuff , it originally
had 2-572b's in it, right now its ready to go as a single band amp, but it has no tubes, cause a "buddy" borrowed them and messed them up, i beefed up the power supply with larger diodes, now it has the power supply of the clipperton-L.

a D&A hornet 10-40mtr 100 watt tube type amp with sweep tubes.

a sonar 10 mtr amp, tube type at 100 watts with ubes.

a murray 20 horsepower twin cylinder industrial riding lawn tractor with automatic transmission, and good tires, good shape, i use it weekly, buts its just too much for my little yard i have now, was over $1400.00 a little over a year ago at the local home depot. and am looking to sell it at $900 cash, or $1000 trade.

ALL of its parcels? The last five shipments that I have received
and/or sent have never been east of the Mississippi River, and
even those from "the East" never got anywhere near Louisville.

Or is the tracking record lying to me?

Nah, it's not lying as far as I can tell. Ground shipments seem to go
direct, pretty much... they arrive too fast to have been shipped to
Louisville unless they were sending 'em by air rather than by truck.

Now, it's quite possible that packages which are sent next-day-air are
shipped to one or more large dispatch hubs, and then shipped out again
from there. I recall hearing that Federal Express used this approach
with its overnight-delivery service... they'd fly everything back to
one big hub (arriving by late evening), sort it, and fly it out again
to the destination city in the wee hours. This approach probably
required a lot less individual airplane routes than would be required
to allow for direct city-to-city shipment.

I know they don't send "all" parcels to Louisville.. they certainly don't send local shipments there. We used to get Double O Electronics to ship to us in Newberg same day all the time.. if we caught them early in the morning, before pickup, we would have the parts that afternoon, around 2:30 or so.

This was a key part of FedEx's original business plan for overnight
delivery. I heard that the founder of FedEx got a "C" for this plan at
the Harvard B School, but I'm sure he's gotten over it.

Happy trails,

I remember those things from my radio/tv production days, about 15
years ago -- you might try some local sound studios that have gone on
to bigger & better digital setups; they might have an old aural
exciter around just begging to go.

Perhaps they were referring to "their" local hub. Our hub just happens to be New Stanton PA. I track all packages when they leave here and not all go the same route. I've never taken the time to track Postal Shipments.... I do know the one time I did, it showed a point within the City of Pittsburgh. But that package was going North East. It would make sense... Not sure if the mail went from the city to a plane or what....

As to shipping costs, packaging yourself saves bundles. If you look around, you can find supplies to do the job. Also, when you GET packages, save some of the stuff (boxes, foam, etc) for future use. For bigger boxes, go to some of your local stores. Some will give up boxes, some won't. Appliance stores can be a good source. The box can be bigger, but you don't want it too big. Just enough room for some packing on bottom, top and sides. If the box is too high, cut it down and fold it in. The flaps will also add cushion to the top. There are a few stores here that sell shipping tape CHEAP. $1 a roll, usually enough for a few packages. On some occasions, I use Masking tape as well.. It is $3 a roll, and again, enough for several packages. Newspapers - if you or your family or neighbors read them, save some. Supplies to ship do

NOT have to cost a bundle! As to rates.... SHOP.... In my business, I do a lot of shipping. Often I find either UPS or Postal to be cheaper than the other. Depending of course on the size and weight AND destination, sometimes the difference is anywhere from a $1 to $5 or more. If only a $1 to $5, you must consider this as well... If you have to travel any distance to a UPS site, would it be worth the $1 - 5 OR just as convenient to go to the nearest Post Office? That has to be a personal decision. I pack the unit, weigh it on a scale and insert the dimensions "to the nearest inch". I've often been right on the money but not more than $1 off in my figure based on scale accuracy compared to the scale at point of shipping.

I've NEVER had a problem with a lost or damaged shipment to date with any of my shippers, contrary to others who seem to have developed a hate for one or the other for claims of such. PACKING is a HUGE issue here. IF it is packed well, it should survive most anything. I've sent some rather heavy items out and still, they made it with out incident. In those cases, I've double to triple boxed them. Yes, it adds a bit to the weight, but if you want it there in one piece, a little extra is what it is going to take. IF you're willing to buy or sell an item of value then why cheap out on the shipping to get it there????? PACK IT TO ARRIVE IN ONE PIECE - Then go on line and get the cheapest quotes you can find. Packing and shipping is NOT rocket science. I've seen many many complaints of shippers damaging goods, losing them, and the cost thereof to ship... MAYBE if I have a problem I'll see the other side of the coin. To date, I have not and therefore do NOT see what the big deal is.

The ONLY time I ever "supposedly" had a package lost, was in shipment to me... I paid $150 for it with shipping... It never arrived. I called the company I bought the item from. They said it was shipped, but they could NOT provide a tracking number even though they said they kept such records. They couldn't find it. All the sudden, it was the "shippers" fault for not giving them a tracking number for their files. NAH, I don't think so. The item was also supposed to be insured, again, they had no "receipt". Hmmmm. I told them, if I did not receive the item in 2 weeks tops, I was going to file charges. It took 3 days, I had a certified check in the mail. Payment in FULL. I had already looked up the State Attorney General's web site for that company, sent them an e-mail and forwarded a copy to this company.

I had one other occasion... A man across the country from me, bought an item from me on E-Bay. He said he sent payment out lets say for example May 25th 2003.. "I" should have seen that Money Order in 3 days - usual mail time for cross country to me... I waited a week and a half. I told him it didn't arrive. Right away, he accused me of ripping him off. I told him to have it traced if he desired. He said ok, we'll see who's signature appears. Well as it turns out, the Post Office requires 30 Days before tracing. ON the 30th day, believe it or not, I DID receive the envelope. True to his word, the MO was bought the day he said. Was it mailed that day????? The stamp on it suggested otherwise. Was it in a mail box all that time, then dug out, stamped and put in system??? I don't know.
But I did take a picture of the envelope with the cancellation stamp showing and e-mailed it to him, then placed the item he bought, in the mail. SO,

what I'm saying is, honesty counts a lot and if payment was actually sent. "I" ALWAYS offer to send an e-mail picture showing the receipt of a Postal MO, copy of a check to that party, whatever. If it will cover MY ass, I DO IT. It IS worth the effort. I've learned not to leave anything to chance. I go by Murphy's Law when doing anything. It saves me more time than not. AND aggravation in the end.....

The only other problem encountered was a shipment from Alaska..... It took over a month to get the package. It took 8 days for the MO to get there. They must use dog sleds or something. Not sure of the problem, but mail from there in "package form" SUCKS for time. At least in MY case.

It boils down to packing, cost analysis for shipping, honesty of the shipper and buyer, clogs in the system!

I hope this has helped.

Hello,

I am looking for a "telephone patch", or something similar. I'm not into radios, and the application has nothing to do with radios, but I got the advice to ask here.

I want to be able to record a telephone call and on the same time myself provide the input signal (rather than talking into the handset). The reason is that I want to record a telephone call where I also can process my own voice when speaking, that is, speaking into a microphone, process the sound and then send it to the phone.

Some device with one audio connector in and one audio connector out would be perfect, and also of course some connection to the telephone, maybe to the headset connector.

There are simple and cheap devices where you can tap the conversation through an ordinary audio connector (less than $20), but I also would like to provide the input signal through a connector.

I am hoping to find something simple and inexpensive - preferrably less than $50. I am not into electronics so I won't be able to build anything myself; I am looking for a product to buy.

Thanks in advance.

Source record: 28143
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur

A Phone patch will give you an 8 ohm input and a (usually) 600 ohm output on the "radio" side, and a telephone connection, usually level protected on the other side.

A Hybrid phone patch, (which is what most but not all amatuer phone patches are) will let you tranmit and recieve to the phone line at the same time. It provides a Null adjustment to cancel your signal back to you.

There will be a level meter on the front, as well as gain controls so you don't over drive the phone line. When you set the service switch on the rear, the meter is used to adjust the null.

Due to an old requirement to keep a record of phone patches made, many of the units have an output connection to go to a tape recorder.

You can find them on Ebay for under $50. The units for older radios will have a different impeadence for the microphone side.

Message-ID: <bfs9sqfin0@208.239.203.30>
Source record: 28145

Icom IC-781 Transceiver. The IC-781 was probably one of the best Amateur Radio transceivers ever built. There is plenty of web information on the 781's specifications. This radio looks an works perfectly. Because of its age there are a couple of light scratches on the radio, but they do not detract from its overall appearance. Electronically it works perfectly. The auction includes the rack handles, power cord, and service manual. It will be shipped in the original container.

Yeah, that's right. I was on an extended assignment doing a long consulting gig for UPS in the mid-90s. UPS is the nation's fourth largest airline, in terms of number of aircraft. Once everything is flown in and sorted, it goes out of Louisville in an incredible event known as the 'Midnight Flight' or some such thing, wherein in the middle of the night, plane after plane takes off for its destination. It is a sight to behold. You stand there on the tarmac and you watch endless takeoffs that go on for *hours*. Endlessly. In the middle of the night. It is surreal.

If you look on my website you could see that the NOVA was the unregisterd
version.
I trie to collect many intresting software, some told me that they were glad
that
my website is a littlebit all in one, they told me that it saved some time
to search, and they
discoverd other software that they didn't know about it.

Be glad that many software is to find on other home-pages, if the server
from the
official site does not work (or verry slow with to many downloaders) you can
get
it somewhere else!

If you know some other (good) software witch is not on my website let me
know!

It is a copy-cat of FedEx who has been doing that from Memphis for
several decades.

But the motive still holds. Have you noticed that the ARRL is
collaborating w/the bpl providers to place the interference on SW bands,
where it will have 'optimum' impact on AM transmissions, rather than
placing it on VHF bands, such as 6 metres, or the FM broadcast band,
where the interference would have less of an effect, in relative terms?

Obviously, such a strategy will help to clear out the low-rent tenants
currently cluttering the U.S. SW spectrum, so it can be gentrified for
a better class of paying customers. On the ARRL website there's an
article of one use for BPL which explains why they aren't designing
asymmetry into it: the ability to hook appliances into the web. You've
probably heard of Coke machines hooked up to the internet. Imagine
a frige that can read the RFId tags of products inside it, and can
transmit that data to your local Safeway. They wouldn't want to
restrict uploads for those kinds of uses.

There are also trucking companies that want to get exclusive use of
HF spectrum to track their shipments.

Great. If you could now only work in Roswell, grassy knoll, Elvis, moon landing hoax, the CIA and the Jews, you'd have it made.

BPL is bad enough without idiotic conspiracy theories.

You must be a lifetime member of ARRL, eh? And you would snip the
reference to the article at ARRL's site on other uses for bpl,
giving details on how it is collaborating in the bpl effort, eh?
It 's typical of scum like you to make such an attack, since you are
too lazy to look up the fact that there was a coke machine on the net,
the 1st one in Pittsburg. Glenn Hauser had a report on a trucking
company testing HF tracking (or perhaps a reference to Kim's show,
when it was still on VOA). It's nice of the scum at ARRL to give
free consulting services to those who have more than enough time &
money at hand to trash the SWL bands.

1734. Help with TS-930S Power Output

Recently acquired a nice TS-930S but I suspect a previous owner had turned the RF power output down somewhat as I only get between 80-90 watts out of the rig. I believe the rig is rated at 230 watts input and have been told the RF output should be around 130 watts. Can someone tell me where/what pot to adjust to increase the RF output ? I did not get an owners or service manual for the rig. I have ordered an owners manual but suspect it will be some time before I get it. Any help would greatly be appreciated.

Message-ID: <pkvUa.80961$R92.18013@news2.central.cox.net>
Source record: 28058

I have for sale a nice Drake TR7 Transceiver and PS7 Power Supply. The TR-7 is a late one, SN 9283. It is loaded with all filters including the wide and narrow SSB filters, the CW filter and the hard to find AM filter. It has the non sticky cabinet which is very clean. This transceiver has been completely gone through in March of 2002 by John Kriner, The Man Electronics. He installed the latest mods including the Static Discharge mod and the mod that enables transmit on all bands including the WARC and 60 meter frequencies. He installed new bluing for the meter and PTO and other parts necessary to bring the rig up to 100%. He also performed a complete alignment. Documentation of this work in included. The PS7 works great. It has a small light installed on the front panel that glows red when the PS is on. Fans are installed on both the radio and the ps. This is a nice, clean transceiver.
It is equivalent to a TR7A except for no noise blanker. Original Manuals are
included. Price reduced $50 to $625. Thanks, Charlie Hugg, K5MBX

Maximo Lachman "wrote":

> You must be a lifetime member of ARRL, eh?

And you must be using Madame Cleo, because your psychic readings are
worth shit.

> And you would snip the
> reference to the article at ARRL's site on other uses for bpl,
> giving details on how it is collaborating in the bpl effort, eh?

And you would completely and intentionally misinterpret the ARRL's
anti-BPL position as the opposite, implying they actually "collaborate"
with the BPL industry in some huge conspiracy that is clear only if one
wears an aluminum foil hat.

> It 's typical of scum like you to make such an attack, since you are
> too lazy to look up the fact that there was a coke machine on the net,
> the 1st one in Pittsburg.

It is typical of a conspiracy theory nut like you to invent all kinds of
government conspiracies that have no basis whatsoever in reality except
for people who buy a shack in Montana and arm themselves to the teeth
for that inevitable day when the UN-based world government (ATF and IRS
included) tries to knock down their door and suppress their "God" given
freedom to be stupid.

> Glenn Hauser had a report on a trucking
> company testing HF tracking (or perhaps a reference to Kim's show,
> when it was still on VOA). It's nice of the scum at ARRL to give
> free consulting services to those who have more than enough time &
> money at hand to trash the SWL bands.

Glenn Hauser, Kim, Hewey and Dewey, Ben and Jerry, who the hell cares?
Your so-called ground-breaking earth-shattering Pittsburg (sic) Coke
machine is a red herring. Internet appliances concept has been around
for years. You have yet to show just how is "ARRL collaborating w/the
bpl providers to place the interference on SW bands".
You have yet to show just how "such a strategy will help to clear out
the low-rent tenants currently cluttering the U.S. SW spectrum, so it
can be gentrified for a better class of paying customers". Who are these
phantom paying customers who are taking over SW? Trucking companies? Do
these trucking companies have a secret anti-BPL filter that they will
deploy once they take over SW? Another conspiracy?
When you attempt to quote "an article on the ARRL website", it is a

common practice to provide a link so that people can read it themselves, instead of relying on your interpretation of "asymmetry".
You also have to show just how is the ARRL collaborating with the BPL industry in the rest of the world, because there, too, is the BPL placed directly across the SW spectrum. Could it be that this is the optimum spectrum for data transmission over the power grid that is not designed to transmit data? Naaaaah, it must be a (world-wide) conspiracy!!! And the ARRL is in on it!!!

In short, your post is a typical example of a conspiracy nut and it does nothing constructive to help with the anti-BPL effort. On the contrary, it completely muddies the issue while providing the pro-BPL people with the ammunition to label hams as lunatics.

So take your anti-ARRL paranoia to your Freemen CB meeting in your Montana shack and leave it there.

UPS does operate their largest National Hub in KY, but "everything" does not go there. A shipment from say, Boston to Ohio, Fla, or NY will never see KY. There are many smaller hubs that handle this.

This is an SWL version of the SB301 Heath
receiver. I have seen two on eBay and they say that they are "RARE" (guess
I do not know the meaning). The coverage is as follows; 3.5--4.0;
5.7--6.2; 7.0--7.5; 9.5--10.0; 11.5--12.0; 14.0--14.5; 15.0--15.5;
17.5--18.0; 26.9--27.4mhz.
On a 1-10 scale, it is a 8+. It has the manual (copy) and all three filters,
AM,SSB & CW. It is an excellent looking and working receiver!
A money order for $250 plus shipping will get it. If you are interested
please e-mail me direct.
Tnx----Doug ddswl@centurytel.net

1753. How about an amateur trunked network?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-26 22:20:18 UTC

Source record: 28076

I am interested in converting the 440 repeater band to trunking. It would allow more folks, not that we are seeing that much use as it is, on the bands plus allow us to have talk groups that would be either linked or local. In many cases, instead of a number of repeater sites in a county, it would be only one with multiple repeaters on a single tower. Unlike cell phones, there is little need for low power thus multiple tower sites. Having to maintain a single site in each county would reduce cost (if we can get hams to work together, sometimes hams are too "libertarian" thus it is even hard to organize them for pizza and beer).

European police trunking radio is in the 400 to 500 Mhz region which is far better than the 800 Mhz trunking that is being down here in the US.

I think it's fairly normal, and an indication no one has been messing
with it.
A friend of mine had a 930 back when it was a fairly new radio, and he
told me he only got 80-90 watts from his. He was a very good tech and
was able to work on it, so I know there was nothing wrong with the
radio. By running at that level, the signal is very clean. If you
crank it up, it gets nastier, and if you totally defeat the alc, it
will trash out. Myself, I wouldn't worry about it.
You can't tell the difference on the air if you did crank it up. A
small fraction of an S unit. Both my icoms barely do 100w. Many times
only 80-90 watts being I'm battery powered on those radios. MK

fedex ground.

get an 'account' and they bill your credit card. you enter the data online and print the label on 8.5x77 sheet.. drop off at counter.

example: 50 lbs box 24x24x24 Texas to Ohio, $25.

Source record: 28081

Trunking takes away individualism and makes lots of repeater pairs unuseable for those that would like to establish their own repeater system. I'm agin' it.

One repeater in a series of repeaters is used for a data channel, usually subaudible 300 baud data. All radios on the system are assigned digital ID's and are recognized by the data channel's computer and are assigned to groups. Whenever one keys up, the computer assigns all of the radios with the proper code for a given group to one repeater in a form of round up, so that they can hear and talk to each other.

The Motorola form of trunking stays on the same repeater during a given conversation. The EF Johnson system assigns a new repeater, randomly, each time someone unkeys, thus providing some little bit of security in that one cannot monitor with a fixed channel receiver without hunting between key-ups.

Trunking makes the most efficient use of a group of frequency pairs for business, public safety and other government applications, but it goes against what most amateur radio operators envision as their mission and their hobby.

<< I'm trying to decide between the Kenwood TS570SG and the Icom IC746pro.

I realize this is one of those Chevy vs. Ford debates, but would someone care to convince me either way? >>

Javier-

The Kenwwod is either a 570S with Six Meters, or a 570G without. I don't think there is a 570SG.

I think you've nailed it as far as different people having different opinions. Personally, I would prefer Kenwood over Icom, but find that Kenwood has not been keeping up in recent years.

Consider that the IC-746Pro is more expensive than the TS-570. Unless cost is a deciding factor, one might expect the Icom to be better.

One thing I would consider, is whether the DSP operates at the audio level or at the IF level. I believe the Kenwood's DSP is audio only, but I'm not sure about the Icom. Reviews I've read indicate the IF DSP is superior, and that audio DSP leaves a strong background noise that can be tiring to listen to.

1762. CAT-1000 PROGRAMMING HELP...

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-27 07:39:08 UTC
From: "R. Belcher" <randy.belcher@verizon.net>
Message-ID: <wkLUa.8004$FP5.5460@nwrddc02.gnilink.net>
Source record: 28086
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Anyone have suggestions why I cannot connect via modem to a CAT-1000
controller?
Settings are correct on my end and on the CAT end per manual.
I dial out and get the CAT modem tone, my modem answers with its white
noise/racket then stops after a few seconds. The repeater modem tone then
times out a few seconds later. No handshake or connect. I've used the Comm32
and Hyperterminal programs with the same results.
What's the flowchart on this? Could it be a "level" thing on the CAT end?
Any help appreciated.
Randy

> and have been told the RF output should be around 130 watts. Can
> someone tell me where/what pot to adjust to increase the RF output ? I

Adjust VR8 for 110 watts output. VR8 is on the main signal board,
underneath. Locate it as follows: With the radio upsidedown and the
front panel toward you, look to the left of center of the board,
slightly toward you. Locate connector 5 (8 pins). Directly above (away
from you) is a pot. Directly to the right of that pot is VR8. To
verify, VR8 has a pot directly to its right and one directly toward
you.

1764. Help with Amp Keying Relay in TS-930S

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-27 14:41:57 UTC
From: Tim English <te@usol.com>
Message-ID: <a5p7ivk662466vpvmnp258ah8qvi5g9lcn@4ax.com>
Source record: 28089
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Just acquired a Kenwood TS-930S but did not get any manuals with it.
Can someone tell me where I can get a relay output to key my SB-200
amplifier? There are REMOTE and TRANSVERTER plugs on the back of the
rig so I assume there is a relay closure back there someplace. Any
help would be appreciated.

Source record: 28090

HI:

I am looking for 1 ~ 50 Motorola Speaker Mics !

Will pay shipping, and even send you return mailing
lables to make the job easy.

Sabers, Astro-Sabers, SaberSI, Visar, HT1000, MTS2000,
MT2000, CDM / Pro Series, and any other late Model type.

I need mostly the Connector that mates with the housing
(so the cord / Mic head is un-important) so that Custom Cables can be made
for various Race Car teams I support.

I have lots of stuff to trade, or will be willing to buy
outright.

So, if you have a collection of these Older Mics just sitting
in a box or on its way to a dumpster, Please Email me 1st.

Monty

Message-ID: <j1SUa.83622$R92.5037@news2.central.cox.net>
Source record: 28093

I have for sale a nice Drake TR7 Transceiver and PS7 Power Supply. The TR-7 is a late one, SN 9283. It is loaded with all filters including the wide and narrow SSB filters, the CW filter and the hard to find AM filter. It has the non sticky cabinet which is very clean. This transceiver has been completely gone through in March of 2002 by John Kriner, The Man Electronics. He installed the latest mods including the Static Discharge mod and the mod that enables transmit on all bands including the WARC and 60 meter frequencies. He installed new bluing for the meter and PTO and other parts necessary to bring the rig up to 100%. He also performed a complete alignment. Documentation of this work in included. The PS7 works great. It has a small light installed on the front panel that glows red when the PS is on. Fans are installed on both the radio and the ps. This is a really nice, clean
transceiver. It is equivalent to a TR7A except for no noise blanker. Original Manuals
are included. Price $595. Thanks, Charlie Hugg, K5MBX

1770. How to clear a VX-2R memory

Tim -

I believe that the TS-930S uses the MRF-422 RF bipolar transistor (28 volts and 150 watts out for 15 watts in).
Kenwood service bulletins suggest the usage of the "Low Beta" MRF422 (Orange/Yellow)
RF transistor be used in the TS-930 transceiver.

So, you ask, what is this "beta" thing?

Generally speaking, RF power gain (Pg) and Maximum Saturated Power Output (Po) will be higher with "High Beta" parts, however, amplifiers and transceivers using
"High Beta" parts will tend to be less "rugged" and may require additional stabilization (e.g. additional components and circuitry).

Motorola® uses two methods to designate d.c. current gain (Beta) of popular
RF Power Transistors;
"Color Dot" and "Letter Code". (Note: some transistors may not carry the
Beta test code.)
Motorola beta coding (colored dots)

http://www.rfparts.com/tranmatch.html

You may wish to double check the service notes for the TS-930 on the Kenwood web site

I believe that there are 15 Kenwood bulletins for this transceiver model

This problem was posted in 1998 to rec.radio.shortwave but no fix was reported. It surfaced again in the RADIOSHACKDX394 Yahoo group, five years later, with a posting from W1WJB and was found to be fairly commonly experienced. A simple fix has been developed and can be found at http://groups.yahoo.com/group/RADIOSHACKDX394/files/Mods/RF/MW%20%26%20LW%20Sensitivity%20Stabiliser/.
You'll need to join the group to access this folder but anyone can read the message archive. It's discussed under the thread "Sensitivity Loss Over Time".

73, Tom

-------Original Posting-------
From: DesertFox <craig.rommel@hamradio.org>
Subject: DX-394 Owners, Please read ->
Date: 1998/07/09

Just was something I couldn't help but notice......

DX-394 Owners, try this:

1) Set to a stronger local AM MW Station with a consistant signal strength, note reading on the LCD strength meter.

2) Either leave radio on or turn off (but leave that station tuned in)

3) In 3-4 hours (or overnight if you wish) if off, turn radio on (without pressing BAND switch) and observe LCD S-Meter.

--*in my test it was lower, from 9 to 1-3.--

4) Cycle BAND Button through SW, LW, and back to MW, and observe S-Meter reading on that same station.

--*in my observation it returned to 9--

I was able to reproduce this condition in 3 different DX-394's, base, "A", and a "B", [snip]

For Sale a Kenwood TH-G71A.
I purchased this HT from HRO last September "02.
It's in near mint condition.
It comes with the following:
TH-G71A The HT With the stock battery
BC-19 Rapid Charger
BT-11 4 AA battery case

I have all the boxes, manuals etc.
I would like to get $200 for everything!
That's way less than I paid plus the tax!
I did the CAP/MARS mod.
I can take pictures if you need to see it
I've used it about 20 times and charged
the battery about 10 times.
I'd like to send it U.S. mail COD if possible
as I live close to a Post office.

Some knucklehead in misc.transport.trucking is showing off what a real ass
he is in the way of knowledge.

news:bg0o43$jihr8$1@ID-71746.news.uni-berlin.de

That should take you to the proper thread. If not, look for the post from
"mad dog" posted at 9:35 am.

I kid you not, these are his words:

<quote>
Keep the P=IxE formula in mind when choosing a mobile amplifier.
Power = Current x Voltage
or Current = Power / Voltage
P=Power or Wattage
I =Current draw
E=Energy or Voltage
Example: Tommy truck driver wants to install a 1200 watt spurious
emissions generator on his Kenworth with a 12VDC electrical
system. We just learned that Current draw is calculated by dividing
the Voltage into the Wattage so if the 1200 watt cataract producer has
a Input Voltage of 12 Volts then the Current draw will
be.............................
One Hundred Amps (100). Yes folks you read that right,
that is more current draw than most alternators can produce.So please
be realistic when adding accessories to your already marginal electrical
system or you may find yourself playing the "Prince of Darkness"
on a very wet and rainy night.

--
714 Sandpile,
The Mad Dog wavin' good bye

</quote>

He is wrongfully assuming that RF power output is equal to saying
12volts*100amps.
Assuming the rated output power is 1200 watts.
As I have dealt with radios for years, I know for a fact that this is only
an idiot's explanation.
He's big bad mister trucker trying to show off how smart he is.

I have tried to explailn it to him and he will not believe anything other
than what he has written.
So if one of you could come in to the thread and explain how damn wrong he
is, I would appreciate it.

thanks for the time.

If you are blind and need a good talking radio get the 570SG, but if you do not need the talker, HANDS DOWN get the 746. I do not think you need to spend the extra money for the pro. You will have 100 watts out on HF, 6 meter and 2 meters. ALL MODE..
Also you will have a Fishfinder Display. :-)
K5JOE
Had them both, love the 746.

Actually, he's probably low. That would be true only if the efficiency of the device is 100% and most of them are probably no where near that efficient.

So explain how he's wrong, other than that?

He's mixing RF power with line power.
As I tried to explain it to him, if you were to put a voltmeter at the RF connector and keyed down, you would not see 12 volts at 100 amps as he claims.
In order to do that, you'd need an antenna cable an inch thick for the center wire.
Plus the fact, that his theory suggests the antenna is receiving that much juice, would ultimately fry the antenna every time you keyed down.
Standard RF coax such as RG8 does not handle more than a few amps at the most simply for the fact of it's size.
Plus the fact that internal wiring of the amplifier would also have to be capable of handling the extreme amperage.
I don't think circuit boards can handle it.
Let alone any transistors, resistors, or capacitors.
Do they even make a 1200 watt resistor?

I also tried to compare his theory with that of an inverter.
The rated output power is by no means any where near what the rated input power is.
Obviously, to many people just do not understand the bare basics of electronics and radios.

Yon knucklehead is assuming 100% efficiency or doesn't know the meaning of
the term.

So ask Yon knucklehead how one builds an amplifier that yields 1200 Watts
of DC Power into 1200 Watts of RF power ??
Lots of folks would like to know how to do that.

Power out divided by power in times 100 = % efficiency

Oh boy -- lets assume an antenna is totally resistive -- 50 ohms or better
still a dummy load of 50 ohms that exhibits no inductance or capacitance.

Now since Power in watts = I squared R where I is the current and R is a
pure 50 ohm resistance
transpose and solve for I = square root of P over R

I get about 4.9 amperes RF current

now

E=I times R so 4.9 times 50 = 244 volts RF volts

That's what you should see at the antenna. Try that on old knucklehead.

With any inductive reactance or capacitive reactance --- different ball
game.

Gurus check my math please

RF power is not electrical power.
As audio power is not electrical power.

Square root of P or 1200 watts in our case = 34.641
34.641/50 = 0.6928 amps.

E=IIR

(0.6928*0.6928)*50 = 23.99 volts.

Therfor, the wire can easily handle the power.
Use of a calculator helps.
Your theory was correct. The decimal point was not.

1801. keying my Kenwood TS-530s

Icom IC3SAT 220 Mhz Handheld Transceiver. Unit comes with two 9.6v 1400ma batteries. One is brand new and never unwrapped. BC50U base charger, BA-12 Battery Charge Adapter,BC-74A Wall Charger, HM65 Speaker Mike and vinyl radio case. This radio looks like it never left the box. Not a scratch on it. Perfect crystal. Shipped safely in the original box (double boxed).

Asking $175.00 plus shipping

????????????? What kind of power is RF? Magical? At which frequency does
the electric current stop following the laws of physics?

Are you serious? And you wanted *us* to get on that newsgroup and make
asses of ourselves like you just did?

Better check your math and your understanding of the Ohm's law, the
Power equation and the efficiency of the AB class amplifiers.

U= I*R, P= U*I => P= I^2*R or P= U^2/R

=> I= SQR(P/R) and *not* I= SQR(P)/R like you mistakenly claim

Elmer's calculation is 100% correct. The trucker is right. You are wrong.

A reed relay should work just fine, unless you're into QRQ CW. You can
also make one with an opto-isolator. I believe that the keyer line
voltage is negative on the tube rigs. Very easy to measure directly on
your hand keyer and design appropriately.

Just like any other Kenwood HF rig, the 930 is using the 7-pin DIN
REMOTE connector for an amp interface.

Pinout:

1. (speaker out) n/a
2. amp relay common
3. (PTT standby) n/a
4. amp relay transmit (closed on TX)
5. amp relay receive (closed on RX)
6. ALC input from amp
7. +12V DC on TX

I is NOT the the square root of power. It is the square root of (power divided by R) You first have to divide the power by the resistance THEN take the square root.

And E=I x R not I x I x R

Back to Ohms Law --see URL:
http://www.angelfire.com/pa/baconbacon/page2.html

and AC RMS power is the same as DC power. Provided the circuit has no inductance and capacitance and RMS values are used -- see OHMS LAW URL above and URL:
http://www1.jaycar.com.au/images_uploaded/ohmpower.pdf

About now I think you are putting me on, so the old Elmer is exit stage left.

Well the most economical way today would be LTR trunking. The cost of a motorola or EDACS trunked system for hams as a group and for individuals would be cost prohibitive. Maybe in a few years as cities and states change over to digital systems cheaper second hand trunking equipment will be on the market.

webcam online (in my shack) 28-07-2003.

Hello All,

I've installed a webcam in my shack, and you
can see my shortwave receiver.
We are listen to you (see the freq. display).
Sorry I can not transmit cause my license does
not allow to transmit on HF.

I will publish the stations (I've heard) on my website.

My countrie is Holland (JO33AD).

Have anyone a good idea to put the audio also
online?
Wich software do I need?
Can I do that with my receiver-speaker output to
the line-in from my soundcard?
It's a littlebit the same idea like the police scanners
online (live).
It would be nice when amateurs (from a long distance) can
hear them selves back on inet (when you transmit).

Yes this has been done before quite a number of years back. A guy in Finland was one of the first with a remote control receiver. You could log on and tune the freq, it also had audio output. Do a web search for "Java Radio" I think.

I think even my 520 SE had positive 12 v keying. AS noted by another poster, just check the voltage on the key line.

Here is how I do it with my current radio. Although the PTT is shown, the CW key is done the same way. Just make sure you are using the correct pin for the program you are using. SOME programs use the PARALELL output of the PC.

http://user.mc.net/~jdewey/KACHINA/sound_card_interface.jpg

Ignore the "DB25" pin numbers as that is the end connected to my radio.

If the radio has a relay on the keying line (not likely on the CW key line), connect a reverse biased diode across the keying line to ground. This will conduct the relay "magneto" decay and protect the transistor.

Only because that's what The Big Emm and EFJ push them into.

I am a communications regulatory and engineering consultant in the
public safety communications field, and we have two major clients
(big cities in the US) who have told The Big Emm to take their
trunked digital 800 MHz system and insert it you-know-where and went
back to VHF and UHF analog systems at The Big Emm's expense to
avoid a lawsuit on inability to perform per the contract.

1828. Re: How about an amateur trunked network?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-28 18:32:34 UTC
From: dplatt@radagast.org
Message-ID: <viar22f7q5km6b@corp.supernews.com>
Source record: 27901

>Trunking is the future of two way radio, it is what the police and
>public safety community use. We are going to have to do likewise.

The difficulty I see with trunking, for amateur radio purposes, is:

- It would necessarily obsolete almost all existing radios operating in the frequencies converted to trunked operation. Very few amateur HTs or mobiles would have the ability to be converted to the trunked mode of operation. It'd be much worse than the switchover from carrier-mode repeater operation to PL-tone operation.

- It adds to the amount of centralized coordination required - every trunked repeater group, or multi-repeater cluster, needs a centralized command/management processor to handle the trunking assignments in real time. This adds to the complexity and cost of the repeater systems (by quite a lot), and to the probablity of failure in case of a disaster.

Today's trunked radios really aren't good for diddly if the trunking control computer blows a fuse. One of the big advantages of amateur radio is that we can operate with very simple repeaters, or with none at all... the KISS principle applies.

- Trunking does not, as I understand it, actually increase the amount of channel space available. Its real win is that it lets you use a standardized set of radios across multiple organizations, and create "virtual" two- and multi-radio semi-private communication groups in real time (thus improving cross-organization communication capabilities, compared to individually-crystalled single-organization radios).

Frankly, I don't see that this really provides a "win" in amateur radio. Almost all 440 we carry are already capable of operation at all authorized amateur frequencies - we don't have the "incompatible radio frequencies" problem that has traditional bedeviled police/fire/public-safety operations. We can, and do, already operate in the full spectrum of styles from wide-open round-table ragchew, to directed net, to two-way individual conversation.

- In quite a few areas of the country, the 70 cm amateur band is quite heavily populated with repeaters. Here in the SF Bay area it's almost impossible to get a coordinated frequency allocation... they're all in use already. I suspect that the same is true in other major metro areas.

If you're serious about putting trunked operation into place on one of
the amateur bands, I think you'd have a difficult job justifying it,
and getting it past the band-planning and coordination groups. You
might have better luck in proposing an experimental set of trunking
standards for a portion of the 1.2 GHz amateur band... these
frequencies are less heavily populated with repeaters than 2-meter or
70cm, and there are far fewer "legacy" radios using them.

The SM-20 is a much more sensitive mike than the hand mike that goes
with the 706. What you might try is while holding the mike button down
(in transmitt) turn your mike GAIN all the way down to zero and see if
the hum goes away. I'm thinking you may be picking up something in the
room thats making the hum, and perhaps your ears is not picking it up.
Just a thought.

The other possibility is there is a wire broken in the mike cable, like
the shield. Another possibility is it could be close to a transformer
of some type, like the amp or PS?? Try moving the mike around on the
desk and see if it gets worse or better. Are you sure it may not be RF
feedback you're hearing? Perhaps touching the mike makes it
worse/better?

Good luck

I expect that other folks may have experienced muffled transmitted audio from the RS HTX-252. I used my HTX-252 for the first time last weekend, and was told that the audio was muffled although intelligible. Anyone know of a cure for this muffled effect? I think this is a bit different than the observations of low deviation.

I still have a 530s, I tried a 'reed relay' and it jammed up. I was trying to key it with a homebrew 'accu-keyer'. I ended up using a simple transistor circuit. It was a simple NPN or PNP. I don't remember which now. But its still going strong after 20 years.

Your assuming the input and the ouput power are the same, not so. For most amps the effiiciency is about 50 to 60% of the input. For solid state figure 50%. So in order to figure the current needed to run the amp you need to assume a 50% rule. he was only partly right. So you take his answer and divide it by 0.5 and you get 200Amps. That's right folks.

The 570 has a standard Kenwood 6-pin connector, so it should work. If not, the power cord that comes with the 570 will work on the terminal strip on the PS-50.

The 530 has -65 volts at the key input, so negative keying is in order.

This is a one owner unit (45W 2M FM xcvr) and is as original and complete as you will find one. Excellent intermod rejection (not found on today's radios). It includes the optional HM-14 DTMF Mic, an un-opened accessory package (fuses, ext. spkr plug, mounting brkt screws, washers, nuts, power cable lugs, etc., mobile mounting bracket, support bracket. Also, factory shipping carton and all packing, DC power cable, manual & schematic and last but not least, the warranty card. ;-)). $90 shipped/insured Conus.

1848. Re: "Muffled" HTX-252 Transmitted Audio

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-29 03:27:37 UTC
From: fmmck@aol.com
Message-ID: <20030728232737.04816.00000859@mb-m26.aol.com>
Source record: 27921

<< I used my HTX-252 for the first time last weekend, and was
told that the audio was muffled although intelligible. Anyone know of a cure
for this muffled effect? >>

Cal-

I also have one of the bargain HTX-252 transceivers. I had read here about the low audio and expected that would be a problem for me as well.

What I found was that the radio has no microphone gain adjustment, just a peak deviation adjustment, as has been discussed here. Checking modulation, I found that it was working well with no further adjustment needed. It is just set up to REQUIRE close talking to the microphone, and some people prefer to hold it several inches away. The microphone element is located at the top front of the microphone, so holding that spot within an inch of your mouth should give good modulation without having to shout. During my testing I tried a couple other similar microphone elements with no increase in sensitivity.

The only reason I can think of that would cause muffled audio, would be if someone had gone into either the microphone or the transceiver's microphone amplifier circuits, and tried to "fix" it! If you recently purchased yours and it was the last one in the store, it is possible that it had been returned by a previous customer. As such, it might have a factory defect, or it might have been returned because of the failed attempt at improving it. Either way, your best bet may be to take it back to a Radio Shack store along with the receipt, and have them send it in for repair. I believe their technicians have seen most of the problems many times, and should make fast work of a repair.

Per someone's suggestion here, I found service information for the Albrecht AE-540 at http://www.albrecht-electronic.de/service/Amateurfunk/AE540/ which appears to be almost exactly the same as the HTX-252. Following the microphone audio path, there is a 2200 Ohm resistor that leads to the push-to-talk circuit. That circuit is AC coupled by a 0.1 microfarad capacitor, to another 2200 Ohm resister, that connects to the audio processor integrated circuit. I believe some increase in microphone gain would be achieved if that second 2200 Ohm resistor were shorted. However, the frequency response might also be affected. As a wild guess, I would look on the bottom side of the main circuit board for that 2200 Ohm resistor. It is located near a shield as I recall. If you find it has been shorted, try un-shorting it and see if the audio improves.

By the way, I also checked www.mods.dk and found a suggestion to remove a certain one microfarad capacitor to speed-up the radio's squelch response. I decided that it was a better idea to replace it with a 0.1 microfarad capacitor. As far as I can tell, that is the only worthwhile modification the radio needs.

Krack-

As others have noted, it has a high negative voltage across the key line, so it must use grid-block keying.

If you are interested, get a diagram for an old Heathkit HD-10 or HD-1410, and see how they managed the interface. I found both listed at http://bama.sbc.edu/heath.htm. The only unusual component may be a high voltage PNP transistor required to withstand the voltage.

If you have a collection of QST, search for the article on the WB4VVF AccuKeyer published back in the 70s. It provided an interface for grid block keying that happens to work with positive-keyed rigs that can stand a slight offset voltage. For positive keying, the PNP transistor's collector-to-base junction acts as a forward biased diode, so its NPN driver transistor actually keys the rig.

I am looking for something in the same price range.

The Icom appears to have better numbers, and you get 2m. However I am leaning towards the Kenwood. On eHam there are many reports of repairs and no TX issues on the Icom.

The Yaesu 920 is also a possiable however I sent them 2 emails for a simple question and heard nothing? They also removed the phone numbers from their site. What if I ever have a problem and need some assistance?

Thanks for the tips on the 252... I'll store them for future use. I bought 2 of them brand new, never had them out of the box yet. I had set them aside awaiting to use them for a project, then found they weren't able to be used for it. Now too late to return them, as it was past 30 days. ALL have extended warranty. If anyone should be interested in one of them or both, I'll sell em for what I got in them plus shipping.

Elmer's calculations were correct.

Power(P) = voltage (E) x current (I), and
voltage (E) = current (I) x resistance (R)

so... P = I * I * R

and I = square root(P / R)
= sqr(1200 / 50)
= sqr(14)
~= 4.898979 Amps

and E = I * R = 4.9 * 50 ~= 245 volts

RG-58C/U (Belden 8262) is rated at 1,400 volts RMS. The 20 AWG center
conductor of RG-58C/U (Belden 8262) is good for about 6 amps RMS.

I have an HTX-242 2m VHF mobile that was in the proximity of equipment that was struck by lightning. I didn't notice any evidence that lightning had struck the 242's antenna, but my HF rig had definately been struck. The power supply that powered the 242 was destroyed.

Now the 242 is locked in transmit mode. Turning it off and on doesen't help, and using the reset as described in the manual does nothing, the keypad is locked out. Is there anything internal that can be done? It's probably fried but I figured I would at least try.

I would ask RadioShack but they would probably commit it for service and trying to get them to be technically verbose is like asking a cat to read poetry. Is there any fix for this under the price of the radio ($80)? If not I'll just get a Yaesu or Icom.

Yes you can feed audio, i would reccomend you use an opto-isolator or 1:1 trasnformer from the audio out of your radio into the line in on your soundcard (be carefull and check line levels).
The software you can use to broadcast is shoutcast, this will encode the audio into MP3 format to be streamed from any MP3 capable decoder (such as Winamp or Mediapalyer). There is a slight lag of a few seconds (slowly creeps up to 30seconds or so).
You need 1) the client software (a plugin for winamp) and 2) the server software. You can stream from 56k at a low bitrate which is fine for voice. Broadband would be required for multiple listeners though. If you have a dynamic IP address you will also need a way to update a static domain for listeners to point their player to - this can be done at http://www.dyndns.org

the software for streaming is at http://www.shoutcast.com

hope this helps

I have a problem with my MFJ-986

The two 1N34E of the control power and the system of TOS meter have qrt ....two time. I don't know the reason but it is not about too big power or some thing like that....Not in use or in qso. I think it is with statics (when there is a storm, or snow..or ??) I have also put 2X1N4148 and also go qrt...

I have put two 1N4001 but all the measures of power or swr are wrong... I cannot tune the god power. But they have no qrt for the moment !!

Is there anybody who have the same problem ?? And what kind of pin can I put in place of the 1N34E ?? to find again the same characteristic of the MFJ 986 at the beginning ?? and be much powerful than the 1N34E ??

Thanks for your help and excuse me for bad english. I hope that you can understand me !

Hi Frank,

I think you have a problem with static electricity or lightning. The
1N34 diodes are very sensitive to voltage. They will fail if the
voltage gets too high, like with a nearby lightning strike. Best idea
is to unplug the antenna lead when you're not using the radio.

The 1N34 is a Germanium diode. It is used because it has very low
forward voltage drop. You might substitute a 1N60, but probably
better to order replacement 1N34's from MFJ. None of the other diodes
would be suitable, because they are all Silicon.

The HRO store in Salem that the other poster mentioned is the closest
specialty store. See www.hamradio.com

Many companies have no retail outlet in MA, but do have them just over
the border in NH. Sales tax.

Some Radio Shacks have a small amount of ham gear, but the selection
is steadily shrinking.

You-Do-It Electronics in Needham just off 128/95, Exit 19A, does not
sell ham radios, but has a lot of accessory items, electronic parts
and tools, and also books on ham radio. It is a worthwhile place for
hams to know about.

There are also various ham radio flea markets around greater Boston.

Lightning strikes do not always cause damage predictably or visibly.

Many useful documents are available through the RS website, including
some schematics. Use their search engine with variations on the model
number, both "HTX-242" and "HTX242".

You might as well pop the cover and try to fix it yourself. You can't
make it work less, and even if you cannot fix it, you will at least
learn something.

There is a fair chance that the failure of the PS "protected" the
power side of the radio circuit, but it still could have caught a jolt
through the antenna side. Still first thing right away would be to
check the internal voltages on the board against spec.

The RCV/XMIT relay would be one of the first components to check.

Hello Massimo,

I use my ft-817 daily for 1200 packet radio (APRS, BBS and DX
cluster). It works very well. I have cut the wire from an old ps2
mouse and have soldered a DB9 connector for my TNC KPC3. The volume
level from the data port is preset, so you can turn the volume pot all
the way down or not if you want to monitor the audio. The antenna is
an indoor vhf j-pole.

If you have specific questions, feel free to send me an email.

1868. What kind of (2 way) radio is this?

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-29 22:40:24 UTC
From: Toscano <toscano2@ix.netcom.com>
Message-ID: <bg6tnb$4ln$1@slb5.atl.mindspring.net>
Source record: 27941

I picked this up at a flea market from a guy who thought it was a CB, he said he got it out of a tow truck he bought. To me it looks like a trunked radio of some sort, most likely 800MHz judging by the front panel.
The ID sticker is missing but the serial number is still on the inside (no FCC ID to go by) so I am not suspicious. It is a Johnson with a front speaker and sort of sloped front unlike anything I have ever seen (the side with the speaker comes out about 5/8" farther than the other side). Rear has a large heat sink. Radio measures about 2x6x10 inches. Front panel has following controls: power, V, A, S, Volume, System, Group.
Modular-type plug for the microphone (like my Yaesu FT2600).
Curiously the power cord is blue and red wires. I tried this on two different 13.8VDC power supplies and I tried reversing the wires and no matter what they short out the power supply.
Any ideas? Anyone even know the correct power requirement for this?

I have one too. I adjusted the pot on the motherboard and still got poor audio reports. I kept asking and finally got what I hope is a better understanding of what it sounds like.

What most folks are calling "muffled" may actually be a high bass response (or a low high end response)

Asking hams for opionions on audio quality is dubious at best. I've heard a mobile fade almost completely out and get a report of "You're starting to break up" more times than I can count. The same with audio quality. Many hams don't listen that well, and as long as they can hear and understand you then you "sound great"

Seriously Richard my 252 sounds great !!!!
I've listened to it myself.
The key for me was to get the pot up, hold mike 3.5'' away at a 45deg.angle and
to remember the element is near the top of the mike. The tough part is getting
used to talking on each radio a little differently. A ht with a good pair of
hi-fi cans monitoring the input or
simplex is a great tool in getting this one down. Many schematics for simple,
easy to build deviation meters are to be had on the web.

Posted this request previously but no reply. Can anyone help me outy here?
I'm looking for instructions/manual for a Yaesu FC902 tuner unit. I've got
some of the pages but missing the rest, if anyone could scan and send me
them, I'd be grateful.
TIA
JKM

1883. Re: "Muffled" HTX-252 Transmitted Audio

Newsgroup: rec.radio.amateur.equipment
Date: 2003-07-30 13:02:36 UTC
From: caljsi@aol.com
Message-ID: <20030730090236.20257.00000817@mb-m29.aol.com>
Source record: 27956

I'd like to thank everyone who responded to my inquiry regarding the "muffled" transmit audio on my HTX-252! There is a lot of very useful information among those responses. I think I'll try listening to myself first.
FWIW, I'd bought the rig used, and, not being a 2M FM guy, only used it this past weekend on a trip to my 45th high school reunion. The report came from a guy I'd known in high school.
Again, thank you all!

Maybe it is a coffee maker? Actually is sounds like something I saw
which operates around 400MHz vs 800 MHz.

You may have to carefully open the unit and look for damage or
something obvious which may need repair if it is worth it. On the
ones I have seen Blue goes to neg and red to pos.....

I have the following for sale

I have a nice Swan 500 with its speaker/powersupply in excellent condition. Electronicly its a 10 no problems full output almost 300 watts PEP. It will come with manual and a brand new Shure 450 microphone ready to plug and play. Cosmeticily I would rate the 500 a 8 it has a few scrathes on the face but everything else is nice. The power supply is 9. The microphone is a 10. All tubes, knobs etc are working perfect. The radio is used daily and isnt one of the "drifter" type swans. $200.00 Plus ship firm

Audio stuff as package only
All equipment listed is less than 6 mo old. Has sat moslty unused. It is in like new condition. All working and looking perfect. All will come with org boxes packing and manuals. I will throw in a bunch of jumpers also. Behringer Ultragian Pro Single Tube Pre Amp MIC2200 Behringer Feedback Destroyer Pro/Parametric EQ DSP1124P Behringer Modulizer Pro DSP1224 Effects Processor Composer Pro MDX2200 Expander/Gate/Compressor/Limiter I take Pay Pal and Money orders. Buyer pays shipping. FYI I am going to also throw in a Behringer EuroRack 6 channel mix board that has a 3 band EQ built into it also in mint condition same age as the other items. 300.00 Firm plus ship

I would have gave money 10 years ago if the ARRL had advocated dropping that flippin' CW. Now that the ARRL is being pushed from the top down all they want is money. Sounds like another government agency to me.

Yes, this is too little to late. What are the ARRL boys going to do with the
extra money, buy some Senator a whore and put money in his campaign fund? No
thanks.

TCARC Hamfest 2003 Scheduled for Saturday, August 2, 2003

ITHACA, NY The Tompkins County Amateur Radio Club announces the Finger Lakes HAM-IN (hamfest and fly-in) at Tompkins County Airport (KITH), 3 miles NE of Ithaca on Route 13, on Saturday August 2, 2003.

Talk-in on 146.970- AF2A repeater.

Vendor setup starts at 6 AM (inquire for Friday night setup time).
Doors open to the public at 7 AM Saturday morning.
Hamfest closes at 2 PM Saturday afternoon.
Large hangar for indoor vendors and displays.
Drive-in setup.
Paved outdoor flea market and parking.
Aviation displays - fly in and show your plane for free!
Breakfast and lunch served by Boy Scouts.
Admission: $5.00 at the door
Indoor tables: $10.00.
Outdoor space $2.00 each.
ARRL sanctioned event. VE exams starting at 9AM, walk-ins always welcome at
tests.

More info, including a PDF format flyer from a previous year, is available on
the club
website at
http://www.compcenter.com/~tcarc/

Message-ID: <bgb754$n1j$02$1@news.t-online.com>
Source record: 27977

hello

I hope someone can help me out.
I got an used Yaesu FC-20 tuner but the data
cable was not includes.

Please, can somebody be so kind to give me
the correct wiring of this cable, especially
for the PINs 4 and 5 (Data In / Data Out).
Is this crossover or a 1:1 wiring ?

thanks
Bernd

Sorry you feel that way. We owe our ham radio to the ARRL -
they're all we have, all we ever have had, or will have.
Do you think the local CB club is going to look out for our
interests?

The ARRL has to cater to a lot of concerns, whether your operation
is with PSK31 or CW and link coupling.

A little OT, but I worry because we're losing the young interests
to the internet. If you're old enough to recall hearing the novice
bands come alive after 3PM when school let out, you'll know what I mean.

All hardware, with coax matching section. Includes the 12 and 17m add-on kit. Antenna last used during Field Day with no tuning problems whatsoever. Anti-ham condo management forces sale. Would like to trade for any of the following:

Yaesu MD100-AX8 desk mic,
INRAD 6 khz AM filter for Yaesu FT920
HF/6m antenna tuner with random wire capability
W2IHY 2 band EQ

or sell outright for $125 US plus shipping from Ontario
Please reply to my personal e-mail at ve3tmt@yahoo.ca

I also have an MFJ249B analyzer I might trade for ???

Hallo,
sorry for my terrible English.
I program to change (or to upgrade) my 7030 with 7030+.
Are there important differences between two?
I refer to the general quality of listening,
to the IP2&IP3, to the noise.
